December.—The money market for the year up to this time has been disturbed by intelligence, from time to time, from Europe. The events of the war have been looked to with much interest by the people of the United States, and the results upon the markets of London and Paris have created fluctuations here. Every advance in the rate of discount by the Bank of England has had, directly or indirectly, its influence upon Wall street; and, in fact, the effects upon capital and capitalists here have been more apparent in New-York than in London. In the latter, the prices of consols have varied but little, while stocks in New-York have undergone more violent fluctuations than usual. We give elsewhere the monthly changes in our own market; the following are the chief changes in consols and Bank of England stock during the year:

|                 | Consols. |        |      | 1    | k.   |       |        |
|-----------------|----------|--------|------|------|------|-------|--------|
|                 | Hi       | ghest. | Low  | est. | High | st. L | owest. |
| November, 1854, | 94%      |        | 911% |      | 218  |       | 209    |
| December,       | 9314     |        | 92   |      | 212  |       | 2073   |
| January, 1855,  | 92%      |        | 90%  |      | 212  |       | 208%   |
| February,       | 91%      |        | 9034 |      | 215% |       | 212    |
| March,          |          |        |      |      |      |       |        |
| April,          | 93       |        | 885% |      | 212  |       | 210    |
| May,            |          |        |      |      |      |       |        |
| June,           |          |        |      |      |      |       |        |
| July,           |          |        |      |      |      |       |        |
| August,         | 91%      |        | 90%  |      | 216% |       | 214    |
| September,      | 91%      |        | 8834 |      | 217% |       | 216%   |
| October,        | 8834     |        | 86%  |      | 209  |       | 207    |

The closing prices of consols at the close of the last thirteen weeks have been as follows:

| Sept. | 15,   | K Nov.     | , <b>2,</b> | į. |
|-------|-------|------------|-------------|----|
| "     | 22,   | <u>"</u> " | 9,          | )  |
| 4     | 29,   | ¥ "        | 16,         | *  |
| Oct   | 6,    | ¥ "        | 23,88       | 1% |
| 14    | 12,   | ¥ 4        | 30,         | ×  |
| 44    | 19,87 | Dec.       | 7,90        | 36 |
| 4     | 26,   | <b>4</b>   | 1588% a 89  | ¥  |

The transfer-books were closed on the 8th December. Of course the last quotation is for dividend off.

The changes in the rate of discount by the Bank of England during the present year, we now annex, with the cotemporary values of consols, and the bullion held by the Bank:

On the first of this month the Secretary of the Treasury issued a circular in which he offers to redeem the Government six per cent loan of 1842, (due in 1862,) at a premium of ten per cent; and for the loans due in 1867-8, a premium of sixteen per cent.

The month of December opened with a declining market for stocks, from which to this time, there has been but little improvement. The market is still heavy, under the influence of advices from Europe that are considered unfavorable.

The export of coin to Europe has been light during the present month. The reduced rates of exchange on London have been such as to deter shippers from any heavy export, and it is thought that the large shipments of cotton during the present winter months will furnish the market with a full supply of bills on London and Europe.

The foreign exchange market is depressed—money is too scarce at present to make heavy remittances. During the year the rates on England have shown greater fluctuations than usual. We annex the rates for sterling for the first and middle of each month, for bankers' bills.

| January,  | 107% 107%   | July,      | 110 109%   |
|-----------|-------------|------------|------------|
| February, | 109 1091/3  | August,    | 109% 109%  |

# THE HISTORY OF COMMERCE.

# CHAPTER II.

It is somewhat singular that Egypt, a country never remarkable for mines in its own territory, should have been among the first to give an example of mining on a large scale. But the Egyptians had extended their conquests to the southward, where, in the mountains of Nubia, there were extensive mining districts. In these, as in the mines of other parts of the world, masses of ore contained only particles of silver, and the task of raising the ore to the surface was very laborious. This was performed in the Nubian mines with little aid from machinery, and chiefly by manual labor, as is still the case in many parts of Spanish and Portuguese America.

The next accounts of mining in ancient history relate to Greece, where, from the mountainous nature of the country, the mines were numerous, though not particularly productive. They were wrought in Attica, Thrace, and several of the islands. The laborers were paid partly in money, partly in provisions; and the accounts handed down to us by Greek writers show that mining, like agriculture, afforded a fair return for the capital and labor employed, but no remarkable profit. Spain in those times, as at present, was remarkable for extensive mining; as were in a less degree Sardinia, Corsica, and the small island of Elba.

Such undertakings were long carried on for the public account; but towards the fifth century of the Christian era, the Roman government withdrew from most of its mining establishments, allowing individuals to carry them on for their own account. The quantity of gold and silver in circulation appears to have subsequently decreased; but we are greatly at a loss for correct information in regard either to the state of mines or the prices of commodities, as represented in money, during the middle ages.

It is now three centuries since the importation of silver from America, in particular from Mexico and Peru, amounted at first to half a million annually, and increased to one, and afterwards to two millions. This sum was such as to affect the prices of corn, labor, and merchandise generally. It caused a gradual rise of prices, carried to the greatest length in maritime districts, in parts connected with each other by navigation. The published works of the sixteenth century contain many notices of the rise in the price of commodities, and of the inconvenience resulting to the consumers from such rise: the advantages to agriculturists and producers generally were not so clearly perceived, or the humble classes enjoying them had not equal means of stating them to the public.

The supplies of gold and silver from America continued during the seventeenth and eighteenth centuries, and on a much larger scale than during the sixteenth; yet their effect was not so great, for several reasons. First, the number of persons among whom silver now circulated was far greater than formerly. Gold also had become more

common, and began to form the chief, or almost the sole medium for large payments; and, lastly, the use of silver for plate, jewelry, watches, and other ornamental purposes, increased greatly in consequence of the improved circumstances of the middle and upper classes. There remained thus less silver to add to the coin in circulation.

It was in the eighteenth century, particularly after 1750, that the use of bank notes became general in England, and subsequently in the United States of America. This may be compared in its effect on prices to an additional supply of gold from the mine, because its tendency to raise prices is considerable, though not so great as is vulgarly supposed; because bank paper payable in cash on demand, of

which alone we speak, can never be unduly extended.

Bank notes have as yet obtained little currency on the Continent of Europe; but in Great Britain, Ireland, and North-America, their effect on prices may be said to have been similar to that of the importation of the precious metals from America. In either case, the consequence was a rise in the money price of corn, and commodities generally. To comprehend the benefit of such rise, we should consider society as divided into two great parts; the producing and the non-producing classes. The latter consist of capitalists, landholders, or fixed annuitants; the former of farmers, especially tenants on lease, manufacturers, merchants, and, in general, all persons who carry on business with borrowed capital. If a tenant on lease continue to pay during twenty-one years the same rent, while the market price of his crops experiences a progressive rise, it follows that his circumstances will improve. Thus, on the augmented importation of silver from America, which began three centuries ago, there took place a slow but steady rise in prices, the effect of which was of great advantage to agriculturists, in particular to those who held land on lease. The year man who was cautious and persevering thus laid the foundation of a little property, the next generation added to it, and the third rose from the condition of cottagers to that of farmers. This, or something like this, was the course of circumstances in England, during the chief part of the sixteenth, seventeenth, and eighteenth centuries. If the effect was at no time very great, it was continued and progressive; for we can trace no great or general decline in the price of agricultural produce until the general peace of 1814.\*

The trade and navigation of England, unexampled as it now is in extent, did not by any means make an early figure in the commercial

<sup>\*</sup>The effect of a progressive rise of prices in stimulating the productive industry of a people was first started by Mr. Hume, about a hundred years ago, in his Essay on Money. He had seen the effect of this rise in the war of 1740, as well as that of 1758; and a war carried on by annual loans has the effect of raising prices nearly in the same manner as an increased supply of the precious metals. Mr. Hume had also the means of observing, in some degree, the effect on prices of an augmented issue of bank paper. His remarks on these subjects, though not expressed in the language of a man of business, do credit to his reasoning powers, considering his limited means of information on a subject so foreign to his pursuits. How little were such conclusions attended to by Parliament in the discussions of 1819 on the resumption of cash payments, or of 1826 on the recall of small notes!

history of Europe. Of this the principal cause was the thinness of our population compared to that of the north of Italy or the Netherlands, and the consequent insignificance of our towns. Our slow progress in trade is also to be ascribed to political causes, to the civil troubles originating with the great barons, the frequent wars with France, and still more to the long and sanguinary contests of the fifteenth century, respecting the rival claims of the houses of York and Lancaster. It was not till the reign of Henry VII., little more than three centuries ago, that the advantages arising from our extent of coast and abundance of fuel began to be brought into active operation. During the reign of his successor, the progress of improvement received little patronage from the court, but a most efficient indirect aid from the introduction of Protestantism. The advantages resulting from that happy change, and the development of national industry, were strongly displayed during the long reign of Elizabeth, under the wise administration of Cecil. At that time, also, was felt the benefit arising to the productive classes, from the augmented import of gold and silver from America.

We pass over the very questionable, though popular opinion, that the adoption of our navigation laws had a beneficial effect on our shipping. They accelerated its increase; but that increase would probably have taken place to an equal extent, and on a surer foundation, had foreigners been allowed to frequent our harbors, until the course of circumstances gradually led to a preference of British vessels. In all the departments of productive industry which have as yet had a fair trial, interferences and exclusive privileges have been found detrimental to national prosperity; nor does there seem any reason for making an exception in the case of mercantile shipping. Thus, in no department have more efforts been made to cause increase by artificial encouragements, than in our fisheries. Government, desirous of extending these great nurseries of seamen, have granted large bounties, particularly on the vessels employed in the herring fishery; still the result has never been satisfactory, and bounties are now withdrawn from fishing vessels, in the same manner as from exported linens, and other articles of merchandise.

Our navigation laws date from the middle of the seventeenth century; and in the course of fifty years our mercantile shipping was increased to somewhat more than double its amount. But the great period of increase was during the eighteenth century, at the beginning of which the mercantile navy of England amounted to 270,000 tons; while in the middle (about 1750) it exceeded 600,000, and in the end of the century approached to 1,600,000. On the 31st December, 1852, the total number of ships belonging to the British empire, including the colonies, was 31,993 sailing-vessels, and 1414 steam-vessels, and the tonnage of these, 4,080,385, and 223,616 respectively.

Of our national manufactures, woollen was long the most considerable; but it is now surpassed by cotton, the extension of which since the year 1770 has, like the increase of our population, been one of the wonders of the age. Another manufacture surprisingly extended during the last half-century is that of iron and hardware. Our su-

516

periority in the latter, both as to quality and cheapness, is such as to give to our exporters a decided preference in foreign markets.

It is now fully a century and a half since there has been kept at the custom-house in London a yearly register of our exports and im ports. But such returns exhibit a very imperfect statement of the aggregate of our foreign trade; because remittances take place in bills of exchange, and in various other ways, which escape the notice of the official registrar. It has long been the practice of merchants to consider our exports as exceeding our imports; but this has arisen chiefly from the different mode of valuing the two. The truth is, that the sum of our imports is nearly as great as that of our exports; but this approach to equality is by no means a preventive of profit. Articles are worth more in one country than in another; and a gain is made by the mere exchange, in the same way that a nation augments its wealth by the interchange of commodities between its different pro-

The commercial treaty with France, concluded in 1786, was entitled to particular notice, as well for the fairness of its conditions, as for being the first commercial compact, on a comprehensive scale, between two nations so long divided by political causes. The freedom of competition opened by this treaty put to the test the ability of either country to supply the great articles of manufacture. While in silk, jewelry, and ornamental work generally, the French continued to be superior, England had the advantage in such substantial articles as hardware and pottery, as well as in the rapidly-increasing manufacture of cottons. This principally arose, not from the conditions of the treaty being unfair towards France, but from our advantages on the grand points of fuel, canal communication, and amount of capital. Unfortunately the operation of this judicious compact was cut short by the war of 1793. Had the peace continued longer, there is little doubt that whatever was obnoxious in the conditions of the treaty would have been gradually removed, by the mutual accommodations which insensibly take place between nations in a state of amity and free intercourse.

A striking feature in the trade of England, compared to that of France, Germany, and other continental countries, is the magnitude of its exports to distant parts, such as India, North-America, and the West-Indies. These different branches of trade employ a number of seamen, and make a conspicuous figure in the list of our yearly exports. They are considered by foreigners, as well as by the majority of our countrymen, as the pillars of our commercial prosperity; but those who estimate them so highly have no idea of the large sums of capital that have been withdrawn by each of these countries from England. The United States of America consumed our manufactures largely for nearly a century, but in no one year did they remit to this country the full value of the articles which we exported to them. The amount due from them to England has long exceeded the general estimate, and is known only to the merchants, who feel the deduction thus made from their pecuniary means. A similar drain has long been made by our West-India colonies, but in a less degree, until

within these fifty years, since which the capital drawn from England has amounted to many millions. With India our commercial intercourse was more limited; and the exports, confined to the East-India Company and a few mercantile houses in London, were on a comparatively small scale until the present age, during which the extension of the private trade from Liverpool, and the advance of capital on indigo plantations, made our India business assume a considerable resemblance to that with North-America and the West-Indies.

The real and substantial benefit arising from commerce takes place at home, and shows itself in the extension of manufactures, the increase of towns, the improvement of roads, canals, and harbors. In all these England has in the last century taken a decided lead of France, the Netherlands, and every continental state. Happily the grounds of our superiority appear likely to continue, resting as they do on our abundant capital, own formed habits of business, the general subdivision of employment, and the extent of national improvements conducive to useful purposes. These substantial advantages are, it may be hoped, so great as to enable us to overcome the burdens arising from financial mismanagement, and our too ardent interference in

foreign politics.

Of the course of trade in this country during the last half-century, the following is a brief summary. After the peace with the United States of America in 1783, our trade suffered for some time by the transition from war to peace, but gradually improved; and in the years 1789, 1790, 1791, 1792, was decidedly prosperous. After this came the war with France, which was at first injurious to trade, but after the abundance of money consequent on the extended circulation of bank paper in 1797, assumed a very different appearance, and seemed to bring a yearly addition to the national wealth. This ostensible increase of profits was kept up during the chief part of the war, but at the peace the state of circumstances underwent a complete change; the transition was great beyond example; prices fell in every department of business, and the year 1816 was among the most gloomy in our commercial history. A revival of trade took place in 1817 and 1918, but it was succeeded by a long depression. In 1823 trade revived once more; in 1824 it became prosperous, and 1825 afforded a striking example of the abuse of mercantile prosperity; at the end of that year a general fall of prices took place, and afterwards the heavy calls to meet the expenses of the late gigantic railway undertakings, aggravated by the failure of the potato crop of 1846, occasioned the greatest difficulty in procuring pecuniary accommodation, and led to the crisis of 1847.

From the ease with which money was borrowed by the government of this country during the eighteenth century, the wars we carried on were both of frequent occurrence and on a scale of great expense. The result was a continued increase of debt and taxation; but the burden did not appear beyond our means, until the unprecedented length to which it was carried by the wars of 1793 and 1803. Both took place under the ministry of Mr. Pitt, and the extreme to which he allowed expenditure to be carried was the more remarkable

when we consider his long experience in finance, and that from the time of his coming into office his attention was given to the state of our trade and revenue. Several of his early measures, such as the commutation of the duty on tea, and the commercial treaty with France in 1786, were entitled to great commendation. A similar opinion is not now entertained of his revival of the sinking fund; and it was in an evil hour that he allowed himself to be diverted from his pacific course by the urgency of the aristocracy and his sovereign, to take up arms against the French revolutionists. Unfortunately the atrocities of these men, the endless usurpations of Bonaparte, and, above all, the facilities afforded by the unchecked issue of bank paper, carried our expenditure to an unprecedented height.

In the midst of this hazardous career, the death of Mr. Pitt, and the removal from office of his immediate successors, transferred the management of our finances to the hands of men wholly unequal to the task; of men unconscious of the precarious nature of our paper currency, and the danger of such measures as a stoppage of neutral navigation, or a war with the United States of America. The consequence was a depreciation of our bank paper during five years, an enormous waste of the public money, and a burden on the coun-

try of unparalleled amount.

A state of war is attended by a great demand for the service of individuals, as well in the army and navy as in the public offices. A great number of persons are thus withdrawn from productive employment, and the consequence is an increase of the wages and incomes of those who remain so employed, as well as bringing into activity a number of persons who in a season of peace would hardly have been

accounted worthy of employment.

A rise in the price of corn and other produce is another consequence of a state of war; this leads to a rise of rent; a rise of rent to increased expenditure on the part of the landlord; and that to a general activity and continued employment of working classes. Such was the condition of this country during the twenty years from 1794 to 1814, while in the twenty years that followed the peace there was a corresponding decline, and then a gradual return to higher prices. The fall in the price of produce lowered rents, and greatly lessened the income of the upper classes; hence the contracted expenditure, and a want of employment for the lower orders. All this exemplifies the precarious nature of such a rise of prices as took place in the late wars, and will, more than any other argument, confirm the public in an adherence to peace.

The supply of gold and silver from America continued regularly to increase until the year 1810, since which the disorders in Spanish America, particularly in Mexico, shortened the supply from that quar-

ter by at least one half.

Mr. Jacobs, in his work on the precious metals, calculated the reduction in the quantity of circulating coin, during the twenty years that succeeded the peace of 1814, at not less then 20 per cent. This decrease of the supply of the precious metals must have had some

effect in lowering the prices of commodities, but to what extent it is not possible, with our imperfect data, to form an opinion.

But the discovery of gold in California in 1848, and in Australia in 1851, has not only made up for any deficiency in the supplies from other quarters, but from these two countries alone there has been furnished more than twice the amount of the entire annual produce of the precious metals from all parts of the world in the most productive periods of their working. The effect of this has been to raise wages and prices very largely both in this country and America, and to give a great stimulus to emigration from Britain, and especially from Ireland, and to some extent from Germany.

In 1845 Sir Robert Peel abolished the customs duties on 420 different articles. This measure was a virtual abandonment of the system of protection, which was shortly after followed by the total repeal of the corn laws.

Till recently, our shipping interest was subjected to a variety of burdens and restrictions, by which their energies were weighed down and fettered. These, however, are happily now either wholly abolished or greatly modified. In consequence of these alterations, all the building-yards and all the seamen of the world may be made subservient to the wants and purposes of our merchants and ship-owners, when we add to these recent improvements the increased facilities afforded for the transport of goods by means of the increased number and power of steam-ships, and the great extent of railways. The eventual progress of trade seems decidedly favorable to this country, provided as we are with coal and iron, with canals, roads, and machinery, as well as with abundant capital, intelligent merchants, and expert workmen.

It was feared by some that the introduction of free-trade measures and the repeal of the laws which favored our own shipping would prove ruinous to our trade by bringing foreigners into competition with our own merchants; but the experience of the years that have passed since the adoption of a liberal mercantile policy has completely falsified all the evil forebodings of the timorous and the contracted. No doubt foreigners will derive some advantage from the freedom in which they will participate. But why should we grudge their having some share in the more abundant prosperity which has fallen to our lot: would it be wise in us to fetter ourselves in order that we might restrict others?

During the forty years of peace our trade has progressively advanced, our exports, which in 1814 amounted only to £51,358,398, had advanced in 1852 to £219,515,699; and if we can avoid wars and internal commotions, there is every reason to expect that our prosper ity will go on increasing. Of all the important countries to which our commerce extends, the empire of Russia is one of the least profitable. Although it includes a seventh part of the globe, it only consumes British products to the amount of about a million annually, and for many years its imports from Britain have been diminishing till it has reached this amount. The small kingdom of Portugal nearly equals Russia

in its consumption; and Holland takes three times the amount of British manufactures.

In this view it may appear that a war with Russia would not materially injure the commercial prosperity of this country; nevertheless, the calamitous effects of a state of warfare, not only in its immediate, but in its more remote consequences, will be seriously felt even in this case.

The trades that draw their raw materials from the Baltic and the Black Sea will suffer from short supplies; the prices of their manufactures will be enhanced, taxes will be increased, freights and insurance will be more expensive, the demand for money will be greater, and the interest raised, and in many ways the war will operate injuriously to the public.

We shall conclude our historical sketch of commerce by a brief notice of its prominent characteristics at different periods.

The chief features of the commerce of antiquity were the early opulence of Tyre, and the great extent of the trade of Carthage, and Alexandria in Egypt. In modern times the earliest points of commercial history entitled to notice were the prosperity of Venice, Genoa, and other towns in Italy, the era of whose splendor was the fifteenth century. In the sixteenth and seventeenth the lead in commerce was taken in a remarkable degree by Holland; in the eighteenth by England. But as to the effect on commerce of an increase of circulating medium, it was felt in the sixteenth century by the influx of the precious metals from America, which caused, it is said, a great rise in prices. This rise continued during the seventeenth and eighteenth centuries with a steady but not a remarkable progress. After this came the addition to the circulating medium, arising from the use of bank paper; it became considerable only in the eighteenth century, particularly in the latter half of that period. From 1797 to 1814 the issue of bank or government paper was carried to an unexampled length in England and other countries; the sufferings of the succeeding twenty years were mainly owing to the reaction proceeding from its recall. That period is the only one in the history of modern Europe in which the circulating medium has been much contracted, or the prices of commodities and the income of individuals have expe rienced a long-continued decline.

# PRINCIPLES OF COMMERCE.

Having treated the historical part of our subject at considerable length, it is now fit to bestow some attention on its principles or general rules. By "principles of commerce," we understand conclusions of two kinds; those deduced from the practice of merchants, and applicable to the management of trade by individuals; and those of a more comprehensive character, which, resulting from the course of productive industry generally, are entitled to the attention of a minister, a member of Parliament, or whoever is engaged in the task of devising regulations for trade. Most of those conclusions seem so plain

as to admit of little question; but it is a fact that several of them have been the result of long, and, in some cases, of dearly-bought experience. As a specimen we give the following:

1. Short credits and quick returns, however small the commission of profit, are eventually better than long credits and a large commis-

sion or charge.

- 2. The greatest mercantile profit arises from intercourse with populous and long-settled countries, such as Holland, because the inhabitants are in general possessed of capital, and punctual in their payment.
- 3. Recently-settled countries, like the United States of America, the West-Indies, Spanish and Portuguese America, are always bare of capital. There is a perpetual tendency in them to draw it from Europe; and mercantile transactions with these countries, profitable in the outset, often become otherwise, from delays of payment, and ultimate insolvency.
- 4. Trade should be left as much as possible to its natural course, interference being almost always hurtful. Governments ought merely to remove obstacles and grant facilities. Privileges and monopolies were formerly very general in England; but these, if necessary in an early age, when individual capital was too scanty for distant undertakings, should be withdrawn as soon as such capital becomes sufficient.
- 5. Division and subdivision of employment can be carried to only a limited extent in agriculture. In manufactures they may be carried very far, and are productive of the greatest advantage. They afford employment to persons of every age, and they conduce greatly to the finished execution of work. Hence the superiority of towns, in particular of the larger towns. This was the cause of our manufacturers not going abroad after the peace of 1815, when wages fell, although provisions were still high-priced.

Rules or observations like these are very seldom met with, either in printed works or in personal intercourse; and the reason is, that while few departments of industry have been followed in practice to so great an extent as commerce, hardly any other has been less an object of study in regard to its principles. While the professions of law, medicine, and the church, possess in abundance printed works for the guidance of those who intend to follow them, the case is quite different in regard to trade. There are hardly any books or written compositions for the purpose of instructing the merchant in the practical management of his business, and not many containing statistical or other information connected with trade. To no profession are written precepts considered to be so little applicable; in none is proficiency thought to depend so exclusively on practice. Hence an unacquaintance with principles or general rules, and the commission of grievous errors, as well by merchants in the pursuit of business, as by members of Parliament in the enactment of commercial regulations. Of the former we may take as examples the repeated glutting of foreign markets with our goods, and the injudicious extension of sugar cultivation in the West-Indies; of the latter, the oppressive duties on

522

Baltic timber, or the fetters so long imposed by act of Parliament on our country banks.

The belief that it is for the advantage of a nation to manufacture almost every article it consumes, has been the cause of the most serious inconvenience and loss. It is thus that in France the making of sugar from beet-root, and the more serious error of erecting blast furnaces for making iron in districts unprovided with coal fuel, has placed a large amount of capital in a situation where it is subject to reduction year by year, and whence it cannot be withdrawn without heavy loss. In like manner, the privileges so long conferred by act of Parliament on the silk manufacture in England, frequently tended to produce embarrasment, because they interfered with the natural course of trade. No branch of industry can be of permanent advantage to a nation, unless it can support itself without indirect or artificial aid. Were merchants and manufacturers left to themselves, the natural course of things would point out the branches of productive industry likely to succeed or not in a particular country; and capital would not then be advanced on an insecure foundation. Plain as this appears, it is quite at variance with the creed of our ancestors; a creed which, under the name of "mercantile system," long retained an influence over our traders, and, in some degree over members of the legislature.

The basis of that system was, that "wealth consisted in the precious metals; that what is gained in trade by one nation must be lost by another; and that our great object in receiving returns for our exports should be to get money instead of merchandise." It followed from such notions, that of all possessions, a mining country, such as Mexico and Peru, was the most desirable; and hence in a great measure our rupture with Spain in 1740, which led to our unfortunate expedition to Carthegena, involved us in contest with France, and caused us, in the course of eight years, an immense waste of blood and treasure. The return to a state of peace in 1748 obliged us to desist from attempts on Spanish America, but the influence of the mercantile system continued, and was singularly favored by the annual custom-house returns. These returns exhibit an apparent excess of exports above imports, and give rise to the notion that the balance is sent to this country in the shape of money. Supposing the exports of England to the Continent of Europe to amount for any given year to £20,000,000, and the imports to £14,000,000; the difference, or £6,000,000, is, according to this absurd notion, the amount of profit paid to us in money. It is clear, however, that the custom-house returns take no notice of some very important items, such as the export of public money for our foreign garrisons, the transmission of bills of exchange to foreign merchants, or the import of smuggled goods. Besides, if the quantum of our circulating medium remain, as it probably does, very nearly on a par, what becomes of the supposed importation of money? Were England in possession of all the annual balances which the advocates for this system suppose her to have received in money during the last century, our metallic stock would not be below £400,000,000 sterling; that is, ten times its actual amount! When a merchant exports goods, the sale, of course, take place

abroad, and a remittance is made, either by bill or by the return of other merchandise. It hardly ever enters into the contemplation of the exporter that he would find an advantage by obtaining a return in coin or bullion. Money owes the reputation it has acquired, as an object of national interchange, to its convenience in other respects; to its being the commodity with which we regularly go to market, and to its fitness for the smallest purchases, by the minuteness of its subdivisions. But this recommendation, however important in private business, should have no weight in the intercourse of nations; merchants can be at no loss to dispose of a remittance made in the shape of goods, nor is it any object with them to multiply the means of petty purchases.

The interest of a commercial country is not to increase the amount of its currency, but to quicken its circulation; the same sum performing double and triple duty when passed expeditiously from hand to hand. Now nothing promotes circulation so much as exemption from arbitrary interferences, were the effect nothing more than the general preservation of credit. In France, the monstrous abuse made of the paper system in the beginning of the Revolution has long prevented the use of any other circulating medium than coin; the result is an annual loss of three millions sterling to the public, such being the difference between the cost of paper and the precious metals, even after making an allowance for the retention of a portion of the latter sufficient for the purposes of banking. Some people, however, imagine that, to increase the amount of the circulating medium, is to increase the capital of a country. These persons should recollect that capital is by no means limited to money, but embraces all that mass of property which is devoted to reproductive consumption. When we wish to lend capital, or to employ it in business, we begin by selling the various articles at our disposal: the amount is then in our hand in the shape of money; but this is very transient; the money disappears as soon as we make payment for the new purchases. The public not having time to enter into all this reasoning, judge from first impressions, and take for granted that money is capital, because its agency is required to put capital in motion. Governments, however, might have saved themselves much trouble in providing supplies of metallic currency, since the natural course of business will invariably provide them for itself. The plenty or scarcity of the precious metals depends on considerations altogether different from the imagined balance of trade. Specie was so scarce in England in 1809 that government was not a little embarrassed to find £200,000 for the Walcheren expedition; yet in that year our custom-house returns presented an apparent balance of above £7,000,000 in our favor. \*

No country has suffered so much from the errors of the mercantile system as England; partly on account of the influence of traders and manufacturers in our legislature; partly from the temporizing policy of our ministers, who have seldom scrupled to buy the consent of any great body of the community to a new tax, by the grant of some in-

<sup>\*</sup> Appendix to the Report of the Bullion Committee, 1810.

jurious preference. Hence a variety of pernicious regulations in favor of the landed, the shipping, and the manufacturing interests; hence, also, a number of unfortunate measures in our foreign policy.

Our ancestors laid it down as a fundamental rule, that there could be no profit on the one hand, without a corresponding loss on the other. They considered trade as a game of mere transfer, and had no idea how a country could derive wealth by an intercourse between its own inhabitants. Charles II. entered on the war of 1672 with high hopes, imagining that, by destroying the commerce of Holland, we should not only increase our own, but in a manner absorb that of the world. Political reasons led us afterwards into close alliance with Holland, and prevented the ebullitions of our jealousy in that direction; but the alarming power of Louis XIV. and the prospects of his acquiring the crown of Spain, led us to a closer connection with Portugal, and particularly to the well-known Methven treaty, concluded in 1703, the object of which was to favor the consumption of Port wine, in return for a similar preference to our manufactures. The result has been, that we have not scrupled, for more than a century, to punish our palates and injure our health for the sake of an imaginary political advantage; we say imaginary, because France would evidently have agreed to take our manufactures in return for her own produce; and if the increase of her trade had, on one hand, the effect of augmenting. to a certain extent, her national power, it would, on the other, have increased her dependence on us, and have rendered a war with us extremely impolitic and unpopular.

Our attachment to Portugal arose, in a great measure, from her not being a manufacturing country, and likely, in the opinion of the calculators of the day, to be so much the more advantageous to us in the capacity of a customer. This notion has prevailed in our councils to a very recent period; the administration of 1808 and 1809 not scrupling to give encouragement to the export of merchandise, on a large scale, to the unproductive occupants of Brazil and Spanish America. Now, the fact is, that the means of extending our trade, and consequently our profits, with a foreign country, are to be estimated by a quite opposite rule; they depend on the productive power of that country, on its means of affording equivalents for our commodities; in other words, on its capability of paying for that which it suits us to sell to it. Now, what country was ever wealthy without industry? The mines of Mexico and Peru, the richest the world ever saw, fall, in point of annual produce, far short of the annual value of the cotton, the tobacco, the flour, and other less tempting products of the United States. In like manner, the cochineal, the cocoa, the barilla, and even the indigo of Spanish America, formed a small amount when put in competition with the exchangeable commodities possessed by the industrious nations in our own neighborhood, such as France, the Netherlands, or the north of Germany.

If from our own favorite policy we turn our attention to that of continental states, we find Holland steering a course of impartiality, and guarded from an imitation of our trespasses, not indeed by supe rior knowledge, but by the characteristic moderation of her govern

ment. The northern kingdoms deserve comparatively little attention, their rulers having in general given their thoughts much more to war than to discussions of internal policy. The same thing was long true of a country where the commercial interest has at no time been very considerable; the personal will of the sovereign, and the influence of the noblesse, having afforded the grand raisons determinantes for public measures. Still the history of France is not without traces of the effects of mercantile prejudices. Among other regulations of the kind, there formerly existed several for the purpose of favoring linen manufactures instead of cotton, because flax was a home product, whilst the purchase of cotton carried money out of the country.

At last it was found out by some Frenchmen of greater sagacity than the rest, that cotton might be safely admitted to entry, the money required to buy it proceeding necessarily from the employment of French industry in some shape or other. But the extent of popular prejudice was most singularly exemplified at the time when it was proposed to permit the unrestrained use of toiles peintes, or printed calicoes; every town that had a chamber of commerce remonstrated against it. A deputation sent from Rouen affirmed, that "the proposed measure would throw its inhabitants into despair, and make a desert of the surrounding country;" Lyons, the centre of the silk manufacture, declared that "the news had spread terror into all its workshops;" Tours "foresaw a commotion likely to cause a convulsion in the body politic;" Amiens asserted "that the proposed act would become the tomb of the manufacturing industry of France:" and Paris declared, "that her merchants came forward that they might bathe the throne with their tears." The government, however, stood firm; the duty on printed calico was withdrawn, and the inspectorgeneral of manufactures ventured some time afterwards to challenge the authors of those elegant effusions to compare their predictions with the result. "Will any of you," he said, "deny that the manufacture of printed calico has been the cause of giving a vast extension to the industry of the country, by employing a number of hands in spinning, weaving, bleaching, and printing? Look only to the branch of dyeing, and say whether this change has not done more for it in a few years than other manufactures would have accomplished in a century."

In some countries government go much farther, and still act in a commercial or manufacturing capacity, notwithstanding all the admonitions of political economists, or the more home-felt lessons of experience. The Austrian government conducts the gold and silver mines of Hungary to so little account, that the profit realized from these splendid establishments does not exceed a few thousands a year. In the year 1817 the French government, desirous of laying in a stock of corn for Paris, obtained a loan of money, with which they made purchases in various markets both in and out of the kingdom. The result was most distressing; the price of corn rose from 80s. to 120s. per quarter. The people in the provincial towns became apprehensive of a scarcity, and, though in general submissive to a fault, attempted at Rouen and other places to impede the course of the market, and to

prescribe a limit to the price of corn. The alarm, once given, extended through great part of Europe, and gave occasion to a sudden rise, as may be seen by reference to the corn prices at the time in London, Amsterdam, and Hamburg. Nothing is, therefore, more impolitic than the interference of the public treasury with markets, however good the motive; a truth which has been so thoroughly felt in England as to prevent any thing of the kind during the last sixty years, government having confined itself in seasons of scarcity, as 1800, 1810,

1816, to permitting the free import of corn.

We are next to advert to the mercantile system in its most limited sense, in the shape which it now bears, after all the modifications of the experience of a century and a half. The predilection for the importation of "hard dollars" has disappeared among a portion of the public, particularly since making the discovery that bank paper can be made to answer the purposes of gold and silver. But even these persons are far from admitting the doctrines of political economists in all their extent; they still cling to the notion that we should discourage the import of a foreign article whenever a corresponding commodity can be raised at home; that we should impede, or even prohibit, all foreign manufactures; and that we should not scruple to encourage certain fabrics of our own by bounties. Such was formerly the creed of the majority of our merchants and manufacturers; such was, forty years ago, the creed of our ministers and presidents of the board of trade. It proceeds on the plausible idea, that we cannot provide too much employment, and that our people would be in danger of falling short of work were we to purchase finished articles at the hands of foreigners. But there is not in the natural course of things any such deficiency of labor as to make it necessary, or even expedient, for us to turn things out of their regular order for the sake of giving employment to our population. Providence has evidently ordained that industry should be at no loss for objects; the interruptions to its peaceful course arise from our own wayward policy; from our restraints, prohibitions, and, above all, from our sudden changes from war to peace, and from peace to war. These are the true causes of such scenes of embarrassment and bankruptcy as we witnessed in 1793, at the close of profound peace, and as we have unhappily witnessed since the end of the war of 1815.

Equally erroneous is the notion, that it is more for our interest to send abroad manufactures than raw produce or money. If you grant a bounty on an export, you do nothing more or less than bribe a foreigner to make a purchase from you; you withdraw from its natural destination a portion of your capital and labor; for the sake of extending one branch of business, you weaken your means of competition in others. The money so long paid in the shape of bounties on one of our most popular exports, we mean British linen under 1s. 6d. a yard is a public loss not only to the extent in question, but to twice or three times that extent in indirect injury; it has withheld the industry of our countrymen from other lines, which they might have prosecuted without a premium, and in which they would have no occasion to dread the rivalship of their neighbors. Mr. Hume has justly remarked,

that in a question of personal right, the perception of a half-educated man may be sufficiently sound; but that the case is very different in regard to matters of general policy, where the real is often different from the apparent result. Now, this state of half-knowledge has been the origin of almost all our mercantile miscalculations; we have listened to first impressions, and have not scrupled to give them a practical operation by acts of Parliament, without ever considering that

the remote consequences would be injurious to ourselves.

To what fatality is it then owing, that in this great commercial country the public should still be so far behindhand in a knowledge of the principles of trade? Unfortunately these doctrines, though closely connected with the national prosperity, have never formed an object of attention at the English universities, and but indirectly and imperfeetly in those to the northward of the Tweed. Add to this, that most of the works hitherto published on political economy are written in an abstract, unattractive style, fatiguing the attention of the reader by a long series of reasoning, and seldom relieving him by diversity of subject, or by the introduction of practical illustrations. lie is still in want of a work which should convey the liberal doctrines of the philosopher in the plain language of business, and support the course of reasoning by an appeal to facts familiar to the mind of the merchant. Our limits do not by any means admit of our supplying this deficiency, or of bringing forward the arguments necessary to erect a structure of conclusive reasoning; they enable us only to state some of the more important results, to which we shall now make a few additions.

We may safely discharge from our minds all that has been said, and all that has been written, in regard to the greater relative advantage attendant in trading in this or that particular commodity; we may feel satisfied that profits are much more on an equality than is commonly supposed; that no one would long be a dealer in that which did not afford him advantage, or remain a stranger to that which was throwing an extra gain into the pockets of his neighbor. The same rule is applicable in a national sense, the traffic in one commodity being either directly or indirectly as productive of profit as in another. Even foreign articles of luxury should not be discouraged, since the money required to pay for them must be previously raised by the employment of British industry in some useful manner. This affords a new proof of the fallacy of first impressions, and leads to the grand practical conclusion of allowing people to "buy commodities wherever they can be got cheapest, without seeking to favor home produce above colonial, or colonial above foreign."

Merchants should possess unrestricted freedom, not only in regard to the articles they deal in, but in respect to the time of keeping them back or bringing them to market; and this not only from the general title which every one has to the management of his own property, but from a conviction that whatever benefits the individual will be productive of corresponding benefit to the public. This is a point of the last importance, as reconciling the lower orders to a variety of unpopular employments of capital, such as buying up goods to be

warehoused and not brought to market till prices are advanced. Take, for instance, the capitalist who buys a thousand hogsheads of sugar on its arrival from the West-Indies in August, for the purpose of selling it in the succeeding March or April. Such a transaction is of use to all parties, affording, in the first instance, a customer for the planter or planter's correspondent; a depository for the public during a season that the article ought in great part to be stored up; and finally a seller, at a time when, without such deposits and such forthcoming of supply, the price might have become exorbitant, and might have continued so until the arrival of the next year's crop. How applicable are these arguments to the most obnoxious of all traders, the engrossor of corn.

The more we study the natural progress of commerce, the more we shall be satisfied of the expediency of leaving all its various agents to their uncontrolled management. Business then divides itself, particularly in a large city, into a variety of separate branches, each of which may be carried on to a surprising extent by separate establishments. The commission charged by such persons is small, their dispatch extraordinary; capital does not remain locked up in their hands, and goods find their way to the market whenever prices are encouraging, that is, whenever the consumers are in want of them; they are withheld only when the market is glutted, and when to force sales would be productive of eventual injury to the buyers themselves. The doctrine of the happy medium is nowhere more applicable than in commerce: if you reduce prices for one season below what is necessary to indemnify the producer, you discourage production for the next,

and you expose yourself to the hazard of a dearth.

Monopoly is now generally admitted to be highly impolitic. No new grants of the kind have been issued among us for many years, and every renewal of the charter of the East-India Company has been marked by a diminution of its restrictive character, till in 1834 its monopoly was abolished. The public are now aware that a privileged company cannot make its purchases abroad on better terms than individuals, and that the chief operation of the privilege is to enhance the sale prices, or, in other words, to put money into the hands of a few at the expense of the nation. They are further aware that the concerns of a large corporation cannot be managed with the minute economy and vigilance of the private merchant, and that its grand advantage lies in the intelligence and dexterity acquired by the transaction of business to a large extent by one establishment; an advantage of great importance, but which has nothing to do with the possession of exclusive privileges.

It is now about seventy years since the conclusion of Mr. Pitt's well-known commercial treaty with France; a treaty which many on both sides of the channel were inclined to think particularly advantageous to us, and which certainly afforded a grand object of declamation to Bonaparte. The fact, however, is, that such treaties are good only in as far as they give general confidence to the merchants of both countries; whenever they go farther, and interfere by specific provisions, they are infallibly pernicious, and not the least so to the

apparently favored nation. It is a symptom of some promise in the present age that, though backed by all Europe, our ministers did not, in the treaties of either 1814 or 1815, go the length of imposing any restraints on the trade of France, but left things to their free course, subject only to such restrictions as might be deemed indispensable by either government for the protection of particular branches of manufacture.

The final conclusions to be drawn from the principles of commerce are of the most comprehensive and beneficent nature. They teach us that every nation finds its account in the prosperity of its neighbors; that it would experience a corresponding suffering from their decline: that to aim at engrossing more trade than naturally falls to our share, is sooner or later injurious to ourselves; and that war, even when successful, is attended with the most serious losses. War turns to waste a large portion of our productive means; it leaves us oppressed with a ruinous burden in peace; it impedes the future extension of our exports, for the injury done to our neighbors recoils on ourselves; in short, it is so replete with evil to the public and individuals, as to be justifiable only in an extreme case, such as the defence of national

independence, or the overthrow of a tyrannical usurper.

Division and subdivision of employment forms the great distinction between a backward and an improved state of productive industry. It increases the efficiency of the mechanic or manufacturer to an extent of which no one who has not studied the subject can have an adequate conception. Now, the degree to which employment is subdivided depends mainly on the size of a city or town; and in estimating the state of civilization in a particular country, we cannot have a better guide than the proportion of the inhabitants of towns to those of the open country. Flanders and Holland were long the most improved part of the north of Europe, and had the greatest number of towns on a given extent of territory. This they still have, with the exception of the counties (Lancashire and the West Riding of York) which are the chief seats of our manufactures. After the Netherlands in town population come the north of Italy and north-east of France, along with the western part of Germany. Prussia and Austria have each a comparatively small number of town; Poland has still fewer, and Russia is the most deficient of any country in Europe. In England the increase of town population has been progressive during the last eighty or ninety years, and bids fair to go on in an equal or greater ratio.

The division of employment is the result of commerce and of increased population. It is of two kinds; that among individuals, by which a specific task is appropriated to each, and that among nations, by which particular kinds of products are raised to a greater extent in one country than in another. The latter is as yet only beginning to claim the attention of public men, for it has been a frequent error with government, to establish, in their respective territories, a variety of manufactures, without sufficiently weighing the local obstacles or disadvantages. Of this France furnishes some striking examples, particularly in the case of iron. The abundance of coal in England,

and the ease in conveying it, and other bulky goods, by canals, give to our manufactures of iron and hardware an advantage which France in vain endeavors to equal. Her true policy would be to repeal the very heavy duties on the import of our iron and hardware, and to trust to her means of supplying us with wine, brandy, and the other natural products of her country, to an equal or greater amount.

In point of knowledge of the great doctrines of political economy, Germany, or, to speak more properly, the Protestant part of Germany, particularly Saxony, may be said to take the lead of other countries on the Continent. The Dutch, however exemplary in their practical legislation, have little turn for speculative reasoning; the French have not patience to follow through its various links a chain of philosophical deductions; but their admiration of whatever is humane or liberal makes them wonderfully delighted with the brilliant conclusions of the science. They have the advantage of possessing, in the work of the late J. B. Say, the best-arranged general treatise that has hitherto appeared on the subject; and they are by no means ill prepared for a very extensive application of political improvements, such as the abolition of privateering, the repeal of all heavy duties on foreign goods, and the substitution of inland taxes for those custom-house imposts which impede the free communication of nations. The rest of Europe is so much in the dark in regard to the great truths of political science as to see merely through the medium of local governments. Such is the case likewise in Italy, although that country can boast individuals of some note among the writers on the principles of commerce, and the reflecting turn of the people is favorable to such investigations; and even in Britain a large party is still adverse to the unrestricted application of these simple and beneficent principles, but this party is daily diminishing. effects of the free-trade principles, which have been for some time in operation, as proved by the periodical returns of the Board of Trade, are facts which cannot be withstood; and we may safely calculate, that a few years will convert the remaining advocates of protection to the free-trade faith.

It is surprising that a people so quicksighted, and so keenly alive to their own interests, as the citizens of the United States of America, should cling so obstinately to the illiberal doctrines exploded in this country. If their national expenditure demanded a revenue which could only be raised with difficulty, there would be some apology for their laying on heavy import duties; but with a large surplus revenue there can be no good reason for laying on duties on imported goods merely to protect certain manufacturers, and so to interfere with the natural course of trade, and to enable these manufacturers to charge a higher price for their commodities than they could demand if the trade were left free; or, in other words, to enable a portion of the community to tax the great body of the citizens for their own benefit.

Having thus briefly stated the principles of free trade, we shall proceed to the practical topics which we proposed to discuss, begin-

ning with the consideration of the average profit of capital employed in trade.

1. It was common during the war to estimate the emolument of a wholesale business in Britain, in a well-established concern, at ten per cent on the capital. Moderate calculators qualified this by calling it between eight and ten per cent; but they who were at great pains to take every thing into the account, and to enumerate a variety of petty deductions which escape the sanguine reckoner, found that, in a large concern, seven per cent was in general the extent of the clear earnings, leaving only two per cent above that which was the current

rate of interest during the war. Mercantile profits are subject to a variety of unforeseen deductions, originating partly in an accumulation of petty expenses; but more, at least in business of long credit, from deficient payments. The latter are technically called bad debts, and almost always exceed the anticipated amount, in consequence both of the sanguine temper of our countrymen, and of the actual capital of the buyers being much inferior to its appearance. Secresy both as to capital and annual profit is considered as a first-rate point amongst mercantile men. To the latter there can be no objection; but the concealment of the amount of capital, and the almost invariable consequence, its exaggeration, are productive of very pernicious effects. It is founded partly on the general vanity, and more perhaps on an expectation of advantage from a command of credit. But were the practice of transacting with ready money to become general, a merchant would have no greater motive to be thought in affluence than an individual in any other line. But be this as it may, the fact is, that the clear profits of trade, whether home or foreign, whether mercantile or manufacturing, whether retail or wholesale, are greatly below what the world imagines. Many hold a contrary language with regard to trade in general; but few do so in respect to their own particular business. "Ours," say they, "is of limited emolument; but other lines are very different, inasmuch as they admit of speculation and of higher charges." Whoever takes the trouble to question men in almost any business or profession may reckon on receiving a succession of such answers; answers not suggested by a wish to deceive or to conceal the profits of the individual, but originating in the general disposition to take the ignotum pro magnifico.

We have naturally a strong disposition to contemplate the past or the distant through a magnifying medium, and to believe whatever the confident assertions of others, or the love of wonder in ourselves suggests with regard to reported wealth. Hence the allegations so confidently brought forward in regard to the riches of ancient cities, and the notion generally entertained with respect to the rapidity of fortune-making in our foreign settlements. India was long proverbial in this respect; and it requires much more than the usual stock of information to discover, that if we make allowance for deaths, and disappointments from various causes, the proportion of those who succeed in that country is not greater than at home; and that a fortune, when it does happen to be made, is the result of the length of

time, of a habit of saving favored by exemption from the expense of a family, of rare political contingencies, or, finally, of unusual opportunities consequent on the mortality of competitors.

Another point in which delusion prevails, relates to the effects of war, particularly that of 1793; a war in which we still believe ourselves, and are believed by foreigners, to have engrossed and absorbed the commerce of the world. A reference, however, to official documents will show that the exports and imports of the most boasted years of the war in question were below those of the succeeding years of suffering. The flag of our enemies was indeed expelled from the ocean, but the greater proportion of trade passed into the hands of neutrals; and when, in 1808, we took it out of their possession, we were taught by dear-bought experience, that war, under any circum-

stances, is adverse to commerce.

These observations must be understood not as intended to depreciate the value of commerce, or to damp in the individual the hopes of eventual success. They show, indeed, that the ratio of profit is generally small, but they afford the consolatory assurance that mercantile concerns may be carried to a great extent, and that the amount of gain may, in process of time, be rendered very considerable. This leads us to advert to a matter of great interest to us as we now stand relatively to the rival countries of the Continent. It is a maxim. that commercial establishments, whether in the mercantile or manufacturing line, should be confined to a few objects, and conducted on a large scale. It is by this only that the task of individuals can be simplified, that employment can be subdivided, that work can be put quickly through hands, or that we can provide on the spot a supply of the various and indispensable requisites of business. A large establishment affords the means of employment to every kind of capacity; in fact, the duty is so facilitated as to become, in many cases, a mere routine; while the more intelligent and attentive workmen act as superintendents, the mass of the unambitious and unthinking are occupied with the detail. It is owing to this process of subdivision, and to the relative magnitude of the London workshops, that many articles can be supplied in our metropolis as cheaply as in the provincial towns, where labor is 40 per cent lower. The same rule accounts for the charge on the transaction of business by merchants, accountants, attorneys, notaries, and agents, being less heavy than might be apprehended from the greater expense of living in London. Similar results take place in regard to manufacture in such towns as Birmingham, Sheffield, Manchester, Leeds; and it is to this, more than to any other cause, that we owe our ability to compete with the cheaper labor of the Continent.

2. This analysis of the profit of trade leads us to say a few words on a topic which has hitherto been very generally misunderstood, we mean the profits of speculation in trade. Among men of business this expression is applied to incurring extensive hazards in the hope of extensive emolument; in short, to whatever is foreign to the proper business of the individual, or beyond the control of common rules. It is to such undertakings that vulgar credulity ascribes ex-

traordinary profits; and even well-informed men are apt to give way to the assertions so confidently made, of vast occasional gains in this line of business. Dr. Smith himself, after remarking (Wealth of Nations, book i. chap. 10) that to make a fortune in a regular line commonly requires a long life of industry and frugality, adds, no doubt on the faith of repeated assurances from mercantile friends, that there are many examples of fortunes realized by speculators in the course of a few years. Now, the men who embark in speculation are, in general, very loose accountants; their estimate of profits applies to the gross, never to the net return; besides, they are almost always adventurers, and adventurers are seldom noted for the observance of truth. Their favorite season of activity is a time like that of 1808, when the sudden stoppage of ordinary intercourse caused a rapid fluctuation in the price of commodities, and when the regular merchants withdrew from the scene. Now, what sober estimate can be formed of loss or gain in such a chaos? Add to this, that these men trade almost always on credit, and are in need of all the support which flattering representations, and rumors of sudden profit, can give them. All these reasons seem to justify a deliberate inquirer in doing what is seldom done on such occasions, we mean in withholding his belief from the confident allegations of speculators, so long as they are not supported by collateral evidence.

Our opinion is, that instead of the large profits commonly ascribed to this course of trade, the individuals concerned in it experience little else than disappointments, and maintain a perpetual struggle to keep up a fair appearance to the world. This opinion is founded partly on a knowledge of the actual career and circumstances of speculators, but more on the well-known fact, that almost every line of business is in the hands of established merchants, who, of course, are too vigilant to overlook the opportunity of emolument, and who have much better means of information than temporary interlopers. Still, should there remain doubts as to the accuracy of our opinion, the question may be brought to a point by reference to the accountbooks of any given number of celebrated speculators; their affairs end almost always in bankruptcy; their papers continue open to access for years in the hands of their solicitors or assignees; and we are much mistaken if an inspection of them would show in one case out of ten, that the parties had at any period succeeded in realizing

their boasted profits.

We have been induced to dwell the more on the boasts of speculators, because they are productive of great mischief in unsettling persons in business, particularly young men, and in making them look on their proper line with comparative indifference. It would be endless to attempt an enumeration of the various ways in which the rage for speculation has brought misfortune on merchants and manufacturers. The opening of a new country, such as Buenos Ayres, Brazil, or Caraccas, led to the export not only of a prodigious overstock of merchandise fitted for the country, but of many articles totally unsuited to the climate and habits of the people. Again, in 1814, when the war with France was drawing to a close, goods, both colo-

nial and manufactured, were poured into the Continent of Europe, as if the compass of the markets was unbounded, and as if the calamities of war had produced no decrease of disposable capital. In 1825, our speculations abroad were most unfortunate, while at home vast sums were lavished in buildings, in mines, in manufactories, and other establishments, which never had a fair prospect of success, and owed their origin to the sanguine imagination of one projector, and the credulity of another.

The country in which trade shone forth in all its splendor, where it was cultivated without the support of arms or prohibitory regulations, where, in short, it developed its beneficial tendency in all its extent, was Holland. If we look to the early enterprise of the Dutch, we find them enabled, by the power of their productive industry, to assert their independence at home, and to assail their enemies in the remotest part of their empire. The Portuguese in the east, and the Spaniards in the west, were each found unequal to the task of resisting these republicans. A proud stand was made by them against the navy of England, and they did not fall into despair even when assailed by our forces in conjunction with those of France. Afterwards, when happily restored to our alliance, and when they cooperated with us in the great struggle against Louis XIV., it is surprising how large a proportion both of troops and subsidies was furnished by this apparently inconsiderable state. "No country," says Sir William Temple, "can be found where so vast a trade has been managed, yet the inhabitants have no native commodities towards building vessels, and hardly any that are considerable for traffic with their neighbors. Holland is grown rich by force of industry, by improvement and manufacture of foreign growths." Proceeding to specify more particularly the causes of this mercantile prosperity, Sir William enumerates "the easy communication of water, particularly by the Rhine and Maese; the security of property; the undisturbed liberty of conscience, and the progressive influx of people persecuted for their religious opinions in Flanders, England, France, and Germany." Such were the original causes; those of subsequent operation were the "general habit of industry and economy; the formation of canals; the institution of banks; the low interest of money; the appropriation of particular towns to particular branches of business; application to the fisheries, and, what he regrets much should not exist in England, the practice of keeping an official register of all purchases of land or houses;" a practice introduced into Hol land and Flanders in the reign of Charles V., and which at present exists in Scotland, to the incalculable convenience and security of money transactions.

3. We are now to say a few words on a different topic, namely, the effects of trade in forming the character of individuals; a matter of no little importance in a country like ours, where merchants both constitute so large a portion of the community, and exercise such influence on the proceedings of government. The mercantile character has a number of good points, being exempt from the vacuity and indecision so frequent in fashionable life, as well as from the various

vices consequent on idleness, and which are so strikingly exemplified in the gambling and libertinism of the French metropolis. ever good is produced by continued activity, and by a pointed attention to the specific objects of one's occupation, may be confidently looked for among commercial men; with the farther advantage, in large concerns, of an exemption from petty jealousies and invidious interferences. In such cities as London and Amsterdam, merchants are aware that the field is ample for all; that the prosperity of one is very far from impeding that of others; and that when disappointment and failure occur, their origin will be found in a very different cause than competition. Here, however, we must close our encomium, and, in the spirit of impartiality, proceed to exhibit the opposite side of the picture. The merchant's knowledge is particular, not general; he obtains a habit of understanding individual character, and a dexterity in managing his own affairs; but he has not, and cannot, from his course of occupation, acquire the power of reasoning comprehensively on the interests of trade. If he observe in war a tendency to raise prices, or to invigorate particular lines of trade, such as ship-owning or insurance, he will probably be led to the general inference, that to a maritime country war is advantageous. Our last contests having been attended with the undisputed command of the ocean, nothing more was required to satisfy the majority of traders that our mercantile marine was in a state of equal ascendency. They took an pied de la lettre the custom-house reports of our annual exports, without observing how much was to be deducted on account of the depreciation of our bank paper, or how surely we were laying the foundation of future distress, by submitting to enormous taxation. Again, when in 1807 the long continuance of war had given a serious wound to our trade and navigation, a majority of the merchants ascribed it, not to the true cause, but to the undermining competition of the Americans. Their range of reflection was not such as to enable them to perceive that, by overturning the prosperity of the latter, we should sap the foundation of our own; and that every million which we prevented our Transatlantic neighbors from adding to their capital, was so much withdrawn from a fund devoted to the increase of the productive industry of Britain. Hence our unfortunate orders in council, the main cause of the overthrow of our exchanges with the Continent, of the increase of our expenses in Spain and Germany, of our war with the United States, in short, of the long continuance of our sufferings since the peace.

4. Nothing would, in our opinion, conduce more to the prosperity of trade than the adoption of the plan of doing all wholesale business for ready money, and the relinquishment of that habit of long credit which prompts to unguarded enterprise, and has for so many years been the principal cause of crowding the columns of our gazettes

To show the results of long credit, it is necessary to go at some length into practical illustration, and to apprise our readers of the real situation of the majority of our manufacturers and export merchants. A manufacturer on the present footing receives orders in

the course of the year from twenty or thirty mercantile houses; the goods to be exported probably to the West-Indies, the United States, the Spanish Main, or Brazil; the understood term of credit twelve months. The manufacturer does not receive the orders from abroad; he has an intermediate guarantee, that of the exporting merchant. Still the risk is considerable; but he naturally hopes for the best, and is unwilling to decline an order when it comes to him from a quarter of respectability. Now, by mercantile respectability, our readers are to understand integrity, and the intention of acting up to engagements; but the power of doing so, especially at a remote date, is a very different question, and is, in general, possessed in a much smaller degree than the public imagine. The trader whose capital is £30,000 will not scruple to ship goods to the value of £40,000, first in the hope, so general among merchants, of realizing a handsome profit, and next in the confidence that should the foreign market be dull, and should delays occur in obtaining returns within the given time, his credit will procure him indulgence for several months, at the end of which the expected remittances can hardly fail to arrive. He may, and in general does go on for several years without much embarrassment, receiving indeed less than he sends out, but informed that all has been well sold, and cannot fail to be soon realized. He thus goes on pleasing himself at every balance of his books with the seeming profit, and only regretting that hitherto that profit has not been tangible, since it exists in the shape of a debt due by his Transatlantic correspondents. He continues, however, under a favorable expectation of their making up for past deficiencies, and flatters himself that the delay has resulted from partial or temporary causes. He begins to find himself straitened for funds, but has as yet little difficulty in obtaining relief from a moneyed friend, or a prolonged credit from the manufacturers. His correspondents continue to write in a strain of confidence, and to call for more goods, which, if he be of a confiding character, will lead him to extend the annual amount of his shipments; but at all events he is obliged to continue a certain supply, for the sake of keeping up the assortment of stock. Still he finds that year after year a larger portion of his capital remains on the other side of the Atlantic, and that his correspondents, however desirous, (for we by no means put an extreme case,) are unable to prevent an accumulation of debt, because they are in like manner left unpaid by the inhabitants of the country. To go to law would be of no avail, since it is the policy of almost every government in a recently-settled country to favor the debtor, and to give him the means of retaining capital in his hands. Affairs now begin to be serious with the exporter; the manufacturers and other creditors cannot or will not give further time, and demand an explanation of his circum-This explanation takes place, and serves to show that their debtor is a man of honor, with more assets than debts, but the latter are certain, while the former are at a distance of 3000 miles. The consequence is a grant of time, an allowance to the debtor of two. three, or four years, to act under letter of license, in the hope of accomplishing that which it is evident cannot be performed sooner,

36

This is, in general, both the wisest and most liberal course; still it is not often found to succeed, because the foreign debts can seldom be realized in climates where life is held by so uncertain a tenure, where respectable agents are so rarely found, where buyers of goods have so little capital, and above all, where the law allows them such a length of time for payment. A few of the promised installments are probably made good, but in general the merchant recognizes the impracticability of fulfilling the remainder, and finds it eventually necessary to submit to bankruptcy.

In Holland, we find that in its better days, bargains were almost always made for ready money, or for so short a date as six weeks or two months; profits were small in their ratio, but the quickness of returns made them eventually large; failures were rare, even in so distressing an era as the occupation of their country by the French, which began in 1795, and involved, from the outset, a stoppage of maritime intercourse with all their possessions in India and America. The consequence of this stoppage was a decay of trade, a suspension of various undertakings, a scarcity of work, a miserable duliness in the sale of goods; all leading, in the first instance, to diminished income, and eventually to encroachment on capital; but, amidst this distress, the failures were surprisingly few, fewer indeed than occur in Britain in any ordinary season. Another example, equally replete with instruction, was the state of France after the double invasion of 1814 and 1815. There prevailed at that time a general discouragement among the upper ranks, and a great deal of wretchedness among the lower; trade being at a stand, and stocks of goods lying unsold in shops or warehouses for years; still bankruptcy was exceedingly rare. All this shows what a satisfactory prospect we may anticipate when we adopt the plan of transacting the greater part of our business for ready money.

Yet we are far from recommending any law or measure to enforce that object; the evident advantage of the plan will not fail to secure its adoption. One great obstacle which long stood in the way of the system of cash payments in mercantile transactions, arose from the impolitic laws which limited the interest on borrowed money to five per cent. The usury laws being now repealed, the money-holder may lend to the merchant at such a rate of interest as the state of the market entitles him to receive. Formerly, when the market rate of interest exceeded five per cent, the merchant could only borrow money for the purposes of his trade by resorting to some subterfuge, such as life policies, which had the effect of enhancing the interest to an extravagant rate.

### III. COMMERCIAL FLUCTUATIONS IN THE PRESENT AGE; EVILS OF AN UNDUE EXPENDITURE BY GOVERNMENT.

The present age has been remarkable beyond all others for fluctuations in the state of trade, and in the value of property as represented in money. During the twenty years of war, from 1794 to 1814, there was a continued rise of prices; while a decline, almost equally great and long-continued, has taken place since the peace.

37

The public long flattered themselves that individual property in this country had received during the war an increase unexampled in our history; the visions inspired by high prices have disappeared, and the computation of our augmented wealth seems to have had no solid foundation.

The reaction in the money value of income and property has been productive of great embarrassment and distress. The causes of it are and have long been a subject of anxious consideration, but they have not as yet been satisfactorily explained. To this we shall devote the rest of this article, premising that the subject is rather intricate, and will call for the close attention of the reader.

The rise in the price of commodities in the late wars with France was steadily progressive, and reached eventually a great height. If we compute the degree of enhancement in provisions, wages, rents, and almost every thing except manufactures, we shall find it to have been at the close of the war sixty or seventy per cent on the prices of 1792; in other words, in the year 1812, £160 or £170 were required to make the purchases which in 1792 might have been made for £100.

This great advance is commonly ascribed to our bank paper, in particular to its increased tissue and inconvertibility into cash in 1797. Admitting these to have been the main causes of the rise, it may be well to explain the mode in which they operated, and to endeavor to give a definite form to what is generally brought forward as vague allegation. This is a nice question, and will require a reference to our expenditure in former years.

It is now fully a century and a half since this country adopted the funding system, or the plan of carrying on war with borrowed money. The result was, both a great increase of yearly expenditure, and a continuance of that increase for a number of years. That a state of war enhances the price of commodities is generally admitted; the point is, to define in what manner it produces that effect. It does so chiefly in three ways:

1. By increasing taxes.

2. By withdrawing capital from productive to unproductive purposes; from agriculture, manufactures, and trade, to the maintenance of fleets and armies. The manner of doing this is by public loans, and the result is a rise generally very considerable in the rate of interest.

3. By withdrawing several hundred thousand men from productive to unproductive employment; that is, from agriculture, manufactures, and the work of mechanics, to service in the army and navy, or to preparing arms, clothing, and the various naval and military stores required by government. The number of men thus withdrawn from productive employment in the late wars was on an average 600,000, or fifteen per cent of our able-bodied population.

These causes of enhancement have operated powerfully in every war since the time of William III.; but in the military contests of the present age there were two additional causes of great importance, namely:

4. The repeated insufficiency of our crops, and the necessity of importing large quantities of corn.

5. The inconvertibility and eventual depreciation of our bank paper. The effect of an insufficient crop in raising prices is easily under stood; that of our bank paper requires some explanation. What then was the consequence of our bank paper becoming inconvertible, or no longer payable in cash? It was not so much an increase in the amount of our circulating medium, as a certainty of a continued supply. During the first years of the war, 1793, 1794, 1795, 1796, and the early part of 1797, our financial difficulties had been serious, and the expenditure of the government had been repeatedly checked by remonstrances from the Bank, founded on the state of foreign exchanges, and the drain, or apprehended drain, of gold from its coffers. But after the exemption of the Bank from cash payments, there was an end of such apprehensions, and government possessed an uninterrupted command of money, because the checks on its supply were removed.

Again, the direct causes of rise of prices in war are increase of taxation, and the withdrawing of men and capital from productive employment. Now to these causes, which in former times were restricted both in their duration and extent, the exemption from paying bank paper in cash gave a scope almost unlimited. The uninterrupted supply of money consequent on the exemption was felt in every department; among agriculturists in the payment of rents. among merchants in the discount of bills, and in the community at large by a silent acquiescence in the rise of wages, salaries, and the price of commodities; a rise which the war rendered necessary, but which had been strongly resisted until 1797. Hence a power in the public of paying taxes and making loans to an unexampled amount. Facilities so many and so great went far to persuade the public that the successive additions to the sums of money paid for rents, wages, and the purchase of commodities were proofs of increasing wealth. Few persons could perceive that this increase was, in a great measure, nominal; and still fewer could foresee the distressing extent of a reaction on the return of peace. Had our ministry been at all aware of that reaction, their scale of expenditure would have been very different.

Such were the causes of the rise of prices during the war; the fall has been almost as great since the peace, because circumstances have been altogether different. Government have needed less both of men and money, and have left both to be employed productively by the public. Many persons imagine that, had there been no such act as that of 1819, and had the exemption from cash payments been continued, prices would have been kept up, and the public would have been saved a great part of the distress that took place after 1819. In this, however, they go too far; their argument holds good only to a limited extent. During the war the exemption from cash payments had a most powerful effect on the prices; in peace its operation would have been temporary and partial, because the circumstances of the country were entirely altered. The causes of enhancement arising from war no longer existed; our men and capital were restored to productive employment; both served to augment our yearly

supply of commodities, and consequently to furnish them at a cheaper rate. We were, besides, in open intercourse with the Continent, and in that case there is a continued tendency to a reduction of prices. Every year our markets felt the lowering effects of imports from countries less heavily burdened.

This was in a manner proved by experience. During no less than five years of peace, from 1814 to 1819, our bank-notes were exempt from payment in cash, yet our prices progressively declined. All this shows that our prices would have decreased greatly after 1819, by the mere operation of peace, had there been no return to cash payments. It suggests also a consideration of considerable importance at the present moment, namely, that we ought to form a very moderate estimate of the effect that a return to small notes would produce on prices. That measure would tend to arrest the progress of distress, by preventing a further fall of prices; but it would be too much to expect that it could cause them to be reinstated, or to rise in any material degree.

It is a remarkable fact, that the difference in value between gold and bank paper was very slight for a length of time after the bank-notes had ceased to be payable in cash. During no less than twelve years after 1797, the depreciation of our bank paper seldom reached five or six per cent, and that only at intervals when the import of foreign corn, as in 1801, or the payment of large subsidies, as in 1805, brought down our exchanges with the Continent. At last, in 1809, the fall of the exchanges, and the depreciation of bank-notes, became very serious, and continued to be so during the remainder of the war. The causes were, the expense of the war in Portugal and Spain, which could not be defrayed by bills or bank-notes, but required a great deal of coin; and the stoppage, by our orders, in council, of the trade of America with the Continent of Europe, and of the large remittances to England arising from that trade.

These facts ought to be carefully considered, for they enable us to make a distinction of great importance in regard to bank paper when not convertible into cash. Irregular as such paper is, it may, when issued by so respectable an establishment as the Bank of England, and received and circulated freely for the purposes of sound money, such as paying taxes, making purchases, and discharging debts, maintain the value of coin for many years. It falls only when large sums are required abroad, and the payment of them must of course take place in gold and silver. It was thus that our bank paper, after so long maintaining its value, fell so suddenly and to so great an extent after 1809. From that time forward it proved a most unprofitable mode of paying on the Continent; while in this country it continued to circulate without any perceptible loss.

This difference in the local value of our notes, their depreciation abroad while their value was maintained at home, was long unperceived by the public. The want of this distinction accounts for a great part of the contradiction that prevailed on the bullion question. Of the various witnesses examined before the committee in 1810, a number insisted positively, and without qualification, that our bank

paper was depreciated, and an equal number that it was not. writers of the report maintained the former, and alleged that the depreciation arose from over-issue; but they were wholly unable to reconcile their opinion with facts, for it was contradicted by the official returns from the Bank, which showed that there was no necessary connection between the amount of the notes in circulation and the degree of their depreciation. What was the result of this singular discrepancy? Each opinion had its advocates, and perhaps in equal number, until 1814, when on the return of Bonaparte from Elba, an apprehension by the public of immediate war caused our exchanges with the Continent, and consequently our bank-notes, compared with specie, to fall ten per cent in one week. A few months afterwards, on the close of the war, the exchanges and bank paper were promptly reinstated, and all without altering the quantity of notes in circulation; for it had neither been increased at the time their value fell, nor contracted when it recovered.

These remarkable facts were observed by the late Mr. Horner, and led his candid mind to review its former impressions. He then felt that in the bullion report he had carried too far the charge of overissue by the Bank, and made an admission to that effect before his death to Mr. William Blake, the author of two very able pamphlets

on subjects connected with the currency.

It appears, therefore, that the depreciation of our bank paper, compared to coin, though eventually great, was local and temporary. It applied strongly to foreign parts, but at home its effect was far from being general, and affected chiefly the articles which we were in the habit of importing from the Continent. Of these, corn was by far the most important. It happened unfortunately that the crops of 1809 and 1811 were both deficient, and that large imports were indispensable: hence a rise in our corn markets to a degree which would certainly not have taken place had not our currency been greatly de-

preciated on the Continent.

We are thus enabled to perceive the great defect in the report of the bullion committee in 1810; a defect which was productive of very general perplexity. It consisted in making no distinction between two things which were very different; the rise of prices in consequence of the war, and the rise from the depreciation of our bank paper. The bullion report implied a belief that the two were coıncident in point both of time and amount; whereas with regard to time, the rise of prices from the war had begun in 1795, before our bank paper could be depreciated; and as to amount, it (the rise of prices) had reached the height of thirty or forty per cent, compared to the prices of 1792, at a time (1805, 1806) when the inferiority of our paper to coin was not above five or six per cent. In short, the rise of prices began soon after the war, and lasted twenty years without intermission; whilst the depreciation of our bank notes was slight and temporary until 1809, and prevailed to a serious extent during little more than five or six years.

Enough has now been stated to show the importance of studying the princ ples of trade, leading as they do to conclusions very different

from those of the multitude. How few men would have believed, half a century ago, that after the separation of the North-American colonies our trade with them would be greater than ever! How few would formerly have believed that, of the French public, described as so eager for war, nine persons in ten are anxious for peace; regarding war, at least war with Eugland, as the greatest misfortune that could befall their country! Equally unprepared were many persons to believe that, amidst all the distress of late years, amidst the general fall of prices, and the decline of wages, salaries, and incomes, the real wealth of this country, and the yearly amount of our manufacturing and agricultural produce, have been steadily on the increase. Such are a few of the results of the study of the principles of commerce; results sufficiently gratifying to repay that anxious investigation, that long-continued and pains-taking research, which are indispensable to place our conclusions on a sure basis.

### THE STANDARD OF GOLD AND SILVER.

From the London Economist, November, 1855.

THE inconvenience, nay the actual vice of a double standard of currency is becoming more and more apparent in the experience of France, and is tending more than any one is aware of, to aggravate the present difficulties in the money markets of that country and of England, and it has been at least one of the causes which have led to them. It is said, and we believe with truth, that the Bank of France has succeeded in obtaining from the Bank of Amsterdam a loan of silver against securities to the amount of £1,400,000, and that a new silver coinage is immediately to be made therewith. We would invoke the attention of the French Government to the fact that, without an alteration of their existing laws, such a course would only lead to the most momentary relief, and that, while it will expose it to great expenses, will in the end, and that before long, only tend to aggravate the general drain of bullion from Europe. This is an interesting question, as illustrating the mischief of a departure from a clear and well-defined theory in currency, that it is impossible to maintain stability except by the adoption of a single standard of value. This will become self-evident when it is considered that every obligation expressed in the current money of account ought to have an unvarying reference to a fixed quantity. That condition can easily be obtained if a single metal be selected as the standard, of which the money in account expresses a given quantity. But the moment the money in account, and consequently all the obligations expressed by it, represents given quantities of more than one of the precious metals, it must be plain that the obligations will vary, just as the metals may vary in their intrinsic value in relation to each other, and that the debtor having the option of paying in the one or the other,

will always select the cheapest mode of discharging his debt. A most interesting illustration of all the changes to which a double standard is exposed is furnished by the consequences which during the last few years have flowed from it in France.

It was we think in 1802, that the present fixed relation between gold and silver in the currency of France was fixed by law. It was then determined that coins of both metals should be a legal tender to an unlimited amount, and, according to the then existing intrinsic values of the two metals, it was fixed precisely what quantity of silver should be contained in the silver coins, and what quantity of gold in the gold coins, and which resulted, of course, in precisely the same value being in twenty one-franc silver coins and in a single twenty-franc gold coin. At the moment the two were exactly of the same value, and no preference would therefore exist for the use of the one over the other. This, however, did not long last; for although the relative values of gold and silver have varied less during the last half-century than at any other period of the world, it must be remembered that the most minute variation will furnish a sufficient motive for preference in articles of such high and such well-ascertained and universal value as the precious metals. It was not long, therefore, before the more abundant supply of silver somewhat reduced its intrinsic value in relation to gold, and thus gave it a preference in the currency of France. All payments were made in silver; the coin in circulation consisted almost exclusively of silver; and if the creditor required gold for any purpose he could not obtain it, even from the bank, without the payment of a premium equal to the difference between the intrinsic value of that metal and that of silver, in which the debtor was entitled to discharge his debt. To all intents and purposes, therefore, though there was in theory a double standard, there was in practice only a single metal in use, and that the cheapest; and it is obvious that it must always be so when a choice is given to the debtor to discharge his obligations in two standards. In point of fact, therefore, a double standard is a mere contrivance by which the debtor is given the choice of discharging his debts in one of two ways, whichever at the moment shall be the cheapest.

But the vice of a double standard does not stop here, as the present state of France amply illustrates. So long as the lowest-priced metal, of which the small and subordinate coins of a country consist, continues to be the cheapest in the rating according to law, little inconvenience will accrue in the daily transactions of a country from a double standard. Thus, in France, so long as silver was cheapest, the only effect was that the whole currency consisted of the coins of that metal, and there was an abundant supply of those coins from the lowest denomination to the highest. The only inconvenience was, that in receiving large sums in coin, the weight in silver was about fifteen times greater than it would have been in gold. But that was all; for every purpose that could be answered by gold coins of twenty france each could equally be performed by silver coins of five

The debtor, true to the principle which we have described, has ac-

cordingly preferred to pay in gold; silver coins have rapidly disappeared from circulation, and gold coins have taken their place. The coinage of the French Mint, which in former years used to consist of about £40,000 a year of gold, and about £4,000,000 of silver, consisted in 1854 of £20,000,000 of gold, and about £8,000 of silver coins. But as silver disappears and gold takes its place, the want of small subordinate coins to perform the ordinary daily transactions of life is becoming a great inconvenience. Silver, as we have said, could perform all the purposes of gold. Whether a payment was of one franc or of one hundred francs, it could easily be made in silver. But not so in gold, which cannot be coined into very small denominations. It is true an attempt has been made to remedy this inconvenience by coining gold five-franc pieces, but not only is that coinage extremely expensive, but even when adopted the want of small coins is most imperfectly met, and it is obvious that unless some change is made in the law, silver coin, because that metal is the most valuable. will continue to be abstracted from the circulation till the currency comes to a dead lock, which could only be relieved by the public voluntarily attaching a premium to the smallest denomination of coins, that is by adopting a value of 110 cents to the silver franc coin in place of 100 cents which it would still represent in money of

But the inconvenience does not stop here. In China and throughout the whole of the East, silver is the only metal in circulation, and accepted as a medium of exchange. Gold is everywhere excluded. In consequence, then, of silver having in France, by force of law, for the last five years represented a lower intrinsic value in relation to gold than in the markets of the world, it has been a most profitable operation to purchase silver in France with gold, and to ship it to the East. For a very long time these shipments have represented upon an average about half a million sterling in each month. Had silver in France represented its full intrinsic value, this operation could not have taken place, and, as gold would not have answered the purpose, an immense amount of bullion, which has found its way to the East to be hoarded, would have remained in the markets of Europe.

Well, what will happen if the French Government make a new coinage with the silver obtained from the Bank of Amsterdam? New coins of full weight will pass from the bank to the public, will be bought up with gold, will be secretly melted in spite of any law, and exported to the East at a great profit. The French Government will thus incur the expense of the coinage in vain, the French public will be soon deprived of the convenience of the coin, and the European markets will be further drained of bullion, only in order to swell the already enormous hoards in the East. To prevent these evils the French Government have two plans from which to choose—they may de-moneytise gold and make silver the only legal tender; or they may follow the example of England, and, adopting gold as the one standard of value, place their subordinate silver coins in the po sition of tokens not representing in intrinsic value the nominal rate they represent in the currency, and of limited amount of legal tender. as British silver is limited to payments not exceeding forty shillings.

### USURY LAWS OF THE STATE OF NEW-YORK.

### Communicated to the Bankers' Magazine.

In a recent conversation with a friend from the western part of this State, he remarked, that he was not familiar with all the provisions of our Usury Laws, but had formerly approved their severity, because he had now and then heard instances of great extortion for the use of money, by dealers in his own immediate neighborhood.

He had, however, since ascertained, that these instances of heartless grinding have all arisen during the existence of a law that it was hoped would prevent them; that, so far from operating as a check, the law, as now framed, was the immediate cause of greatly-increased expense

and embarrassment in raising money.

As the attention of traders and others, in the country as well as in the city, was drawn to the consideration of these features, there was, as he said, a growing feeling in the country in favor of a repeal or thorough modification of the statute.

This somewhat casual interview with our friend from the "rural districts" suggested the thought of again looking at what our Chamber of Commerce are doing towards securing a reform in our Usury Laws.

Following out this purpose, we have carefully examined their documents, and think they have met the subject matter fairly, so far as they have gone, and yet there are some features in the case which none of their papers have touched with sufficient plainness. It might not perhaps comport with the dignity of that time-honored institution to arraign motives, or to hint at any selfish views by which their opponents may have been governed in their efforts to stop the wished-for relaxation. They have therefore argued the question the same as if all the parties to the discussion were honestly seeking the truth.

The object of the present brief paper is to name certain features which the Chamber have passed in silence; and in thus prosecuting this examination, any fair-minded man will see that our present Usury Laws have not been continued with the same well-intended purpose that caused their enactment.

We shall find, in nearly all of our flourishing towns and villages, some one or more individuals, combining the dealing in small loans with their practice in the more humble walks of the legal profession. In our cities, too, the same business is practised; but in the multifarious callings and duties of city life, we cannot so plainly trace out and bring to light what is done in the smaller lendings of money.

In the quiet monotony of country life, this trade may, perhaps, be rendered more temptingly lucrative, by the turns and manœuvres that professed dealers in law and money declare can be indulged in with

impunity.

Usurers, with elastic consciences, naturally draw toward thriving villages, where they may find some adventurous borrowers, who seem actually to relish the excitement of evading some law. Hence it is,

that when a loan of some fifty to a hundred dollars, or more, is wanted, the applicant is told by his legal adviser, that by the cautious exercise of a proper degree of skill, the lender can escape the rebuking check of our all-virtuous usury statute.

This skill is, of course, an endowment quite too rare and valuable not to be well paid for. Consequently, the borrower must pay a generous price for a rake or a pitchfork, purchased of the lender, and must also pay well to the lawyer for making out a chattel-mortgage or some other quite needless paper; or he must cut up the sum borrowed into half a dozen little pieces, so as to enter up a confession of judgment, with *fees*, upon each separate confession.

Now, if the parties dealing, would only turn to the statute and read for themselves, they would see that this law cannot be evaded, unless such evasion is winked at in consequence of the extreme unpopularity of the law. Both parties (borrower and lender) can, under that anomalous statute, be examined under oath, and must answer all ques-

tions as to all "devices and mental reservations."

Nothing but the deep and almost universal contempt towards parties who plead usury, enables its violators to escape. Grand-jurors scoff at it, and have again and again presented it as a "public evil," instead of reporting to the courts every infraction of it, as is expressly enjoined upon them to do, in the very terms of the act itself. Judges upon the bench speak lightly of the statute, remarking that they have "never heard of any indictment under its criminal features, and never expect to hear of any."

And yet, notwithstanding all this, our rural usurers and our city usurers will ply our Albany politicians with the notion that our farming and other interests in the interior of our State, cherish a deep feeling against "disturbing the Usury Law." That the raising the issue would be regarded with disfavor by voters away out somewhere, it is

not precisely known where.

This is, in part, the grand secret of our having been so long afflicted with this abominable law.

The worst of Shylocks germinate and thrive where this law shows its deformities the most plainly. Expunge it, and we stop at once all the delusive fooleries about selling farming implements, entering up ridiculous judgments, delivering fancy stocks ahead, etc.

For a time, certain parties in the enjoyment of spoils and costs under this law, indulged in a sort of pungent waggery about Wall-street lenders going to Albany to ask the distinguished privilege of "drawing blood and cutting flesh" ad libitum, meaning, we in charity presume, only to use a poetic figure for drawing high interest, and not bona-fide blood.

The very moment the true import and literal meaning of this classic flourish could be seen, it was put down, by simply showing that the petitioners all wanted *low interest*.

Another move of the restriction party was, to look up a sort of text-book, that had been written many years ago, by a gentleman in Rhode-Island; the tendency of which book, or its purpose, seemed to be to awaken our sympathies towards certain States out West, that

had been almost literally ground into powder, merely by some temporary lenity in their Usury Laws. Wisconsin has been, again and again, cited as a State that was once ruined by the casual absence of a Usury Law for a short time. The chasm where that devoted State once stood, has since been filled by a very prosperous section of country, bearing the same name; and, strange as it may seem to our stringency friends, has actually prospered under the Usury Law that we New-Yorkers would gladly accept as a compromise; or, we would most willingly accept the Usury Laws of any one of the States named by the famous writer from Rhode-Island; and the more especially should we prefer the law now in operation in his own State.

The writer hereof was born and brought up in the "rural districts," and in what is here said, is very far from censuring country more than city, in regard to the improper and burthensome stratagems connected

with the loaning of money.

On the contrary, he repels the charge that farmers and country merchants are so wanting in intelligence as to suppose we need such a Usury Law as ours, either to improve our currency or to protect borrowers.

Indeed, we do not meet one man in ten in the country who either thinks or cares about usury at all, one way or the other. The truth is, the regular Shylocks in the country and in our cities are very much alike; they merely vary according to the circumstances of the two classes, in the modus operandi of applying the screw.

The city usurer finds the most needy victims, and thus his power to extort is greater, whilst the country usurer has more political intelligence, therefore excels in the wire-pulling, so useful in keeping up the notion about the great depth of the "prejudice" against usury.

In sober earnest, let all good citizens, in town and country, unite in the honest inquiry, whether the strong rebellion that is everywhere rising up against this arrogant and every way unwarrantable oppression, ought not to be listened to with favor and respect, to the end that the evil complained of may cease. Progress.

November, 1855.

Note.—The provisions of this Law of 1837, still in force, are these:

The lender who receives more than seven per cent per annum, forfeits the whole sum lent; is also liable to a fine of one thousand dollars and six months' imprisonment. Both borrower and lender may be made witnesses in the civil trial.

Under the *criminal* part of the process, however, the defendant, it would seem, is technically shielded from the harm of any confessions that may have been forced from him on the civil trial. The law also declares it to be the duty of all Courts of Justice to charge the grand-juries especially to inquire into any violations of the Act. To this no grand-jury has ever paid any attention whatever.

The following memorial has been signed by a large number of merchants, farmers, mechanics, and others, in reference to the Usury

To the Honorable the Legislature of the State of New-York, in Senate and Assembly convened:

The memorial of the undersigned, agriculturists, mechanics, manufacturers, traders, and others, of the State of New-York, respectfully

represents that they are residents of the interior sections of the State, and, being fully sensible of the perfect identity of interest between country and city, are desirous of uniting with their fellow-citizens of the larger trading emporiums of the State in the inquiries now being made relative to the declared evils of our present laws regulating the interest of money.

Your memorialists are aware of the general import of the petitions and documents that have been sent from the city of New-York. Among the many points embraced therein, the undersigned notice the allegation that the negotiations for loans of money are much more complicated, and every way more burthensome and expensive, than they were before the present Usury Laws existed; also, that the general principles of said law do not harmonize with the moral sense of the community, as is shown by the fact that its criminal features have never been acted upon at all, although instances of direct as well as constructive usury are occurring every day, all over the business portions of our State. The aforesaid city documents also declare that the appeal for a change in the law comes mainly from the borrowing classes of business men, for whose protection it was originally enacted, they alleging that the protection thus hoped for has never been secured.

Without at present entering upon any arguments as to the merits or demerits of the Usury Laws, your memorialists would respectfully add that they have reason to believe the above charges are true. Connecting these with many other averments that are embraced in the various documents from the city of New-York and other commercial localities, your memorialists would most respectfully ask your honorable bodies to empower a committee of the Legislature to institute a regular and careful hearing and examination into both sides of a question so vitally important in the movements of currency, and thereupon make such modifications in our Usury Laws as in your wisdom may seem advisable.

### FINANCES OF TENNESSEE.

### I. Public Debt and Revenue. II. Banks. III. Railroads.

Ox the 8th instant, the Governor of Tennessee sent in his annual message to the Legislature. We extract the following relating to the finances of the State. The actual indebtedness of the State at this time is as follows:

| Five and a quarter per cent bonds issued for stocks in internal improvement companies. |            | ee. |
|--|------------|-----|
| Five per cent bonds issued for stock in internal improvement com-                      | \$221,210  | •   |
| panies,  | 1,824,440  | 00  |
| Six per cent bonds issued for capital in the Bank of Tennessea                         | 1.000.000  | 00  |
| Six per cent bonds issued for building State Capitol.                                  | 691,000    | 00  |
| For stock in the Union Bank,   | 250,000    | 00  |
| Amounting to   | 88.092.856 | 66  |

In addition to the above actual indebtedness, the State is liable for bonds loaned and indorsed, as follows:

| То | the | East Tennessee & Georgia Railroad,                  | \$870,000 |
|----|-----|---|-----------|
|    | u   | Tennesse and Alabama Railroad,                      | 300,000   |
|    | 44  | Memphis & Ohio Railroad,                            | 340,000   |
|    | u   | East-Tennessee & Virginia Railroad,                 |           |
|    | u   | Memphis & Charleston Railroad,                      | 740,000   |
|    | ##  | McMinnville and Manchester Railroad,                | 300,000   |
|    | u   | Mississippi & Tennessee Railroad,                   | 98,000    |
|    | u   | Mississippi & Dyersburgh Plank Road,                | 25,000    |
|    | "   | Mansker's Creek & Springfield Turnpike, (indorsed,) | 10,000    |
|    | 44  | Nashville & Chattanooga Railroad, (indorsed,)       | 1,500,000 |
|    |     | Amounting to,                                       | 4,752,000 |

Making the whole liabilities of the State for bonds issued for stock, loaned and indorsed to internal improvement companies, amount to \$8,744,856.66.

It will devolve on you to provide for the payment of \$125,000 of the bonds which were issued for stock in the Union Bank, falling due first of January, 1858, and \$50,000 bonds issued for building the State Capitol, falling due first of April for the same year. It is for the Legislature to determine whether these bonds shall be paid by imposing additional taxes on the people or out of the stocks owned by the State.

I lay before you for examination, the original cost and present estimated value of the State stocks, and also the value of the taxable property and number of taxable polls, made out by the Comptroller of the Treasury:

| Slock.                                | Original Cost,     | Estimated<br>Present Valus. |
|---------------------------------------|--------------------|-----------------------------|
| Bank of Tennessee,                    | 1,000,000 00       | \$1,000,000                 |
| Union Bank,                           | 655,000 00         | 650,000                     |
| East-Tennessee & Georgia Railroad,    | 650,000 00         | 300,000                     |
| Franklin & Columbia Turnpike          | 75,950 00          | 56,925                      |
| Lebanon & Nashville Turnpike,         | 80,000 00          | 48,266                      |
| Nolensville Turnpike,                 | 47,000 <b>00</b>   | 11,750                      |
| Nashville & Charlotte Turnpike,       | 30,000 00          | 20,000                      |
| Lebanon & Sparta Turnpike,            | 85,000 00          | 21,170                      |
| Columbia Central Turnpike,            | 139,000 00         | 21,170                      |
| Nashville & Kentucky Turnpike,        | 50,000 <b>00</b>   | 12,500                      |
| Clarksville & Russellville Turnpike,  | 37,500 00          | 9,000                       |
| Columbia, Pulaski & Elkston Turnpike, | 126,600 00         | 12,233                      |
| Nashville & Murfreesboro Tumpike,     | 66,666 66          | <b>3</b> 0,5 <b>30</b>      |
| Gallatin & Cumberland Turnpike,       | 6,000 00           | 5,283                       |
| Gallatin Turnpike,                    | 130,000 0 <b>0</b> | 26,000                      |
| Cumberland & Stone River Turnpike,    | 119,000 00         | 20,000                      |
| Total,                                | \$3,292,716 66     | \$2,244,827                 |

The above turnpike companies pay six per cent on the estimated value.

| Total | value of | taxable property,                       | 9,011,047 | 81 |
|-------|----------|---|-----------|----|
| 64    | number   | of taxable polls,                       | 100,000   | 00 |

At the last session of the Legislature, an act was passed, directing the Governor and Comptroller to invest the dividends arising from the stock in the Union and Planter's Banks in the six per cent bonds. We have received, on account of said bonds, one hundred and fifty-five thousand two hundred and forty-nine dollars and thirty-six cents; and have contracted with the Bank of Tennessee for the whole amount in bonds.—Extracts from Governor Johnson's Message to the Legislature, Oct. 8, 1855.

### BANKS.

The condition of the Bank of Tennessee will be fully set forth and made known in a report which will be made and submitted to the General Assembly, by the President and Directors of that institution at an early day. It will be seen, from a careful examination of the report, that the principal Bank and branches have been conducted with great efficiency in the ordinary banking transactions, and especially so in collecting and securing a large portion of what is called the suspended debt. More of this debt has been collected and secured in the last two years than at any former period.

In regard to this institution, I still adhere to my former opinion, as submitted to the last Legislature, that the principal Bank and its branches ought to be put into gradual liquidation, and that the present is an auspicious time for such gradual liquidation, giving ample and reasonable time to all persons who are indebted to the institution, to make arrangements for paying the amount they may owe the principal Bank and its branches. The process of winding up the institution at the present time, can be made so gradual and easy as not to embarrass the indebted portion of the community in the smallest de-

A number of banks have gone into operation under a law passed by the General Assembly of 1851-2, and others no doubt will soon In addition to this, the last Legislature incorporated seven stock banks, which will more than supply the vacuum created by the withdrawal or the winding up of the Bank of Tennessee, and furnish all the banking facilities needed by the whole commercial and business portion of the country. As the capital of the Bank is withdrawn from circulation, it can be profitably invested in the bonds of the State, thereby again making its way into the general circulation, and at the same time creating a home market for the bonds of the State equal to the entire assets of the Bank. The bonds are bearing an interest of six per cent per annum, which will in the end yield a greater profit to the State, making it the safest and most judicious investment that can be made with the Common School and other funds, which now constitute the capital of the Bank of Tennessee, and which is under the control of the Legislature.

If the State can in any reasonable time dispose of the stock owned in the Union & Planters' Bank upon good and reasonable terms, and all other stocks owned by the State in turnpikes and railroads, it would be equally wise, safe, and judicious, to make a like investment with the proceeds of such stocks in the six per cent bonds of the

State. The number of internal improvement works which have been commenced by the various companies, and which are entitled to aid by law, from the State, and a number of others that in all probability will be commenced, which will require the issuance of a large amount of State bonds, amounting to many millions of dollars, will absorb the entire capital of the State Bank, and the proceeds of all the stocks owned by the State, if they are invested in the bonds of the State as already indicated.

The Free Banking Law, as it is commonly called, requires revision and amendment, and should be so modified as to require all applicants for banking privileges under it to deposit, as a greater security to note-holders, with the Comptroller of the Treasury, twenty-five per cent more in bonds than they receive notes in exchange for circulation. The note-holders are entitled to this additional security to meet any reasonable depreciation which may take place in the value and sale of the bonds of the State, when thrown into market for sale. And as a further protection to the community, there should be a law passed prohibiting the circulation of any bank-note of a less denomination than five dollars, in the State. We have seen within the last few years gold and silver driven almost entirely out of circulation for all the ordinary business transactions of the country, by the excessive issue of small notes by the various banks throughout the State. The passage of such a law would in a short time restore to circulation for all ordinary purposes, gold and silver, which cannot depreciate in the hands of the small and unsuspecting dealers, as is often the case with bank-notes, by the depreciation of small notes or the breaking of banks. The necessity of the passage of such a law must be obvious to all, and it is wholly unnecessary for me to make any argument to the Legislature or to the country in its favor.

There is one other suggestion that I will make in regard to the Free Banking Law. The law should be so amended as to fix definitely the rates at which notes should be discounted, by all persons banking under that law, thereby making the discounts equal and uniform in banking operations throughout the State.

THE BANK OF TENNESSEE.—The President and Directors of the Bank of Tennessee have made an elaborate report of the condition of the institution to the Legislature, from which we condense the following summary:

In the report to the last Legislature, the "nominal capital" of the Bank was stated to be \$2,750,001; the actual capital, \$2,399,652.54.

By the act of 3d of March, 1854, the President and Directors are directed to "charge off to account of profit and loss," such debts as they may esteem "hopelessly bad," and to retain from the profits of the Bank such sum as may be necessary to supply the place of such debts, so as not to reduce the capital below its "nominal amount."

The Board have had a careful examination made of the suspended debt, by which it appears, after deducting the reserved fund of profits, which amounted on the 1st of July last to \$177,552.40, leaves, a balance of lost debt of \$211,433.50, which will have to be supplied from the profits of the Bank accruing after the 1st of July last, to

increase the real capital to its nominal amount, so that by the close of the present bank year, the capital will be very nearly restored to what it was on the 1st of July, 1853.

The whole of the debts due the Bank, except debts due from other banks, which were considered as cash, amounted on the 1st of July last, (and the whole of which is believed to be available,) to \$4,004,413.50.

The individual cash deposits in the Bank have been:

| On July  | 1, 1849,           | they  | amounted    | to                                      | \$385,439 37 |

|          |                    |       |             | bts from the Nashville Distric          |              |
| put in   | suit after         | the   | 1st of July | 7,                                      | 15,012 93    |

The report closes with a well-considered argument in favor of winding up the affairs of the Bank.

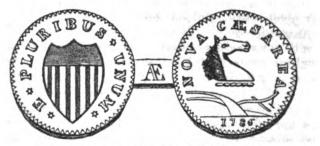

Leaving a balance to be supplied out of the annual profits, to restore the capital of the Bank.....

### PUBLIC ROADS.

I would also call your attention to my former recommendation on this subject:

"Our whole system of Public Roads is exceedingly defective, perhaps more so than in any other State in the Union, imposing the burden of keeping it up upon that portion of our fellow-citizens least able to bear it, and who have the least use for it after it is kept up. Many persons are compelled to work on the public roads many days in the year, who have not the time to spare to do so, without pay, and the necessities of whose families need the proceeds of their entire labor for their support; while on the other hand, there are many who are exempt by law from working on the public roads, who are either able physically to work them, or pecuniarily to pay for having it done, and who derive the greatest benefit from good roads when they are made, by the enhanced value good roads impart to their property, and by increasing the comforts and facilities of travelling over them

### NEW-JERSEY COINS.

Correspondence of the Bankers' Magazine.

New-York, Oct. 30, 1855.

To J. SMITH HOMANS, Esq. :

Dear Sir: I notice that you have copied in the October number of your magazine my article upon the New-Jersey Horse Head Coins, which originally appeared in the columns of the Newark Daily Advertiser. Presuming that by so doing you take some interest in the subject, I take the liberty of sending you a wood-cut of one of the coins. I have understood that the copper from which the New-Jersey coins were made, was taken from the Schuyler Mine in that State, a locality so remarkable for its rich veins, that some years ago Messrs. Botta and Watt, proprietors of the Solo Mint, Birmingham, England, made an offer to purchase all the ore that could be raised, and agreed to enter into a contract for that purpose. The Schuyler Mine derives its name from Arant Schuyler, who discovered it in the year 1719. The ore was uncommonly pure, and required but small expense to convert it into metal.

Very truly yours, Chas. I. Bushnell.

### THE COAL TRADE OF GREAT BRITAIN.

Memoirs of the Geological Survey of Great Britain and of the Museum of Practical Geology.—Mineral Statistics of the United Kingdom of Great Britain and Ireland for 1853 and 1854. By Robert Hunt. Longman & Co.

In his Introduction to the statistics contained in these Memoirs, Mr. Hunt remarks on the discrepancies between previous statements of the annual produce of coal in Great Britain. Thus, Mr. J. C. Taylor estimates it at 31,500,000 tons; Mr. J. R. M'Culloch at 34,600,000; Mr. Braithwaite Poole at 34,000,000; Mr. T. Y. Hall at 56,550,000; "a particularly careful writer" quoted by Mr. Hall, at 52,000,000; and Mr. J Dickinson, Inspector of Coal Mines, at 54,000,000. These calculations were not all made at the same time, but they range within a period of ten years, and a difference of 20,000,000 tons is to be noted in two statements almost simultaneously made. Obviously, therefore, new lights were required upon this subject—especially as no question connected with our national prosperity is more interesting than that of the extent and probable duration of our coal-fields. Upon this point, also, opinions stand as widely apart as the Arctic from the Antarctic circle. There are those who predict that myriads of years will not see those black Procrustean beds exhausted, while others inquire ominously "What are we to do for fuel when the inevitable scarcity sets in?" A third, and a very comfortable idea is, that in the hidden laboratories of the earth Nature is perpetually changing a certain substance into coal; but we need not say, that such discussions are often carried on out of the circle of science, so that many good citizens are soothed or frightened by theories which have no place in the philosophy of practical geologists.

Mr. Hunt set out with a plan as well as a purpose. Circular letters were distributed over the coal districts requesting the supply of details respecting the produce of the collieries in each field. Of those, "a considerable number" were returned, giving the desired information; but the result was necessarily incomplete. Every coal-producing county in England and Wales was visited, however, and personal inquiries were made, in reply to which the owners and the lessees of the collieries, often at the expense of much labor to themselves, afforded clear and minute information. Other methods were adopted to check the calculations thus made, such as an examination of the sea and railway transit of coals—and it may consequently be assumed that a tolerable approximation to exactitude has been obtained. At all events, since the Report is to be published annually, with corrections and additions, it will be long before our coal statistics are placed

upon a satisfactory basis.

It should be mentioned that the Memoirs include, also, returns of other mineral produce in Great Britain and Ireland. But our first interest centres in the coal. From 2397 collieries enumerated in

the United Kingdom, 64,661,401 tons were raised, worth nearly 15,000,000l., or nearly 9,000,000 tons above the quantity stated in the highest figures previously quoted—those of Mr. T. Y. Hall. Of tin, the annual produce is stated at 5763 tons, which, at from 1121. to 118l. a ton, would be worth nearly 700,000l. Of copper, 13,000 tons were produced in 1854, worth about 1,229,000l; of lead, 54,000 tons; and of silver, 700,000 ounces. Of pig-iron the produce was 3,069,838 tons, valued at 9,500,000l. Mr. Hunt has ascertained that more than 300,000 persons are employed in mining operations in Great Britain—nearly one third of them being males under twenty, while nearly 9000 are females, and of those the larger proportion under twenty years of age. It formed no part of Mr. Hunt's design to enter upon the investigation how long our abundant stores of coal are likely to endure, and how far the colliers' operations may be extended without forestalling the supplies of future years. We infer that he shares none of the alarm which has in some quarters been expressed.—London Athenœum.

### LEGAL MISCELLANY.

### IMPORTANT CASE AS TO LLEGAL CONTRACTS.

Before the New-York Court of Appeals: GILLET, Receiver of the St. Lawrence Bank, against Benjamin Phillips. Decided October Term, 1855.

THE St. Lawrence Bank was organized in 1838, under the general banking law of that year, and in December, 1841, suspended specie payments.

In the spring of 1842, the Cashier sold and transferred three promissory notes belonging to the Bank, made by George Armstrong, and amounting to about \$2000, to the defendant, Phillips, for the sum of about \$1200. The defendant was then one of the Directors of the Bank, and had been from its organization.

The object of the Cashier in making the sale, was to obtain funds to pay a debt of \$2000, which the St. Lawrence Bank owed to the American Exchange Bank, the payment of which was secured by a pledge of \$5000 of the circulating notes of the St. Lawrence Bank. The money paid by the defendant was so applied. There had been no previous resolution of the Board of Directors authorizing the sale of the notes by the Cashier.

On the appointment of the Receiver, he filed a bill, in the late Court of Chancery, to set aside the sale of the notes, on the ground that the transfer was illegal.

Gardiner, C. J. There is no necessity of going beyond the minutes of the Bank to ascertain its condition at the time when the transfer of the notes in controversy was made to the defendant. Its

insolvency was as plainly written in the books of the institution as though the fact had been there recorded in so many words. It appears that in December, 1841, the Bank suspended payment by resolution. On the same day all its effects were transferred to the Cashier in trust, to indemnify some or all of its directors for responsibilities by them incurred for the corporation. On the 10th of the following month, another assignment of bonds and mortgages, then in the Canal Bank, was made to secure liabilities; and on the 13th, the exigencies of the institution were such as to call for a meeting of the stockholders.

At this meeting the defendant was present, and as one of the committee for that purpose, reported certain resolutions, which were adopted; which, in substance, affirmed the embarrassed situation of the Bank, and recommended to its officers to reduce its circulation and liabilities, and restore it to a condition in which it might resume its business. The proof is, that the corporation transacted no business after its suspension, in December, 1841, except to wind up its affairs, until it went into the hands of a Receiver. So much for the fact of insolvency. Under these circumstances, in April, 1842, the defendant, who was then, and had been prior to and during the time of the transactions above-mentioned, a director, purchased of the Cashier, assuming to contract for the corporation, the three notes in question, amounting to over two thousand dollars, at a discount of forty per cent, which were then and there transferred to him accordingly. The notes were part of the assets of the Bank; were deemed good and available by the parties, and for aught that appears, were so. By the 8th section of the Act of Monied Corporations, 1 R. S., 592, no assignment or transfer, not authorized by a previous resolution of its Board of Directors. shall be made by such corporation of any of its effects exceeding in value one thousand dollars. This section is not to apply to issuing of promissory notes or other evidences of debt, by its officers, in the transaction of its ordinary business, nor to payments in specie or other current money, or in bank bills; nor shall it be construed to render void any such assignment or transfer in the hands of a purchaser for valuable consideration and without notice.

The transfer in this case, it will be perceived, falls directly within the prohibition of the first clause of the section. The defendant does not allege in his answer, that the sale of the notes was authorized by a previous resolution of the Board of Directors; and no such resolution is proved or existed. On the contrary, he negatives any authority of the kind, by insisting that the sale was made "under the general advice and direction of the Board of Directors and the stockholders, to get up the circulation of the Bank in the best and most practicable manner."

Nor does the defendant claim the benefit of any of the exceptions contained in the eighth section, but the last, and to this he is not entitled. For he was in no sense a purchaser without notice. Want of notice is not available as a defence to a vendee, who at the time of the purchase was a director in the corporation, whose property was the subject of the sale. By accepting that office, he assumed a duty to the stockholders and creditors of the Bank, to inform himself of what would

appear by an inspection of the books of the institution, of which he was one of the ostensible managers, and he cannot urge a want of notice arising from a neglect of duty in justification of a transaction, in his own case, which the law presumes unauthorized and illegal. In this instance, the transfer was made by one director, in behalf of the corporation, to another, and both were chargeable with knowledge that the contract which assumed to divest the corporation of its assets, was a violation of the eighth section, in consequence of the omission of the Board to pass the resolution necessary to give it validity. But the defendant, in this case, is affected with something more than constructive notice. He was a director of a bank, at the time actually insolvent, and which, to his knowledge, was not only embarrassed, but had suspended payment for more than four months; and which he was informed, by its Cashier, as he alleges in his answer, was unable from its assets to raise the sum of two thousand dollars to prevent the sacrifice of its circulating notes, then pledged to the American Exchange Bank. No one can read the answer of the defendant, without a conviction that he must have been aware of the probable insolvency of this corporation, unless he closed his eyes to evidence that should have satisfied any man of common intelligence. He must have known, that in this condition, or in contemplation of it, the Bank could make no transfer of its property, or any payment, with a view to prefer one creditor to another; and whether in this condition or not, a transfer of its assets, exceeding one thousand dollars, was prohibited without a previous resolution of the directors. (1 R. S., 591, § 8, 9.)

He knew that he had not aided in the passage of any resolution, or been consulted as director upon that subject. Every presumption was against its existence in the embarrassed condition of the institution. Although negotiating with the fiscal officer of the Bank, he made no inquiry of him or others. He was not misled; but was informed, as he states in his answer, by the Cashier, at the time of the purchase, that "the Board of Directors had authorized, had directed him to take circulating notes of the Bank in payment of debts due to it." The authority thus claimed was a virtual disclaimer of any other, and excluded any presumption of a previous resolution for the transfer for

the notes in controversy.

Under these circumstances, which were equivalent to actual notice of want of authority in the agent of the Bank, the defendant made a purchase of the notes at a discount; which of itself indicated the extreme necessity, if not the hopeless condition of the corporation.

The object of the defendant, as he alleges, was to enable the corporation to pay a debt due the American Exchange Bank, and thereby redeem its circulating notes, pledged to that institution. It is very questionable whether the Bank could at that time make that payment. If the object had been to give a preference to a particular creditor, the payment was forbidden by the 9th section of the act mentioned. Now, when a monied corporation is insolvent, in such a sense, that all its debts cannot probably be discharged from its assets, the payment of any one creditor in full, is a preference within the meaning of the statute. That the creditor holds security will not necessarily legalize

the payment, although that fact might be evidence upon the question of intent, more or less cogent, depending upon the nature and amount of that security. Upon the defendant's own statement, therefore, he made a purchase, prohibited by the 8th section, to enable an insolvent corporation to make a payment prima facie forbidden by the ninth. It is enough for the present case, that he voluntarily aided in the commission of an act expressly prohibited by the statute.

The contract was not only unauthorized, but illegal. No action could be sustained upon it, if executory, in his favor—nor to set it aside, if executed. Nor could it become the foundation of an implied assumpsit in behalf of the offending party. (Broom's Legal Maxims, 349; Smith's Law of Contracts, 121, 187-190; Comyn on Cont., 30; Perkins vs. Savage, 15 Wend., 412; 22 Bl., 379; 3 Taunton, 6; Nellis vs. Clark, 4 Hill, 426; Leavitt vs. Palmer, 3 Comst., 27, and cases

there cited.)

The agreement is equally inoperative to sustain a recoupment, or set-off, which are in the nature of cross-actions, or an equitable lien for the price paid. The money was paid by the defendant to consummate an unlawful bargain. To allow a party to recover it back under these circumstances, would be to encourage a violation of the law, by assuring the offender of indemnity, if the contract was rescinded by creditors; with the chance for a successful speculation, if it was not. It is upon this principle that equity will not enforce contribution, where there has been a fraudulent alienation of the trust estate. (Hill on Trustees, 521.)

The case of Hawley vs. Mancius, 7 J. Ch., 188; and Evertson vs. Tappen, 497, 5 Id., cited by the learned judge, who pronounced the opinion of the Supreme Court, do not seem to me to apply to this case; indeed, they were cited to sustain a proposition founded upon the supposed good faith of the defendant, which, I think, is negatived by the evidence. In both the cases cited, the cestui que trust affirmed the acts of the trustee; and in both the chancellor decided that the purchases were made under the trusts respectively. In this case, the Receiver, as the representative of the creditors, repudiates the sale and demands the notes as the property of the Bank.

The defendant sets up a counter-claim, arising out of his own illegal contract, for money paid in pursuance of it, and this is resisted and

has been allowed by the court below.

The distinction between the present and the cases cited, is too ap-

parent to require comment.

An expression in the testimony of the Cashier is referred to, "that the stockholders passed a resolution, authorizing him to take up the circulation in this way, and the directors authorized witness to do so," as having some bearing on the subject.

The witness, after this statement, immediately proceeded to read the resolutions from the record, and concluded by saying he knew no

other.

Among those resolutions, is one passed by the stockholders in January, 1842, and the only one that there is any pretence was ever adopted.

That resolution speaks for itself, and is a recommendation to the officers of the institution "to proceed in the collection of the debts due and to become due, and in the settlement and reduction of its circulation and liabilities."

This was sound advice, but gives no countenance to a transfer of the assets of the Bank before due at a discount of forty per cent, or in any other way. But the stockholders could no more confer an authority, than an assemblage convened at a town meeting. It is sufficient that they did not assume to do it. The directors probably intended to follow the advice thus given; and the Cashier accordingly informed the defendant that they "authorized him to take up the circulating notes of the Bank in payment of debts due it."

There was, then, no semblance of authority for the transfer. The Supreme Court pronounced the transaction void, and, in my opinion, erred in allowing the defendant the money paid by him on the pur-

chase, and in granting costs.

The judgment should therefore be reversed, and a judgment entered in favor of the Receiver for the value of the notes, or the money collected upon them by the defendant, with costs, in the court below, but not in this court.

F. Kernan, Reporter.

BANK OF ENGLAND DISCOUNTS.—Objections have been taken to a practice in the discount system of the Bank of England, exclusively adopted by that establishment, which often leads, it is considered, to great individual hardship. Whenever the acceptor of any bill which they may hold under discount is announced to have stopped payment, either temporary or otherwise, they send to the person for whom it was discounted, requiring him to refund its amount forthwith, even although it may have nearly three months to run. Against this course, two remonstrances are urged—first, that it is virtually a breach of contract; and, next, that it is calculated to aggravate the difficulties any suspension may occasion, since it is hard enough for the drawer to have to protect the bill at its maturity. To the first of these the obvious reply would be that, if the demand involves a breach of contract, it need not be complied with; but it is complained that there is no choice, inasmuch as resistance would end in the person being deprived of his discount account altogether; but the fact is, the advance is simply one upon security, and there is a fair and customary understanding in such cases, that if the security becomes de-preciated the borrower shall at once meet the difficulty. With regard to the second point, there can be no question that the sudden and often totally unexpected calls which the practice involves might increase commercial distrust, in some cases by causing the drawer to stop as well as the acceptor, when, if allowed the interval before the real maturity of the bill, he would have been able to arrange every thing, and in others by inducing him promptly to secure the Bank at the ultimate expense of the general creditors. In the latter instance, however, the responsibility rests with him, and not with the Bank; while, as respects the general question, as it is optional for the public to take their bills to that institution, or elsewhere, they can not properly complain of conditions to which they have voluntarily rendered themselves liable. It is likewise to be assumed that, although the rule is stringently enforced in an ordinary sense, exceptional circumstances are always taken into consideration; and at the same time there can be little doubt that the constant liability to be called upon to provide for any weak paper that may have been sent in, must be beneficial in stimulating a wholesome prudence on the part of the Bank customers, both with regard to the persons on whom they draw, and the maintenance of a reserve of means to meet any accidents that may occur.

#### BANK ITEMS.

NEW-YORK.—The Importers & Traders' Bank commenced business on Monday, December 10, at 245 Broadway, with a nominal capital of two millions of dollars, of which about \$1,000,000 have been paid in. President, Lucius Hopkins, Esq.; Cashier, George R. Conover, Esq. The following gentlemen compose the first Board of Directors: Lucius Hopkins, Aaron Arnold, Lebbeus B. Ward, W. H. Appleton, George T. Cobb, Alexander Studwell, Silas C. Herring, Gustavus A. Conover, Anthony S. Hope, Daniel S. Schank, Wm. H. Mellen, John Falconer, Henry Ball, David A. Wood, Wm. N. McIntire, Thomas Rigney, Samuel E. Sproulls.

Chemical Bank.—George G. Williams, Esq., for many years discount clerk of the Chemical Bank, 270 Broadway, was elected Cashier of the Bank on the 13th of December, in place of the late J. B. Desdoity, Esq.

New Capital.—The Metropolitan Bank has increased its capital stock one million of dollars, of which twenty-five per cent has been called in, paid. The additional capital, when paid in full, will make the whole amount three millions of dollars.

State Clearing-House.—It is understood that the project of a Clearing-House in this city for the State banks, has been abandoned for the present, the number of institutions which consented to the measure being less than the limit fixed at the Bank Convention. Our Clearing-House for the city banks is working well, and is not only a convenience to the banks themselves, but a check upon bogus and illegitimate banking.

New Bank.—The Park Bank will commence business about the first of February, near the Park. The capital, two millions of dollars, is nearly all subscribed, and the Bank will commence under the most favorable auspices. The increasing business of New-York City, in and near Chambers street and the Park, will afford a new bank ample returns for capital employed.

Oswego County.—The Oswego River Bank, at Fulton, Oswego county, will commence business on the first of January, 1856, with a capital of \$125,000. President, J. J. Wolcott, Esq.; Cashier, D. W. Gardner, Esq.

MASSACHUSETTS.—The Bank of Cape Cod, at Harwich, has commenced business with a capital of \$100,000. President, Christopher Hall; Cashier, Obed Brooks, Jr.

Edgartown.—The Martha's Vineyard Bank, at Edgartown, is now in operation, with a capital of \$100,000. President, D. Fisher, Esq.; Cashier, J. T. Pcase, Esq.

Boston: Grocers' Bank. - At the instance of the Bank Commissioners, an injunction was placed upon the Grocers' Bank by the Supreme Court this morning, in consequence of an irregularity discovered in the issue department. In our previous remarks relative to this institution, we have stated that arrangements were made by the Boston banks to furnish the necessary aid, so that payment should not be suspended. At the meeting on the 24th inst., a committee of five was chosen to furnish all the aid then asked for, which was promptly done on Monday, 26th. At the close of business on Wednesday, it became apparent that they would require a still larger sum on Friday, (Thursday being Thanksgiving,) and measures were taken to furnish all they required, provided such a statement of their affairs as they were to furnish this morning would warrant it, and that they would furnish ample security. The aid of the Bank Commissioners was called in, and they were particularly requested to make a very thorough investigation of the issue on banknote department. This investigation occupied their time until late on Wednesday The result was a discovery of an over-issue of bills to the amount of \$106,000, and they consequently felt compelled to place the Bank in the hands of the legal authorities, for the purpose of further examination. It is but justice to add that so far as the President and Directors are concerned, the irregular acts which have so long characterized the operations of this Bank, appear to be the doings of the Cashier, and have been wholly unknown to them until they were discovered by the Bank Commissioners. This unfortunate interruption in the process of redemption of the Grocers' Bank bills, does not by any means render them unsafe, as the means of the Bank are still ample to protect every dollar of its liabilities, so far as their existence has been discovered. The injunction, we understand, is placed upon the

Bank until December 4th, when it may possibly be removed, if it appears that no further irregularities have been committed.—Boston Journal, November 30.

RHODE-ISLAND.—The Suffolk Bank at Boston does not receive on deposit the notes of the Rhode-Island Central Bank of East-Greenwich; hence they are rejected by the brokers. The latter bank has a disputed account of nearly forty thousand dollars with the Grocers' Bank, Boston, and has entered suit for recovery of this amount. The liabilities of the R. I. Central Bank a few weeks since were very limited, namely:

VERMONT.—An act authorizing banks to subscribe for, and hold stock in, a Bank of Mutual Redemption:

It is hereby enacted by the General Assembly of the State of Vermont, as follows:

Sec. 1. The several banks in this State, for the purpose of redeeming their bills at par, are hereby authorized and empowered to subscribe for and hold capital stock in a Bank of Mutual Redemption, in the city of Boston and Commonwealth of Massachusetts, to an amount not exceeding four per cent of the capital stock of each bank so subscribing.

SEC. 2. This act shall take effect from its passage. Approved, November 14, 1855.

Vermont Banks: Vermont Bank Commissioner's Report. — Mr. Daniel Roberts, the Vermont Bank Commissioner, has presented his report, which states that it was made up from "personal examinations in the months of July and August, 1855." It gives the whole number of banks as 42, with an aggregate capital of \$3,603,460; circulation, \$3,704,343; specie, \$201,566; deposit in city banks, \$1,063,466; loans, \$6,377,592. The increase of bank capital since last year is \$305,000; but the circulation is less than at any time since 1851, when there were ten less banks.

NEW-HAMPSHIRE. — The Somersworth Bank, at Great Falls, N. H., went into operation in December. It opens with a capital stock of \$100,000.

The Exeter Bank, at Exeter, N. H., incorporated at the last session of the New-Hampshire Legislature, went into operation also in December. John Sullivan is President, and James M. Lovering, Cashier.

NEW-JERSEY.—The Gloucester County Bank, at Woodbury, N. J., was chartered in April last, and commenced business in December, 1855, with a nominal capital of \$100,000, of which one half has been paid in. William R. Tatum, Esq., President; James W. Caldwell, Cashier.

CONNECTICUT.—Mr. T. P. Barnum having removed to this city, has resigned the Presidency of the Pequonnock Bank at Bridgeport, Ct. Hon. C. B. Hubbell is appointed his successor.

NORTH-CAROLINA.—The Legislature at its last session chartered the Bank of Wilmington, at Wilmington, N. C., of which John McRae has been elected President, and S. Jewett, Esq., Cashier. Capital, \$800,000.

Fayetteville.—The Bank of Clarendon was also chartered last winter. The Board have elected as President John D. Williams, Esq., and as Cashier, John W. Sandford; with a capital of \$400,000.

SOUTH-CAROLINA. — From the annual report of the President and Directors of the Bank of the State of South-Carolina, we learn that the net profits of the Bank

| for the fiscal year ending the 30th of September, amounted to \$273,050.92, which | ch |
|---|----|
| have been disposed of as follows:   |    |
| To the payment of the interest of the State Bonds, payable in                     |    |

VIRGINIA.—The charters of the Virginia banks are soon to expire, and the question of their re-charter or the adoption of the free banking system will come before the present Legislature. The holders of Virginia State Bonds, of course, desire to see these securities used as a basis for the circulation, while others are afraid of too sudden a change in this matter, lest the community be left without the means of facilitating business operations. There can be no doubt that the entire abandonment of the old system of chartered banks, all at once, for a system like that in vogue in New-York, would be a rash experiment. The change in this State was very gradual, the charters of the old banks expiring at such long intervals that the transition was easy and natural. In Virginia the banks depend largely on their circulation as a source of profit, and the sudden termination of the old system, before the new one should be fairly inaugurated, would create much trouble and inconvenience. The old banks have done so well for the State and for themselves, and have done so much for the establishment of a sound currency, that the Legislature should let "well enough" alone. They can not be too cautious in disturbing or altering the banking system of the State.

ILLINOIS.—The Southern Bank of Illinois, at Belleville, filed notice in February, 1855, that it would retire its circulation, which has been reduced to \$5556, against \$7000 Missouri six per cent bonds.

#### 

Currency —The Michigan Central, Illinois Central, and Chicago and Burlington Railroads have given notice that on and after the 8th instant, they will refuse all Georgia currency, or bills purporting to be issued by banks located in Georgia or Tennessee. This money should never have been received upon any terms by the railroads of the West. We believe the bills are good, and will be ultimately paid; but they form part of an illegitimate system of banking.

At a recent public meeting of merchants at Chicago, it was, on motion of Judge Skinner, seconded by Judge Dickey,

"Resolved unanimously, That the request of the merchants and business men of Chicago, that the banks and bankers of this city shall refuse to receive on deposit the issues of Georgia and Tennessee banks, after the 15th of January next, be complied with on the part of this institution."

The following Address to the Banks and Bankers, was agreed upon:

"To the Banks and Bankers of the City of Chicago and the State of Illinois:

"The undersigned, merchants and business men of this city, respectfully solicit your aid in suppressing and driving out of circulation all Georgia and Tennessee money from our city and State, believing it highly injurious to the business interests of this community, and unworthy of a longer credit.

credit.

"We hereby assure you that we heartily concur in the late movement made by several of our prominent railroad companies against the issues of Georgia and Tennessee banks, and would urge the banks and bankers of this city to refuse receiving it on deposit on and after the fifteenth day of January next."

To which address the bankers responded, and agreed to acquiesce in the views of the meeting.

We think our Illinois friends have done wisely in combining to restrict their circulation to the bills of their own banks, and thus endeavor to restore a sound currency to the people. The merchants of any one State owe it to their own capitalists and institutions to restrict their currency to the bills issued in the State, and sustained by the laws of their State, and to exclude all others—even of the States adjoining.

ALABAMA.—William Poe, Esq., President, and James N. Norvell, Esq., Cashier, of the Bank of Montgomery, Alabama, both fell victims to the yellow fever in October last, and are succeeded by George M. Thew, Esq., as President, and E. C. Hannon as Cashier.

WISCONSIN.—The following new banks have been established in Wisconsin:

| Name.              | Location.             | President.      | Cashier.         |

## Notes on the Money Market.

New-York, December 31, 1855.

Exchange on London, at Sixty Days' Sight, 81 a 81 Premium.

The money market for the year 1855 closes with a stringency in this city. The whole month has been marked with anxiety among operators, and distrust among capitalists; and the result has been that stocks have been dull and declining, and the rates for commercial paper have been exorbitant. One disturbing cause has been the threatened interruption of peaceful relations between the United States and Great Britain; and although the public sentiment of both countries is most decidedly against any breach of peace, still there is sensitiveness about capitalists that is very easily aroused. The commercial relations between the two countries are now become so intimate and so important, and there has been of late years such a good understanding between the two governments, that we cannot anticipate any serious change or dispute between them.

Although the U. S. may be considered as now more independent of Europe, financially, than at any former period, yet there is an extreme sensitiveness in the Wall-street market, as if we were closely involved with the belligerent parties in the existing war. On the other hand, Europe looks to the United States for a large supply of breadstuffs, and for those great staples which keep the millions of Great Britain in active employment.

With these large supplies of the necessaries of life, England cannot dispense; nor could their manufactories exist without a continued supply of cotton from this country. But every day confirms prior convictions that the manufactories of the United States are becoming more important every year, and that if necessary, we can dispense almost entirely with those products of European industry and skill for which we are, most extravagantly, paying over two hundred millions of dollars annually.

The English stock market is well sustained. Consols, at the latest dates, (December 14th,) wer quoted at 88½. This may be considered a favorable feature, after an expensive war of twenty months. It will be recollected by many that in the peaceful and highly prosperous year 1845, the minimum price of consols was 91½; in 1846, 98½; in 1847, 78½; in 1849, 79½; in 1849, 88½: when no remote idea was entertained of a war in Europe. These low prices have not been reached since the Russian war commenced, and even if it should continue twelve or eighteen months longer, the market values of consols will not recede to the lowest quotations of 1847 and '48; and if a slight decline should take place, it will, we think, be more owing to the increasing indebtedness to the United States for breadstuffs, than to the exhausting features of the war.

Whatever changes may occur in Lombard street during the next twelve months, and whatever may be the fresh loans ordered for the Allied Powers, it is now thought that the money market of Wall street is in a great measure independent of all such circumstances. The export trade of the country is now such as to secure to the farmers of the West, and to the planters of the South, most abundant profits for the year 1856. Formerly there was a large accruing indebtedness to England for railroad iron for the West. This drain of capital has now almost entirely ceased, and the import

trade of the country has been reduced to a more healthy condition—to one that can be compensated by the solid products of the States, and leaving the gold accumulations in our bank vaults.

One of the most important measures for the consideration of the present Congress, will be the reduction of duty on raw materials. This was urged upon Congress by the Treasury Department at the last session, but was, in part, opposed by those gentlemen whose constituents would be glad to have a change in the system. We allude more especially to the repeal or modification of the duty on foreign wool. Our own manufacturers in New-England, and the wool-growers of Vermont, Pennsylvania, Ohio, etc., desire this modification, because the present duty on the foreign article effectually prohibits its introduction for profitable use in combination with domestic wools.

The Secretary of the Treasury issued on the 1st inst. the annexed circular:

"TREASURY DEPARTMENT, Dec. 1.

"Notice is hereby given to holders of the stocks of the United States, that this department will purchase to the amount of \$1,500,000 of said stocks, at any time when the same may be offered, prior to the 1st day of June next, and will pay therefor the following prices, to wit:

"For stock of the loan of 1842, a premium of 10 per cent. For stock of the loans of 1847 and 1848, a premium of 16 per cent. For stock issued under the act of 1850, commonly called Texanindennity stock, a premium of 6 per cent. And for stock of the loan of 1846, redeemable on the 12th November, 1856, if received at the Trensury prior to the 1st day of January next, a premium of 2½ per cent; if received between the 1st January and 31st day of March next, a premium of 22 per cent; and if received after the 31st March, and prior to said 1st June next a premium of 12 per per cent; and if received after the 31st March, and prior to said 1st June next, a premium of 14 per

"Interest will also be allowed on said stocks at the rates specified in the certificates, from the 1st July last, if assigned with the principal of the certificates received prior to the 1st January next. After that date, the interest will be allowed in addition to the premium from 1st January to the date of their receipt. In both cases one day's interest will be allowed in addition for the money to reach the seller

"Certificates transmitted to this department under the present notice should be duly assigned to the United States, (with the current half-year's interest, if sont prior to the first of January next,) the United States, (with the current hall-year's interest, a soft problem of the party entitled to receive the purchase-money.

"Payment for these stocks will be made by drafts upon the Assistant-Treasurers at Boston, New-York, or Philadelphia, as the parties entitled to receive the money may direct.

"James Guthrie, Secretary of the Treasury."

The foreign readers of New-York journals might infer, from the current quotations of our Stock Board, that either a large number of railroad companies were insolvent, or unable to declare any dividend for a year or two hence; but such inference would be ill-founded. The dividends payable in January will certainly equal those of former years, and with increasing resources and more economical management on the part of these corporations, they deserve the attention of capitalists abroad and at home. In fact the stock market has rarely exhibited greater inducements than at present for permanent investment in State loans, railroad, city, and other securities.

State Loans are still quite depressed in the market, and a larger supply than can be fully met, although prices are very inviting. Those who purchase Missouri Six per Cent Bonds at their present market value, will not only realize about seven per cent on their investment, but will soon obtain an advance of 5 to 10 per cent. There is no reason why these loans should be any lower than Kentucky or Ohio. The whole indebtedness of Missouri is but trifling compared with the abundant wealth of the State, and this debt will not be increased to any alarming extent. The Legislature has, at its last session, made liberal donations to their railroads, and these in turn will contribute largely to the development of the vast resources of the State. Virginia and North-Carolina are also straining themselves to build up such systems of internal improvement as will enable them to compete with the adjoining States for freight and travel.

The Commissioners of the New-York State Canal Fund, by virtue of the act entitled, "An act to provide means to support the Government," passed April 12, 1655, and in accordance with Article Bevon of the Constitution, hereby give notice that Sealed Proposals would be received at the Canal Department until the 18th day of December, for a loan of four millions five hundred thousand dollars, for which transferable certificates of stock will be issued in the name of the people of the State of New-York, on the credit of the sinking fund, under Article Seven of the Constitution, bearing interest at the rate of five per cent per annum, payable quarterly on the first day of January, April, July, and October, in each year, and the principal reimbursable on the first day of January, one thousand eight hundred and seventy-four. The loan was readily taken, and the accepted bids ranged from 100.15 to 108.

The commercial intelligence from San Francisco is not important. There are no indications of a decline in the supply of gold from the interior. The failure of the banking firm of Sanders & Brenham occurred on the 5th November, with liabilities to depositors of about \$80,000. The business of the firm has been quite limited. The Alta California says:

"Besides the claims in suit, it was learned by the last Eastern mail, that a final judgment had been rendered against Mr. Sanders for \$49,000, a balance found due the government on the settlement of his accounts as Collector of this port. We learn at the Marshal's, that the execution on that judgment is expected by the next mail. There was quite a contest among the creditors to get

prior liens, and the counsel of Messrs. Dickson, De Wolf & Co., who are among the largest creditors suing, evinced extraordinary industry in managing to get out an attachment before 1 o'clock in the morning, when the day had commenced in contemplation of law."

At home, every department of trade is active and prosperous. Our ships are well freighted; our factories are closely employed; our planters in the South and West are getting rich; our railroads have more business offered, and at remunerating prices, than they can attend to. The receipts of the Michigan, Indiana, Illinois, and other railroads, are larger than ever. And, what is equally certain, the incomes of these roads cannot become less. The year 1855 shows large receipts over 1854, and the year 1856 must show equally flattering results. Surely, we are not too sanguine when we say, that roads whose stocks pay ten per cent, and yield a large surplus, must soon be at a premium in our market. States that never at any other period produced grain enough for domestic consumption, are now exporters, and profitably, too. Kentucky and Georgia, or instance, are now realizing large profits from their surplus grain crops.

We refer to the copious Stock Tables on a previous page, for quotations of leading shares. The market at present is depressed; but the month of January will release a large amount of capital in the shape of dividends on bank shares, railroad stocks, State and city bonds, etc. The following are the leading items of our city banks since November 8d:

|      |     | Loans.       |    | Specie.      |    | Circulatio  | R. | Deposits.           |    | Sub-Treas-  | Aggregate<br>Coin.  |

Breadstuffs maintained a rising tendency in the European markets in November, but at the close the advance was checked, and business in the Baltic ports quiet. Rumors were afloat that large cargoes were destroyed by the frost. Rye was considerably higher in Holland, Belgium, and on the Upper Rhine, while the advance was comparatively small in Hamburg, and the markets of the interior of Germany. Wheat was in brisk demand with limited supplies. The quotations in Holland, Belgium, and France were firm. The winter crop looks very promising. The extraordinary rise in sugar was followed by a sudden reaction, the yield of bect sugar being larger than anticipated. Coffee firm, but quiet. East-India rice had advanced, and there was but little Carolina in the Continental markets. Cotton and tobacco, in nearly all the Continental markets, have met with regular sales at full prices. Rosin generally in less demand. Spirits of turpentine quiet, but sustained. Whale oil and whalebone generally firm.

The accumulation of gold from Australia is such as to give strong assurances of permanency, and will fill the vacuum created by the Continental exports. The ship Kent had arrived at London with 182,000 ounces of gold, valued at £528,000, and the aggregate by these arrivals during the week were £1,170,000. So far then as money forms the sinews of war, England is amply supplied by her distant colonies in the Southern Hemisphere.

The commercial letters from Hamburg mention that the pressure for money is gradually subsiding, and that it is now attainable at 6½ to 6½ per cent. In Belgium the exchange has fallen in consequence of the quantity of silver sent to this country, where it has been purchased for transmission to the East.

The quotations of the present market cash values of the above, are sufficient to show that bank shares are in high estimation in this community. The fact that eight per cent dividends for the year may be relied upon, is sufficient to secure for these shares permanent investment. It has been decided by some of the State courts, and the principle is generally recognized, that administrators and trustees cannot legally invest in bank stock, for account of trust funds; and in this State there are trust companies chartered, which are, by Statute, receivers of such funds. If the decisions were otherwise, bank shares would maintain a still higher value than they do at present, as large portions of trust funds would seek investment in them, to realize eight or ten per cent per annum, instead of five per cent, as now allowed.

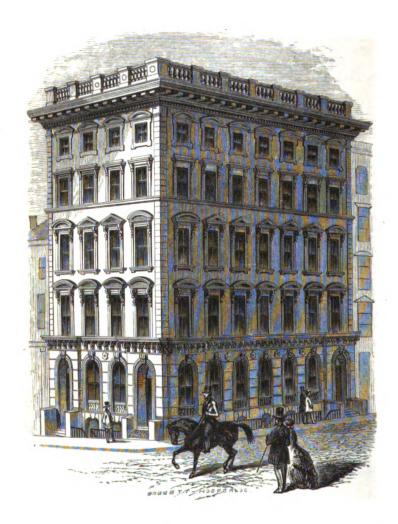

#### DEATHS.

AT BELLEVILLE, Illinois, October 27, aged fifty-seven years, TIMOTHY HINGKLEY, Esq., Cashler of the Southern Bank of Illinois.

AT COLUMBUS, Ohio, on Sunday morning, 9th December, of disease of the heart, Morgan La Fatette Neville, Esq., Cashier of the Exchange Bank of Columbus.

No. VIII.

#### FINANCES OF THE UNITED STATES.

I. Imports. II. Exports. III. Progress since the year 1800. IV. Movement of Bullion for eleven years. V. Tonnage for twelve years. VI. The Coinage. VII. Cotton. VIII. Iron. IX. Foreign Wool X. Bank-Note Paper. XI. The Sub-Treasury.

The Report of the Secretary of the Treasury upon the Finances of the United States for the fiscal year ending 30th June, 1855, has been published in full for public information. Formerly, this annual document was communicated to the Senate in writing, and months elapsed before its details were fully made known to the public. Now, by a judicious change in this respect, the Secretary is authorized to have the Report and accompanying documents printed beforehand, and thus the whole are laid before the public within a few days after the meeting of Congress.

I. The Treasury documents for the late fiscal year, are now embraced in a closely-printed octavo volume of 683 pages, embracing a mass of valuable statistical and other details, and exhibit, in full view, the great financial and commercial interests of the country at large. The contents of the volume are well arranged, furnishing information and suggestions of the first importance, and indicating great labor, industry, and talent, on the part of the head of the Treasury. We may truly say, indeed, that the fiscal affairs of the nation, and its great commercial topics, are removed from party machinery and

from party prejudices. The Tariff and its modifications, the Coinage, Treasury regulations, and other topics, coming legitimately under the special eye of the Secretary of the Treasury, are discussed with a liberal tone, and with regard to national interests, not to party measures.

II. The most agreeable features of the Report are: 1st. A reduction of custom-house revenues for the year, showing \$53,025,794, against \$64,224,190 for the previous year, and \$58,931,865 for the year 1852—'3. 2d. A material reduction of the public debt to the extent of no less than seven millions since July, 1854—the aggregate at the latter period being \$47,007,625, and on the 17th November last, \$39,739,700, in addition to small balances of Treasury notes and unfunded and funded debt outstanding for many years, which it is presumed will never be claimed. 3d. A more favorable result as to foreign imports and exports, namely:

EXPORTS AND IMPORTS OF THE UNITED STATES FOR NINE YEARS.

|                         |                      |                                 | EXPORTS.     |         |               |         | IMPORTS.      |

| 1855,                   | 246,708,558          |                                 | 28,448,298   |         | 275,156,846   | ••••    | 261,468,520   |
| • (                     | 4,820,422,620        | <b>\$</b> 1,                    | ,849,651,124 | •       | 6,170,074,744 | 1       | 6,982,901,454 |

III. These figures in themselves are very strong indications of the growing commercial importance of the country, and of its ability to meet and pay for, from its own soil and industrial forces, the importations of three hundred millions of foreign goods annually. The importations have doubled and the exports have trebled since the year 1840, and it may be well to exhibit the marked changes in these respects, within the half-century, namely:

|       |              |         |              | IMPORTS. |              |         |                     |
|-------|--------------|---------|--------------|----------|--------------|---------|---------------------|
| Year. | Domestic.    |         | Foreign.     |          | Total.       |         |                     |
| 1800, | \$81,840,000 |         | \$89,180,000 |          | \$70,971,000 |         | <b>\$91,252,000</b> |
| 1807, | 48,699,000   |         | 59,648,000   |          | 108,343,000  |         | 138,500,000         |
| 1814, | 6,782,000    |         | 145,000      | • • • •  | 6,927,000    |         | 12,965,000          |
| 1820, | 51,688,000   |         | 18,008,000   |          | 69,691,000   | • • • • | 74,450,000          |
| 1880, | 59,462,000   | • • • • | 14,857,000   | ••••     | 78,849,000   |         | 70,876,000          |
| 1840, | 118,595,000  |         | 18,190,000   |          | 182,055,000  |         | 107,141,000         |

The importations declined from \$189,000,000 in 1836, to \$107,000,000 in 1840; the former year being one of great expansion and accumulation of foreign indebtedness, following the unwise policy adopted and forced upon the country by General Jackson. The pet-bank system conceived and urged by him, was, we think, the ground and source of all the financial and commercial trouble, the debt and REPUDIATION of 1836-1840.

<sup>\*</sup> Totals from 1789 to 1855.

IV. The Secretary shows that the export of coin to Europe in discharge of our indebtedness for silks, finery, railroad iron, German toys, etc., was over fifty millions last year, being the largest amount ever exported in any one fiscal year; while in the fiscal year of 1847, (when the Bank of England was nearly reduced to bankruptcy,) the importations of coin were over twenty-two millions from Europe, viz.:

MOVEMENT OF COIN AND BULLION FOR ELEVEN YEARS.

| Years. | Imports.    |      | Exports.    | E | cc. of Import | s. E. | cc. of Exports. |
|--------|-------------|------|-------------|---|---------------|-------|-----------------|
| 1845,  | \$4,070,242 |      | \$8,606,495 |   |               |       | \$4,536,258     |

V. A more flattering feature, and one that strongly indicates the vast resources of the country, is the growing tonnage from year to year, namely: 1,280,000 tons in 1820; 1,191,000 tons in 1830; 2,180,000 tons in 1840; and 5,212,000 tons in 1855. The rapid changes in this respect since 1844 have been as follows:

| Year ending<br>June 30. | Registered<br>Tonnage, | 1 | Inrolled an<br>Licensed. | đ | Total<br>Tonnage. |
|-------------------------|------------------------|---|--------------------------|---|-------------------|
| 1844,                   | 1,068,765              |   | 1,211,330                |   | 2,280,095         |
| 1845,                   |                        |   | 1,321,830                |   | 2,417,002         |
| 1846,                   | 1,180,286              |   | 1,431,798                |   | 2,562,084         |
| 1847,                   | 1,241,313              |   | 1,597,788                |   | 2,839,046         |

|                         | 1,428,942              |   | 1,895,074                |   | 8,884,016         |
| 1850,                   | 1,585,711              |   | 1,949,748                |   | 8,585,454         |
| 1851,                   | 1,726,307              |   | 2,046,182                |   | 8,772,489         |
|                         | 1,899,448              |   | 2,238,992                |   | 4,138,440         |
| 1853,                   | 2,103,674              |   | 2,303,336                |   | 4,407,010         |
| 1854,                   | 2,283,819              |   | 2,469,088                |   | 4,802,902         |
| 1855,                   | 2,585,156              |   | 2,676,864                |   | 5,212,000         |

VI. The coinage and assay operations for the year 1854-'5, were as follows:

|                         | Gold.        |    | Silver.            | Total.           |    |
|-------------------------|--------------|----|--------------------|------------------|----|
| Mint Philadelphia,      | \$22,788,418 | 95 | <br>\$2,897,613 39 | <br>\$25,686,082 | 88 |
| " New-Orleans,          | 525,464      | 58 | <br>2,548,581 76   | <br>3,078,996    | 84 |
| " San Francisco,        | 16,155,745   | 93 | <br>127,757 57     | <br>16,283,508   | 50 |
| " Dahlonega,            | 199,128      | 26 | <br>               | <br>199,128      | 26 |
| " Charlotte,            | 250,138      | 06 | <br>               | <br>250,188      | 06 |
| Assay Office, New-York, | 24,855,002   | 88 | <br>219,211 45     | <br>24,574,214   | 33 |
| Total,                  | \$64,223,893 | 66 | \$5,798,114 16     | \$70,017,007     | 82 |

Of this aggregate of seventy millions, about eleven millions were re-deposited from the Assay Office, New-York, and of course the same gold was used in a double process.

<sup>\*</sup> Totals from 1789 to 1855.

Of this immense amount of coinage and bars, the sources were as follows:

| Foreign coin, gold,                     | \$205,919    | 12 |
|---|--------------|----|
| Foreign bullion, do.,                   | . 440,624    | 50 |
| United States coin, gold,               | . 8,817      | 50 |
| United States bullion, do.,             | 68,574,082   | 54 |
|   | \$64,223,S93 | 66 |
| Silver deposits, (including purchases,) | 5,421,777    | 81 |
| " parted from U. S. bullion,            | 871,836      | 85 |
| Total                                   | 870,017,007  | 82 |

The attention of Congress has been heretofore directed to the use-lessness of the branch mints at Dahlonega (Georgia) and Charlotte, (North-Carolina.) The total coinage at these two points for the year was less than \$450,000, and the incidental expenses of such coinage were from twenty to thirty thousand dollars. Thus, every dollar coined there costs the country over five per cent, when the same labor can be executed at Philadelphia or New-York at less than one per cent. Here is a reform needed, and Congress should look to it. The same sum expended for light-houses or repairs of lake harbors, would save the country hundreds of thousands annually in property, as well as many lives. A desirable change in the law would be to compel the government agents to send all the foreign coins received to the Mint for conversion into American coins. We should thus, in a few years, get rid of the defaced and depreciated fractions of the Spanish dollar now in use in this country.

VII. Of the importance of the great American staple, Cotton, the Secretary remarks that the American manufacture of cottons, for the year, is \$64,606,080. Cotton manufactures imported for consumption, \$18,385,327, exclusive of duties. The proportion of American manufactured cottons will be sixty-four millions to eighteen millions imported.

Within the last four years great improvements have been made in all the departments of the manufacture of cotton, and no doubt will continue to be made; and in a few years there will be manufactured in the United States a great proportion of the finer articles now imported. The statements of the manufacturers of cotton in the United States are made from the best information that could be obtained.

VIII. We have paid to England, Wales, and other portions of Europe, during the year, upwards of fourteen millions for IRON. What say you to this, Pennsylvania, Kentucky, and Tennessee! Would not fourteen millions of dollars paid for American iron and labor, be of some importance to your States?

Imports of iron for the year ending June 30, 1855—duties thirty per cent:

| Bar iron,           | . \$5,988,782 |
|---------------------|---------------|
| Rod iron,           | . 852,286     |
| Hoop iron,          | . 428,800     |
| Sheet iron,         | . 1,009,188   |
| Pig iron,           |               |
| Old and scrap iron, | 249,179       |
| Railroad iron,      | . 4,998,900   |
| Total one year,     | 214.950.941   |

Besides these fourteen millions, for one year, there were manufactures of steel and iron imported at a value of \$10,500,000.

IX. The reduction of the duty on foreign wool is again urged—a measure strongly advised by the American wool-grower, and woollen manufacturer. The following extract from a letter from a practical manufacturer, conveys a correct view:

"With the acknowledged industry and mechanical skill in the use of machinery by the American people, there are ample reasons for the belief that the manufacture of the great staple article of wool may be as successfully carried on by them as have been the manufactures of the other great staples of cotton and iron. The importance of wool for the supply of the wants of the people has been deemed of sufficient national interest to be kept always in view of the English legislators, by the actual presence of a large sack of wool placed conspicuously in the legislative hall, and by seating thereon their presiding officer. The production and manufacture of wool, under a free development of American skill and industry, might hereafter become also one of the most important staples of American enterprise, peculiarly adapted to the industrial pursuits of the population of the Western States of America. But as like causes produce like effects, it is not probable that the manufacture of broadcloth and other similar fabrics. will be re-commenced in the United States, until the staple articles of wool, dye-stuffs, etc., can be freely obtained on equal terms with the cost to the manufacturers abroad, as is the case in the manufacture of cotton."

X. The Secretary alludes to the bank-note system of the various States, as one that has the effect to exclude gold and silver from general circulation. We think there is a growing sentiment at this time in the country to restrict, rather than enlarge, bank issues; and that efforts will soon be made to do away with all bills under five dollars. This has been done in Maryland and Pennsylvania, with a good effect, and in periods of panic or stringency, the effect upon the banks will, obviously, be less than if the whole currency consisted (as it does in this State) of paper money. After the lapse of a few years, the restriction could be advantageously extended to ten-dollar bills. In France, we believe, the smallest denomination of bank-notes is one hundred francs; and by the Bank of England, five pounds. The consequence is, that gold and silver are more freely used in small transactions.

XI. The Secretary commends the new system of accounts for disbursing officers of the general government, whereby each officer is required to place his public funds in the Sub-Treasury or one of its branches. We can readily perceive that it is a better system for the public officer. He thus obtains a voucher from the public creditor for any and all sums paid to him on account of the government, and his own accountability as a public officer is better protected from loss. Many public officers have become "defaulters" to the Treasury in consequence of ignorance as to keeping accounts, and have sustained heavy losses for the want of proper vouchers. Of the present condition of the public debt, the Secretary has furnished the annexed details:

"TREASURY DEPARTMENT, "REGISTER'S OFFICE, January 1, 1856.

"Sir: I have the honor to submit herewith the following state-

ments, marked A and B.

"Statement A exhibits the original issue of the several loans, together with the debt of the corporate cities assumed by the United States; the amounts purchased before the 3d March, 1853, and since that time; the total redemption of each loan; and the amounts outstanding this day.

"Statement B shows the amount of the public debt paid off since the 3d March, 1853, to date; the interest which would have accrued provided payment had not been anticipated; and the saving to the

government under its prescribed modes of redemption.

"Of Treasury-notes, but \$950 have been presented for funding or redemption in the last eighteen months. Out of \$112,311.64 now outstanding, \$102,811.64 was issued prior to 1846, and it is presumed is most of it lost or destroyed.

"Of the old funded and unfunded debt—amounting to \$114,118.54 -principally made up of small items, varying from five cents to five dollars, it is reasonable to suppose very little of it will ever be called for, especially as nothing has been paid within the last two years.

"I have the honor to be, sir, very respectfully,
"Your obedient servant,

" F. BIGGER, Register.

"Hon. JAMES GUTHRIE, Secretary of the Treasury."

A .- Statement showing the amount of Slock originally issued of the Loans of 1842, 1843, 1846, 1847, 1848; Texas Indemnity, (issued and not issued,) and the debt of the corporate cities of the District of Columbia; the amount redeemed before the 4th of March, 1853; the amount redeemed since that time; the total amount redeemed, and the amount outstanding this day, Jan. 1, 1856.

### FINANCES OF THE STATES.

For the Years 1855-1856.

I. Massachusetts. II. Pennsylvania. III. Maryland. IV. Kentucky.

#### I. MASSACHUSETTS.

#### From the Message of Governor Gardner.

The financial condition of our State is such as to demand rigorous and minute economy in every branch of public expenditure. It is my firm conviction that grants of money have been made, and expenditures authorized by the Legislature for several years past, that the condition of our treasury, and the public necessity did not warrant. The time has fully come when all such grants should cease; and I consider it, after mature reflection, to be my duty, in every instance hereafter, while I occupy my present post, to deem such appropriations proper objects of an executive veto, and to withhold my approval from any bill by which they may be authorized.

For a number of years the annual deficit has been growing larger, and the excess of expenditure unprovided for increasing, until now the sum of \$825,000 is necessary, beyond our probable receipts, to enable us to liquidate our floating indebtedness at the close of the present year. The question as to what course shall be adopted to accomplish this end, you are called upon to determine. The State owns \$750,000 of stock in the Western Railroad, but in my judgment it would be highly impolitic, if practicable, to sell it at the present time. We

have a just claim against the general government, amounting to \$227,176.48, for services performed, and expenditures actually made, to repel invasion during the war of 1812. If this sum is reimbursed at the present session of Congress, as it should be, and as every other claim of a similiar nature already has been, it would absorb one quarter of this floating debt. An indefinite, and by present law, unsalable interest in the Back Bay Lands, is the only other property possessed by the State, the proceeds of which are not devoted to specific purposes. Under these circumstances, it only remains to fund this floating debt, or a portion of it, or to pay it by direct taxation.

The Auditor has furnished me with the following table of approximate expenditures and receipts for 1855, which are contrasted with those of 1854:

| Legislative and executive,   \$473,250   \$354,398   \$50:entific and educational,   19,969   20,686   10:erest on public debt,   108,517   100,652   Charitable and humane purposes,   330,656   236,252   Correctional and preventive do.   236,961   170,355   Military,   78,339   67,489   Public buildings not provided for by scrip,   130,640   130,640  | EXPENDITURES.   |   |                           |

#### II. PENNSYLVANIA.

#### From the Annual Message of Governor Pollock.

The report of the State Treasurer will exhibit to you, in detail, the operations of his department. The results are more satisfactory and encouraging than were anticipated.

The receipts of the Treasury for the fiscal year ending November 30th, 1855, including the balance in the Treasury on the 1st day of December, 1854, (\$1,240,928.72,) amounted to \$6,631,402.83. The total payments for the same period were \$5,385,705.52; leaving a balance in the Treasury on the 30th November, 1855, of \$1,245,697.31. No loans, temporary or otherwise, were negotiated during the past fiscal year, as they were not required by the wants of the Treasury.

The receipts, during the past year, from all sources, (excluding the balance in the Treasury on the first day of December, 1854,) were \$5,390,474.11. The ordinary expenditures for the same period, including the interest on the public debt, were \$4,139,512.28, showing an excess of receipts over ordinary expenditures of \$1,250,961.83.

The extraordinary payments for the year were \$1,246,193.24, as follows, namely: To the completion of the new Portage Railroad over the Allegheny Mountains, \$446,762.12; to the North Branch Canal, \$87,562.67; to the Columbia Railroad, to re-lay south track, \$133,100; to the payment of domestic creditors, \$1629.85; to redemption of loans, \$316,550.60; and to relief-notes cancelled, \$260,588.

The balance in the Treasury will be required for the payment of the interest on the State debt falling due in February next, and for unpaid appropriations. The interest on the funded debt of the Commonwealth which became due in February and August last, was promptly paid; and it is gratifying to state that the interest due in February next will be paid with equal promptness. The credit of the State may be regarded as firmly established, and with proper economy and a careful and honest management of her finances, an annual reduction of her debt, to a considerable extent may be confidently expected.

There is due by the Treasury to the Sinking Fund, the sum of \$335,011.39, to be applied to the redemption of the relief-notes now in circulation, and to the funded debt of the commonwealth. The greater part of the funded debt bears interest at the rate of five per cent per annum; the balance bears a still less rate of interest. But as the temporary loans, which by law are to be first paid out of the available means of the Treasury, bear interest at the rate of six per cent, it has been deemed advisable, as a matter of economy, to apply the surplus revenues to the payment of those loans. When these are liquidated, the amount due and properly applicable to the Sinking Fund will be paid, and its operation continued as directed by law.

Public Debt.—Notwithstanding the revenues for the last four or five years have largely exceeded the ordinary expenditures of the government, yet, in consequence of the large and insatiable demands upon the Treasury for the completion of the North Branch Canal, the Portage Railroad, and other kindred improvements, the public debt, instead of being reduced, has been increased. This increase, with the amount and condition of the debt at different periods, will be seen in

the following statements:

Statement of the Funded Debt of the Commonwealth on the 1st of December, 1851, as per report of the Auditor General.

#### FUNDED DEBT.

| Total debt, as above stated, December 1, 18  |                         |     | 41,698,595   | 74 |
| " December 1, 18                             | 55,                     | • • | 41,067,994   | 72 |
| Decrease during the fiscal year,             | • • • • • • • • •       |     | \$630,601    | 02 |

This statement exhibits the gratifying fact that, during the fiscal year ending November 30, 1855, the indebtedness of the Commonwealth has been reduced \$630,601.02. During the same period, large appropriations and payments were made for the completion of the new Portage Railroad, re-laying the track of Columbia Railroad, and for other purposes. These demands upon the Treasury were, without the aid of loans, promptly paid.

Internal Improvement.—Refusing to undertake any new schemes of internal improvement, limiting all appropriations to the actual demands of the occasion, practising strict economy in all departments of the government, and holding the receiving and disbursing agents of the

Commonwealth to a rigid accountability, will greatly reduce the expenditures, and, under ordinary circumstances, leave an annual surplus of the revenues to be applied to the redemption of the public debt.

Deferred Interest.—By the thirty-eighth section of the act of the 16th of April, 1845, entitled, "An act to provide for the ordinary expenses of government, the repair of the canals and railroads of the State, and other claims upon the Commonwealth," the Governor was authorized to cause certificates of State stock to be issued to all persons or bodies corporate holding certificates for the payment of interest on the funded debt of the State, which fell due on the 1st day of August, 1842, the 1st day of February and August, 1843, and the 1st days of February and August, 1844, in an amount equal to the amount of certificates so held, upon their delivering up said certificates to the Auditor General. In pursuance of the authority thus given, certificates of State stock to the amount of four millions one hundred and five thousand one hundred and fifty dollars and twenty cents, bearing interest at the rate of five per cent per annum, payable semi-annually, on the 1st days of February and August in each year, and redeemable on and after the 1st day of August, 1855, were issued. The minimum period fixed by law for the redemption of these certificates, expired on the 1st day of August last. No provision has been made for their renewal or redemption.

Although by the terms of the act authorizing these certificates of State stock, as also by the conditions of the certificates issued in pursuance thereof, the time of payment, after the expiration of the minimum period, is optional with the debtor, the Commonwealth; yet a due regard to the credit of the State requires that provisions should be made for their renewal or redemption. To redeem these certificates a loan would become necessary, and as a loan cannot be effected, in the present financial condition of the country, on terms more favorable to the State, than those on which these certificates were issued, I would recommend that authority be given to issue the bonds of the Commonwealth in renewal of said certificates bearing interest at the rate of five per cent per annum, payable semi-annually, and redeemable on or after the expiration of twenty years; and that the bonds be issued with coupons or certificates of interest attached, in sums equal in amount to the semi-annual interest thereon, payable on the first day of February and August in each and every year, at such place as may be designated. This change in the form and character of the certificates, it is believed, will be so advantageous to the holders, without increasing the liabilities of the Commonwealth, as to induce a willing and prompt exchange, at a premium, for the bonds proposed to be issued.

Revenue from Public Works.—The aggregate receipts of the Treasury from public works for the year ending November 30, 1854, were \$1,942,376.71. The aggregate expenditures, including ordinary and extraordinary payments, for the same period, amounted to \$1,838,791.18, showing an excess of receipts, over all expenditures, of \$103,585.53.

The extraordinary payments for the same year (excluding \$133,100 paid for relaying the south track of the Columbia railroad, and \$28,000 for rebuilding the Freeport aqueduct, were \$690,427.78. The ordinary expenditures were \$1,148,363.40.

| Aggregate receipts as above stated,<br>Ordinary expenditures. " | ٠. | ٠. | ٠. | ٠. | 1,942,376.71<br>1,148,363.40 |
|---|----|----|----|----|------------------------------|
| Net revenues for the fiscal year.                               |    |    |    |    | \$1,714,013.31               |

This balance exhibits a small increase in the net revenues, as compared with the net revenues of 1854; and notwithstanding the withdrawal of the transportation lines from the main line of the canal, the aggregate revenues for the last year have exceeded the revenues of 1854 by more than twenty-three thousand dollars. From the abundant crops of the past year, the improved condition of the monetary affairs of the country, and the general revival of business, a large increase in the revenues for the current year may be confidently expected.

Tax on Tonnage.—The sum of \$161,125.25 has been paid into the Treasury by the Pennsylvania Railroad Company and other railroad companies, as the tax on tonnage passing over their roads. This amount largely exceeds the sum paid by the same companies in 1854.

The Delaware division exhibits a satisfactory result. The total receipts were \$392,673.42; expenditures, \$60,097.86, showing a net revenue of \$332,575.56. If all our lines of improvement exhibited a similar balance-sheet, the people would have less cause of complaint and more confidence in the general operations of the system.

Columbia Railroad.—There has been a large increase in the business and tonnage of the Columbia railroad, and a corresponding increase in the receipts therefrom. The operations of this road, for the past year, have been highly satisfactory. The operations of that part of the main line from the Junction to Pittsburg, including the Portage railroad, do not present so favorable a result. The receipts have greatly diminished, and were not sufficient to meet the ordinary expenditures. The revenues from the main line do not equal the receipts of the previous years. The causes of this reduction are apparent, and some of them have been referred to and enumerated. It is but just to add, that the expenditures on this line have been much diminished by the avoidance of some of the inclined planes on the Portage railroad.

The Inclined Plane.—I regret to inform you that the railroad to avoid the inclined planes on the Allegheny mountain has not been completed, as was confidently anticipated. The delay in the completion of this work has occasioned much inconveniance to the business of the main line, and a loss to the revenues of the Commonwealth. The expenditures have largely exceeded the original estimates for its construction; and although the sum of \$277,730 was appropriated at the last session of the Legislature for the completion of this work—a sum covering the estimate of the engineer—yet after the expenditure of the whole amount thus appropriated, the road is unfinished; and to complete it, and pay the debts contracted, the further sum of

\$177,573.66, as now estimated by the engineer, will be required. Either the estimates have been very carelessly made, or large sums of money uselessly and extravagantly expended in the prosecution of this improvement. As aiding the business of the main line, reducing still further its expenditures and relieving the Treasury from these constant demands, the announcement of its early completion will be hailed with pleasure by every citizen.

North Branch Canal.—Although the completion of the North Branch Canal, before the close of navigation, was certainly expected, yet this expectation has not been realized. The efforts of the present Superintendent, Mr. Maffit, during the past year, to complete and put in successful operation this canal, deserve the highest commendation. Every thing that skill, energy, and industry could accomplish, has been done. The labor to be performed was great, and rendered more difficult and perplexing by the imperfect and fraudulent construction of the old work and some portion of the new. The large quantity of rocks, trees, stumps, and roots placed in the bottom of the canal, and the defective material used in the embankments, suffered the water to escape almost as rapidly as admitted, and rendered a reconstruction of the work, in many places, indispensably necessary. Its successful completion, it is hoped, will soon be announced.

It will appear by the report of the Committee of Ways and Means, made to the House of Representatives in 1849, that the entire amount necessary to complete and put in operation the unfinished portions of this canal, was estimated at the sum of \$1,106,037. The amount actually expended on the work since that period, as appears from the reports of the Superintendent, Engineer, and Canal Commissioners, is \$1,857,377.52, being an excess of expenditures over the original estimates of \$751,340.52; and the canal not yet in operation. With such facts before us—such evidence of mismanagement and reckless expenditure as the history of this canal shows, it is not matter of surprise that the Commonwealth and people are burdened with debt and taxation.

#### III. MARYLAND.

#### From the Annual Message of Governor Ligon.

By the report of the Comptroller made to me by that officer, showing the state of the Treasury Department at the end of the fiscal year 1854, it appears that the aggregate receipts into the Treasury for that year ending 30th of September, amounted to \$1,208,347.39, which with the sum of \$345,357.80, the balance in the Treasury at the close of the preceding year 1853, made the total sum in the Treasury from all sources, during the fiscal year 1854, \$1,553,705.19. The public expenditures for the same period were \$1,175,581.21, leaving a balance in the Treasury on the 30th September, 1854, of \$378,123.98, subject to the payment of subsisting demands, amounting in the aggregate to \$268,177.87; leaving in the Treasury at the termination of the year, applicable to future demands a net balance of \$109,946.11.

On the 30th September, 1853, there remained in the Treasury to

the credit of the Free School Fund a balance of \$30,802.66, and at the close of the fiscal year 1854, there had been received from all sources of revenue applicable to that fund the sum of \$75,235.18. The expenditures on that account for the same period were \$64,610.18, leaving at the close of the year, a balance on hand to the credit of that fund, of \$41,427.76. Among the sums received on account of said fund, it appears from the statement of the Comptroller, was the sum of \$9300 received of the Farmers' Bank of Maryland, from the reduction, which took place under the act of 1854, chapter 78, of two fifths of so much of the stock of the said Bank, as stood to the credit of the Treasurer of the Western Shore, for the use of the said fund.

The Legislature made no provision for the investment of these funds, and they have been invested by the Treasurer in six per cent stock of the State. This investment was made with the sanction of the Comptroller, who suggests that some legislative provision should be made by you, ratifying and confirming the same. I respectfully recommend the suggestion of that officer to your favorable notice.

At the close of the fiscal year 1853, there remained in the Treasury, to the credit of the sinking fund, the sum of \$1117.77. During the year ended 30th September, 1854, there was received into the Treasury to be accredited to that fund, the sum of \$284,473.58, which together with the balance on hand at the end of the year 1853, as above stated, show an aggregate sum of \$285,591.35, which entire sum was disbursed, during the fiscal year 1854, in investments for the use of that fund, so that at the close of the year, there was no balance whatever standing to the credit of that fund.

The stock of the State belonging to this fund at the termination of the fiscal year 1853, amounted to \$2,870,704.71, and there was purchased therefor during that of 1854, additional stock to the amount of \$287,931.82, so that the sum total of State stock held by the sinking fund, at the end of the fiscal year 1854, was \$3,158,637.53.

The report of the Comptroller for the fiscal year just ended, will furnish you in detail, the operations of the Treasury Department for that period; I shall trouble you with but an outline only, of the same, for the purpose of laying a proper basis, for the adoption of some of the measures which I have considered it my duty to recommend to your consideration.

There was received into the Treasury, in the fiscal year ending the 30th September, 1855, from all sources the sum of \$1,200,762.58, to which is to be added the balance in the Treasury at the end of the preceding year, amounting to the sum of \$378,123.95, making the aggregate receipts for the year 1855, \$1,578,886.58.

The disbursements of the Treasury for the year ending 30th September, 1855, were in the aggregate \$985,964.53, leaving remaining in the Treasury at the end of the year, applicable to future demands, the sum of \$592,922.03.

There was received into the Treasury during the fiscal year 1855, on account of the sinking fund the sum of \$263,025.87, all of which said sum was during the same period disbursed in investments for the use of the same. The amount of stock standing to the credit of

the sinking fund on the 30th September, 1854, was \$3,158,637.53, and the amount added to the same, during the year 1855, was \$268,112.42, so that the aggregate value of the stock standing to the credit of that fund at the close of the year 1855 is \$3,426,749.95.

At the close of the fiscal year, 1855, the aggregate of the public debt of the State, was \$15,132,909. Of this amount the Baltimore and Ohio Railroad Company pays the interest upon \$3,200,000, the Susquehanna and Tide-Water Canals furnish the means for paying the interest of \$1,000,000, and the Northern Central Railway Company hereafter furnish money to pay interest upon \$1,500,000, leaving to be derived from other sources interest on the sum of \$9,432,909.

The sinking fund, as herein before shown, holds of this debt \$3,426,749.95, of which amount, so held by the sinking fund, there was purchased, during the last two years, \$556,045.24, and there has been called in for redemption, and paid out of the surplusses in the Treasury, for those two years the amount of \$211,433.31, so that during the last two years there has been absorbed of the public debt absolutely, by cancellation and redemption, the sum of \$211,433.31, and virtually by purchase, for the sinking fund, the further sum of \$556,045.24, making an absorption, actual and virtual of \$767,478.55,

within that period.

No citizen of Maryland can contemplate this exhibit of the finances of the State, without experiencing the sincerest gratification. What a contrast is presented, between its condition now and the humiliating position it occupied but a few years ago? Then, we stood trembling upon the very verge of State insolvency, repudiation, and dishonor; now, owing to the public virtue and indomitable energy by which the integrity of the State has been vindicated, and our plighted faith honorably maintained, we not only behold the dawn of our deliverance, but the broad open day is clearly in our view, revealing to us a prosperous future and animating laudably the pride of every citizen of the State. Let but the same spirit that has animated our people be continued, accompanied by that spirit of retrenchment and economy that should ever shape and direct public measures, and but a few more years will clapse before their toils and sacrifices for the preservation of the public credit will be abundantly rewarded by the rich fruition of their highest hopes. Wave after wave of public prosperity is bearing us farther and farther from the receding shores of insolvency and dishonor; the day not far distant when the demands of the public creditors shall all have been cancelled to the last farthing, when the fetters fastened upon us by a vast indebtedness shall be broken, and the State shall stand once more erect in its own unborrowed strength, relieved finally of the galling thraldom of public debt.

The Treasury, for many years, has not exhibited such a condition of soundness, justifying such cheering hopes with regard to the future. Our public debt is now a manageable affair, completely within our grasp and under our control; nothing short of some great public

calamity can occasion us further embarrassment.

It gives me a high degree of gratification to state that the various

public works in which the interest of the State is so largely concerned, have participated to a very considerable extent in the general prosperity of the country. The operations of the principal of them, to wit, the Baltimore and Ohio Railroad Company, and the Northern Central Railway Company have been characterized by a degree of success which encourages the most cheering anticipations.

# Extracts from the Annual Report of the Comptroller of the Treasury Department of Maryland.

### IV. KENTUCKY.

### From the Annual Message of Governor ----.

It will seen, as stated by my predecessor, in his last message, that the balance in the treasury on the 10th of October, 1853, was \$187,632.23. The receipts into the treasury from the 11th of October, 1853, to the 10th of October, 1854, amounted to \$697,469.55, making an aggregate of \$885,101.78. This includes not only the revenue for the ordinary expenses of the government, but the tax of five cents on the \$100 for the sinking fund, and two cents for common school purposes. The amount of expenditures for the same period was \$773,381.47, leaving a balance in the treasury on the 10th of October, 1854, of \$111,720.31.

During this year, and out of these receipts, there was transferred to the sinking fund, for the five cents revenue, taxes on forfeited lands, and tax on insurance offices, \$179,885.48; there was also transferred for surplus revenue, for the year ending 10th of October, 1853, \$60,000, making, 10th October, 1854, \$239,845.48. During this year there was also transferred, in like manner, to the school fund for the two

cents revenue, dividends on bank stock, tax on bank stock, and interest on school bonds, the sum of \$89,513.76.

The receipts into the treasury from the 11th of October, 1854, to the 10th of October, 1855, amounted to \$883,707.49. To which the balance in the treasury on the 10th day of October, 1854, of \$111,720.31, added, will make the sum of \$995,427.80. The expenditures, including the transfers to the sinking and school funds, amounted to \$739,696.25, leaving in the treasury on the 10th of October, 1855, the sum of \$255,731.55. Of this sum there belonged to the sinking fund the sum of \$104,687.54; to the school fund \$56,839.90; to ordinary revenue \$94,204.11, making the total amount, as before stated, \$255,731.55.

During the year there was transferred to the sinking fund for the five cents revenue, for taxes on forfeited lands, and on insurance offices, the sum of \$194,846.65; and to the school fund for the two cents revenue, dividends on bank stock, tax on bank stock, interest on school bonds, etc., \$226,363.11. These items constitute a part of the aggregate expenditures reported for this year. Since the 10th of October, 1855, the above sum of \$104,687.54 has been transferred to the sinking fund. Also, the surplus revenue at the close of the fiscal year, amounting to \$76,518.55, leaving in the treasury on the 10th of October, 1855, as ordinary revenue, \$17,685.56. The law requires a surplus to be left of ten thousand dollars, and the residue of the above sum was for outstanding balances against the treasury.

The receipts for the year ending the 10th day of October, 1855, are estimated by the Auditor as follows, namely: The revenue of 1855 amounts to \$717,073.27. Charges, etc., will be about \$50,000. Amount paid previous to the 10th of October, 1855, the sum of \$5746.79, leaving in the treasury the sum of \$661,326.48. Of this sum, \$194,507.78 belongs to the sinking fund, and \$77,803.12 belongs to the school fund—making \$272,310.90 to be deducted—leaving for ordinary revenue the sum of \$389,015.58. Estimated receipts of ordinary revenue from other sources, \$139,950. Balance in the treasury on the 10th of October, 1855, \$17,685.56, making the aggregate sum of \$546,651.14.

The estimated expenditures for 1856, \$381,050; estimated debts to be paid, \$160,000, making an aggregate of 541,050; which would leave a balance in the treasury, on the 10th day of October, 1856, of 5601.14.

This view of our finances, while showing a sufficient amount for all the necessary purposes of an economical administration of the government, at the same time admonishes us against any extraordinary or lavish expenditure of the public money. While I would avoid parsimony, I cannot too strongly recommend the observance of a wise and salutary economy in all our public expenditures. A portion of the public revenue has been dedicated by the constitution to the payment of the interest upon the public debt and to its gradual extinction, and while it may be increased, cannot be diminished. It is the settled and fixed policy of our State to extinguish our public debt as rapidly as our resources will allow, and it is a source of gratification and pride, that the means already dedicated to that end are ample to

pay the interest as it accrues, and if wisely and prudently managed, to extinguish the principal at its maturity.

From the 31st of December, 1853, to the 4th of September, 1855, when the term of my predecessor expired, there was paid of the principal of the State debt the sum of \$162,009. Since I have been in office, \$31,000, up to the 30th of November, 1855, have been paid, leaving the entire aggregate of our State debt on that day \$5,991,576.73. Of this sum \$600,000 are held by the Southern Bank of Kentucky, the interest upon which it is bound to pay, and for which the State holds that amount of stock, and \$1,369,664.73 are held by the board of education, the interest upon which only may be considered a perpetual charge upon the sinking fund. The actual debt, the principal of which has to be provided for, is, therefore, \$4,021,912. Since the 30th of November, 1855, up to which period the above statement is made, there has been redeemed of the public debt the sum of \$14,000. The semi-annual interest due the 1st day of January, 1856, has been forwarded to New-York, and will be promptly paid. For details with regard to the public debt, when the bonds were issued, under what law, and when maturing, and for a detailed statement of the resources of the sinking fund, I refer you to the report of the commissioners, which will be laid before you.

The total receipts of the sinking fund from 1st of January, 1854,

to the 10th of October of the same year, including the balance then on hand, were \$391,103.80. The expenditures during the same period were \$242,695.05, leaving a balance in the Treasury on the 10th of October, 1854, of \$148,408.75. The receipts from the 10th of October, 1854, to the 10th of October, 1855, including the above balance, were \$662,494.50. The expenditures during the same period were \$519,015.87, leaving a balance in the Treasury on the 19th of October, 1855, of \$143,478.63. From 11th of October, 1855, to 30th November, 1855, there was transferred to the sinking fund, of the surplus revenue, \$76,518.55, and for collection of revenue, transferred, the sum of \$104,687.54, the three sums making an aggregate amount of \$324,684.72. The expenditures from the 11th October, 1855, to 30th of November, \$7,868.50, leaving a balance in the sinking fund, on the 30th of November, 1855, of \$316,816.22. This balance is after the payment of the interest due 1st of January, 1856. This entire surplus may be safely used in purchasing the bonds of the State, and I have accordingly anxiously sought to make such investment. The holders of our bonds, however, seem reluctant to bring them into market, and comparatively a small amount only has been purchased. This fund, by law, remained on deposit in our banks without yielding any thing to the sinking fund. The commissioners concurred with me that as long as it remained uncalled for in bank, it ought to command some reasonable interest. Accordingly an arrangement was made with the Bank of Kentucky, that it should keep the sum of \$100,000 in the city of New-York, without charge for its transfer, for the purpose of purchasing bonds of the State, upon which an interest of three per cent per annum should be paid, and for the sum of \$210,000 an interest of four cent should be paid, the whole deposit of \$310,000, or any part of it, to be subject to call by the commissioners, whenever wanted for investment or any other purpose. It is desirable that this fund should be used as speedily as practicable in redeeming our debt, and no pains will be spared to effect that object.

### RECENT BANK ARCHITECTURE IN NEW-YORK.

- I. Banking House of Messrs. Duncan, Sherman & Co. II. The Bank of the State of New-York. III. The Mechanics' Bank. IV. The Bank for Savings.
  - I. BANKING-HOUSE OF MESSES. DUNCAN, SHERMAN & CO.

Corner of Nassau and Pine streets.

THE building has a front of forty-nine feet three inches on Nassau street, and eighty-eight feet on Pine street; and it has a sub-cellar, basement, and five stories. The stone used for the fronts is a hard brown stone of a light and uniform color, and very fine grain, of the Belleville quarries, New-Jersey. The cellar is seven feet six inches, basement nine feet, first story fifteen feet six inches, second story fifteen feet four inches, third story thirteen feet six inches, fourth story twelve feet, and the fifth fifteen feet high in the clear.

The style of architecture is the Italian. The basement is plain, with segment arches with plain keystones over windows, and has a base moulding on the top, to form a base for the first story. The first story is rusticated with moulded window and door arches, with semi-circular door and window-heads, and ornamented key-The window-sills are plain, but supported by balusters out in the panels underneath the sills. On each corner of the building is a projection in the first story, the ashlars of which, inclosing the three entrance-doors and the window on Pine street next to the corner of Nassau, are sunk panel and cut in diamond pattern. The first story has a bold projecting cornice, with handsome brackets supporting it, and panels between the brackets. The crown moulding forms the sill of second-story windows. The second, third, and fourthstory windows have rich trimmings, moulded architraves, and panelled arches with ornamented trusses supporting the cornice, and a frieze under the cornice. The second-story windows have segment pediments, and the four corner windows are ornamented with scroll work, leaves, and flowers. The third story-windows have moulded sills with a bracket under each end, and have triangular pediments, with the exception of the four corner windows, which have segment pediments. There is a string-course forming the sills of fourth-story win-

dows, which have no pediments, but a plain blocking-course over the cornice. The fifth-story windows are trimmed with moulded architraves, returning under the windows, forming sills, and broken on the corners. The windows have no friezes, but segment pediments, the lower member of which runs all around the fronts, forming a frieze under the top cornice. The top cornice has dentil blocks and plain modillions, and is entirely of stone, with the exception of the crown moulding forming the gutter, which is cast-iron. The parapet above the cornice has panelled piers coated with iron, and iron balusters between them. The building has quoins on the corners. All the ashlar facings are very strong, eighteen inches in the basement and varying from sixteen to ten inches in thickness.

The ceilings are supported by cast-iron columns. The girders and beams are American rolled iron of Cooper & Hewitt's. The floors are arched with brick between the beams. The ceiling of sub-cellar is groin arched between brick piers. The roof is covered with corru-

gated galvanized sheet-iron.

The bank vaults are of granite, very strong, and covered with thick granite plate. The iron work of the safes is furnished by Cornell. The window frames, throughout the building, are of cast-iron, with iron shutters; the sashes are mahogany, and glazed with best polished British plate glass. The doors and door-frames, throughout, are of iron, and all the partitions built in brick, and no pains or cost have been spared to render the whole building as strong, durable, and fire-proof as possible. All the inside window and door trimmings are run in Keen's cement.

The basement and all the stories above the first story are designed for offices. The entrance to the offices on the second, third, fourth, and fifth stories is on the southern end of the building on Nassau street, where white marble stairs, over eight feet wide, lead up to the second story. Handsome semi-circular iron stairs, five feet six inches wide, run all the way up from second story. The first story is designed for the banking-room, the entrance to which is in Nassau street, on the corner of Pine. The banking-room is about thirty-five by sixty feet, decorated with scagliola columns, with Ionic caps, columns resting on pedestals, rich moulded architraves, and panelled ceilings and walls. In Pine street is another entrance to the private office, in the rear of the banking-room.

Six different flights of iron stairs lead from the side-walk to the

basement.

The vaults under the side-walk extend along the whole fronts of the building on Pine and Nassau streets.

The side-walks are flagged with granite plates of sufficient thickness to form the curb.

Messrs. Mahoney & McAuliffe are the stone-cutters; Mr. Bogart, the mason; Messrs. Cooper & Hewitt furnished the rolled iron; and Mr. Cornell put up the same and the roof; the castings are furnished by the Builders' Iron Foundry, Providence, R. I. The whole will cost about \$165,000, exclusive of the ground, and will be finished by the first of May, 1856.

### II. THE BANK OF THE STATE OF NEW-YORK.

William street, corner of Exchange Place.

The new building for this Bank, on the corner of William street and Exchange Place, has the advantage of being built on a spacious lot, forty-one by eighty-eight feet, instead of one of the long narrow slices of land, twenty-five by one hundred feet, into which New-York is divided. It is a massive-looking structure of pure white marble, on the model of a Roman palazzo. It is five stories in height, the distance from the level of the street to the top of the cornice being seventy-five feet. The first floor, a few feet above the level of the street, is occupied with the banking-room, the other stories being divided into offices. The first story consists of a series of arches, the front being divided into three large and two small ones. The centre arch is the entrance to the Bank, that on the right leading to the offices. The quoin stones of each bear a sculptured head, similar to those on the Tontine, although not so well executed. The one over the entrance to the Bank is a head of Mercury, the god of thieves and money-dealers, before (as the facetious office-boys are fond of observing) the two professions were separated. Each of the remaining stories contains three richly-trimmed windows in front and five on the side. The whole is surmounted by a heavy marble cornice.

The building is fire-proof; the floors are constructed of iron girders with brick arches between. The banking-room is twenty-nine by sixty-eight feet, with directors' rooms, etc., on the same floor. The walls in the banking-room are to be finished in imitation of marble. The ceiling will be deeply panelled and painted in blue and gold. The offices above are approached by a noble flight of white marble store.

The architect has arranged the windows in a very artistic manner, avoiding the mean appearance which some of the large buildings in the city present of innumerable small windows, separated by narrow piers, reminding one of the old ballad:

"Proud Hardwich Hall, More windows than wall."

The architect is Mr. James Renwick, Jr.

### III. THE MECHANICS' BANK.

Wall street, New-York.

The Mechanics' Bank, on lots Nos. 33 and 35 Wall street, New-York, has a front of forty-two feet three inches, and in plan it is composed of a front building forty-six feet deep and six stories high, which will be let for offices. Both this and the banking building are throughout fire-proof, Cooper's iron beams being used to support the floors.

The banking building is on the rear of lot, and has a basement which includes the cellar furnaces, wash-room, and a refectory.

The banking-room, which is on the principal story, is entirely open

and free; is lighted and ventilated by windows at each end, and a lantern of iron at top.

The cashier's room and safe are built on a gore of the lot, and are both commodious. The directors' room is immediately above the cashier's room, and is also lighted by a lantern. There is also on this story a safe.

The front on Wall street is built of a yellow sandstone of very fine quality, from Dorchester, New-Brunswick. It is in the Italian style and quite unique, and in it at once is seen a propriety of design to the material and uses. The following page gives a correct plan of the main floor of the building. The banking-room is thirty-three feet nine inches in width, by fifty-seven feet six inches in depth; to which are attached a cashier's room and a very capacious safe. The front offices are well adapted for insurance companies, or banking rooms. These may be used *en suite*, or separately, at the convenience of the occupants.

The wood-cut illustrations of this building, and of the other new banking-houses, were executed by Mr. Bobbitt, Wood-Engraver, No.

117 Nassau street.

Messrs. Richard Upjohn & Co., architects.

### IV. THE BANK FOR SAVINGS.

### Bleecker street, opposite Crosby street.

The building is sixty-one feet front by ninety-five feet deep, one story high, with basement. The building is built with white marble, and is in the Roman (Palladio) style of architecture.

The basement is divided into compartments for the porter; also coal-cellars, furnace-rooms, private vaults, etc. The basement is ten feet in height.

The first or main floor is divided into two principal vestibule en-

trances sixteen feet by twenty feet and twenty-three feet high.

Directors' room sixteen feet by twenty-seven feet, and twenty-three feet high. The accountants' room fourteen feet by twenty-four feet, and fourteen feet high; also a perfectly fire-proof and burglar-proof safe, ten feet by twelve, and ten feet high.

The main banking room is fifty-four feet by fifty-four feet, and forty-two-feet high, lighted by side and rear windows; also a large dome.

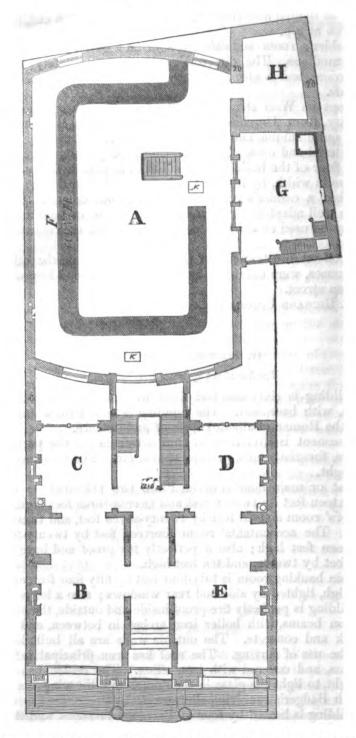

The building is perfectly fire-proof inside and outside, the main floor having iron beams, with boiler iron arches in between, and filled in with brick and concrete. The outside walls are all built hollow to prevent the use of furring. The roof has iron principal rafters and cross-beams, and covered with iron tiling. The centre has an iron lantern light, to light the glass in the dome. All the windows are protected with Badger's revolving shutters.

The building is heated by four of Barrows' furnaces, and the build-

ing thoroughly ventilated.

The whole of the interior of the building is finished in fresco by Molini. T. Thomas & Son, architects.

### VALUE OF GROUND IN LONDON AND NEW-YORK.

THE Builder, a London periodical, recently published the following with reference to the value of ground in the central business portions of London. We copy it, and for the purpose of presenting a comparison as to the relative value of ground of New-York and London, and some statements respecting the land in the business portion of the city. The figures presented will astonish those who have never

inquired into the subject:

"Some land in Finch lane, opposite the Australasian Bank, recently let on a building lease, by the Merchant Tailors' Company, produced about £15 a foot as ground-rent—the depth being about seventy feet. The new buildings on the south side of Cornhill, recently rented by the Messrs. Savory and the County Hire-Office, are subject to a groundrent of £1200 per annum. The frontage is about fifty-four feet, and the depth eighty feet; and calculating as in former cases, (at the rate of thirty years' purchase,) the cost per acre amounts to £470,000. Again, the block of buildings called the Royal Exchange Buildings, occupying an area of from 4000 to 5000 feet, produced a gross rental of £10,000 a year. Travelling westward to New-Cannon street, a piece of land opposite the triangular plot adjoining St. Paul's containing about 4500 superficial feet, has been let at a ground-rent of £1550 a year, which, at 30 years' purchase, produces about £460,000 an acre. To cap them all, however, we must go back to the plot of ground at the north-east corner of Thread-needle street and Finch Lane, belonging to Mr. Alderman Moon, the present Lord Mayor, which, report says, has been recently let at a ground rent of £1000 per annum. The superficial area of this place is about 1600 feet, and calculating the ground-rent at thirty years' purchase, we find its value is at the rate of £840,000 per acre. Much has been written about the value of the triangular plot of land between New-Cannon street and St. Paul's. The area of the plot is 6270 feet, and we understand a positive offer has been made to take it at a ground-rent of £2000 a year, which would produce, at thirty years' purchase, the sum named, (£60,000,) being at the rate of £420,000 an acre. We need scarcely give any additional examples to prove the enormous value to which land in the city of London has arrived."

The above figures are indeed large, but we shall see whether they may not be equalled and perhaps exceeded by New-York valuations.

The lot corner of William street and Exchange Place, 80 feet deep, and on an average 34 feet 4½ inches wide, containing 2760 superficial feet, was sold to the Bank of the State of New-York for \$80,000, and \$100,000 have since been offered for it. At the latter valuation, per acre, it amounts to \$1,578,261, or about £326,087. The lot on the lower corner of Broadway and Wall street, 30 feet by 40, containing 1200 square feet, is held and may be sold for \$100,000. This is at the rate of \$3,630,000 an acre, or about £750,000. The lot corner of

Nassau and Wall streets, on which the Express (newspaper) buildings stand, is 25 feet by 90, and is held at \$125,000, or \$2,420,000, equal to £500,000, per acre. The lot on Nassau street adjoining the lot on which Messrs. Duncan, Sherman & Co. have commenced their new banking house, is considered abundantly worth \$120,000, but it is held at \$150,000. At the former figure, it being but 50 feet by 80, and containing 4000 square feet, it is held at the rate of \$1,306,800 an acre. For the lot corner of Cedar and Nassau streets, now covered by the Law Buildings, 25 feet by 80, \$90,000 we understand were offered recently, which is at the rate of \$1,960,000 per acre. The lot and building adjoining the Custom House, lately occupied by the Bank of the State, and Bank of Commerce, was sold to the U.S. government for \$530,000. Estimating the value of the building at \$30,000, we have \$500,000 for the value of the lot, the area of which is 9000 square feet. The rate per acre is \$2,420,000, or £500,000. At the recent change in the organization of the Mechanics' Bank, the building and lot occupied by the institution were appraised at \$230,000. The building is to be torn down, so it was not counted in the appraisement. The lot is an irregular piece of ground of an area of about 5000 square feet, and its valuation per acre was more than two millions of dollars. Lot No. 4 Wall street, 22 by 50, was sold a year ago for \$50,000, which is at the rate of nearly two millions per acre. Messrs. Duncan, Sherman & Co. paid for their lot on the corner of Nassau and Pine streets, which is 50 feet by 80, \$147,000, which is at the rate of more than sixteen hundred thousand dollars per acre.

With respect to leases, we have but two instances to report. The lot on the north-east corner of Fulton street and Broadway, which contains only 1600 square feet, is subject to a yearly rental of \$16,000. Estimating on the same principle as in London, (at thirty years' purchase,) we have for the value of this lot the enormous sum of \$480,000, which is at the rate of more than twelve millions of dollars per acre, or about two and a half million pounds sterling! We cannot give the exact figures as to the amount of the yearly rental of the lot on the south-west corner of Broadway and Chambers street, covered by a building owned now by the Shoe & Leather Dealers' Bank, but are sure of this much, that it is considerably larger per acre than the rate at which the Lord Mayor's lot, mentioned in the above extract, was let. It is proper to add, that estimating the value at the London rate, it cannot be correctly applied to this city; about a fifteen years' purchase would be more in accordance with circumstances. would make the value of the piece first mentioned higher than Alderman Moon's lot.

An Ancient Bank-Note.—A gentleman, residing at Edgartown, in looking over some papers left by a deceased mother, came across a ten-dollar bill on the Warren Bank, of Warren, R. I., dated August 4, 1804. The bill was left in the family over forty years ago by a man boarding with them, who, it is supposed, went to sea and never returned. Since it has been found, it has been mailed to Mr. Carr, the present cashier of the Bank, who pronounced it a genuine bill, and returned one of the same amount of a recent date.

### REPORT ON THE SUB-TREASURY.

WASHINGTON CITY, D. C., November 21, 1855.

Sin: In compliance with the instructions given in your letter of May 26, 1854, and renewed under date of March—, 1855, I have, within the last eight months, visited and examined all the treasury depositories, except those at Nashville, Washington City, and San Francisco. From each depository that I visited I addressed to you a letter, describing exactly its condition. But your instructions require from me, in addition, a general report at the conclusion of my tour of duty, which I now proceed to give.

You directed me to inquire:

"1st. Whether the safeguards against fire, thieves, and burglars are

sufficient in the several depositories."

The depository at Boston, Massachusetts, is the only one which can be regarded as in all respects what a depository ought to be, when it is intended to keep in it millions of the public money. The other depositories may, in general terms, be described as such as will do for the present. In the course of the year, burglar-proof safes have been introduced into several of them, and others of them have been strengthened in various ways. But the appropriation made by Congress was intended simply to cover current expenses, and not to provide permanent defences for the public money. The special appropriations that have been made for strengthening the safety room in the Treasury Department at Washington City, and for improving the Mint at Philadelphia, will effect what is desired at these two points. But many of the other depositories require additional safeguards against fire, thieves, and burglars.

If banks, which are chartered for a term of years only, deem it proper to erect strong vaults, surely government ought to do as much for the security of the public moneys, under a system which is intended to be permanent. We have, at times, in our twenty-three treasury depositories, half as much gold and silver as there are in our thirteen hundred banks; yet, in some of the depositories the safeguards provided for large sums of public money are inferior to those provided by the banks for relatively small amounts of specie.

It is, indeed, averred by some, whose position entitles their opinions to attention, that vaults are not necessary for the safety of the public moneys, and that all that are requisite are burglar-proof safes, guarded by watchmen. But watchmen may relax their vigilance, or be corrupted; and under a system like this, large sums of public money would be kept under a single lock and key. No bank of any respectability, that I ever heard of, trusts its funds in a burglar-proof safe, guarded by a watchman. In a question like this, the experience of those who have long had the custody of large amounts of money is not to be disregarded. In a good treasury system, it is necessary to guard against foes within as well as foes without. Nearly all the

great robberies of banks that are on record, have been committed by the watchmen or other employés of the banks.

It is true, indeed, that no vault which can be constructed by men, can be made so secure as not to be entered by other men, provided full time be allowed them for their burglarious attempts. But, by suitable combinations of brick, stone, and iron, money-vaults may be made so strong as to defy all attacks on them in the time in which burglars usually have to operate. Watchmen cannot be dispensed with; but public money-vaults should be, in all respects, so secure as to leave no hope to the watchmen themselves to break in, even if they should combine with burglars from without.

Each money-vault should have at least two strong doors, fastened by bolts, bars, and clinches, upwards, downwards, and sideways. Each door should have at least one lock of the best construction, and the keys to the locks of the different doors should be kept by different persons. If these precautions had been observed at Pittsburgh, the robbery of ten thousand dollars there (the only robbery that has been committed under the system) would have been prevented.

As auxiliary safeguards, burglar-proof safes are excellent; but good,

capacious, and substantial vaults cannot be dispensed with.

We have, and have had, altogether, some two thousand banks. The robberies of their vaults that have been committed (excepting by their own officers) have been comparatively few. No instance, it is believed, can be adduced of a bank vault being robbed by burglars, when the vault was of proper construction and properly guarded.

"2d. Whether the books, accounts, and returns are kept in that accurate and uniform manner which the law prescribes."

In one depository only did I find any inaccuracies in the accounts, and these were such as could be easily corrected.

"8d. Whether the examinations which the 12th section of the law requires are regularly made, and in such a manner as to fulfill the intentions of the law."

At Washington City, Pittsburgh, Buffalo, Cincinnati, Nashville, Richmond, and Mobile, there are no officers resident required by law to make periodical examinations of the depositories. At the other depositories (one or two excepted) this duty has been regularly attended to. Special letters have been addressed to those officers who have neglected to make the periodical examinations, and it is hoped they will neglect this duty no longer.

All the depositories are subject to examination by special agents appointed by the Treasury Department, and all have in this way been examined this year, except that at Washington. It would be inconvenient to examine that at this moment, owing to the changes the workmen are making in the building.

"4th. Whether the amount of money in each depository corresponds

with the amount which the books and returns call for."

In each depository I found the amount of money which the books and returns call for, excepting that of Pittsburgh. In that there is a

deficiency of about ten thousand dollars, caused by the robbery last year, of which a particular account was given in a former report. No new light has lately been thrown on that robbery, and the perpetrators have thus far escaped detection.

"5th. Whether any thing further can be done to promote the convenience of those officers whose duty it is to receive, keep, pay, and transfer the public moneys, and also the convenience of those to whom payments are made."

In several of the depositories the conveniences for doing business have, during the year, been greatly increased. Something more remains to be done, in this way, at several of the depositories; but a very moderate appropriation for this object will cover all the ex-

"6th. Whether any thing more can be done to facilitate the transfer of the public funds from place to place, and to lessen the expense thereof."

The system of transfer-drafts, described in my former report, continues to work well; but it cannot be applied in the whole extent that is desired, owing to gold and silver being, in some parts of the country, almost entirely superseded, as a currency, by bank paper. In those parts of the country, specie payments have not been formally suspended, but they are systematically evaded by each bank circulating its own notes at such a distance from the place of issue that they cannot be presented promptly for payment, and by circulating in its own neighborhood the notes of some distant banks or branch. The merchant having deposits might demand specie for them; but then they could expect no further "accommodations" from the banks. Rather than be exposed to this inconvenience, they purchase exchange at a premium, as measured in the depreciated currency of their neighborhood, instead of paying gold and silver for treasury drafts at par.

"7th. What disbursing officers keep deposits in the depositories, and what the balance to their credit; and, on the other hand, if any disbursing officers neglect to deposit, how they otherwise keep the money in

their hands."

In my letters from the different depositories, I gave the names of the different disbursing officers that keep deposits therein, and the amount to the credit of each. Generally speaking, the disbursing officers now keep their funds in the treasury depositories, when they can conveniently do so. But there are exceptions to this; and what is strange, (if newspaper reports are to be believed,) several of these exceptions have occurred in Washington City. None of these officers were under the control of the Treasury Department.

Many of the pension-agents conscientiously obey the law; but others conduct their business in such a way that it is impossible to say whether they obey the law or not; while some, as there is the best reason for believing, directly violate some of the most important provisions of the law, by depositing their funds in banks, and paying

the pensioners with bank-notes, instead of gold and silver.

This is the more remarkable, as the Secretary of the Interior, who

has the supervision of the pension-agents, some time since issued a circular, in which he explicitly forbid such doings.

"An arrangement," he said, "having been made by the Treasury Department, under which the Assistant-Treasurers of the United States at the various leading commercial points throughout the country became depositaries of the public funds, the disbursing agents connected with this department are hereby instructed to avail themselves of the facilities thus afforded, as far as practicable, by depositing with the officers such funds as are not wanted for immediate use, and drawing the same from time to time as they may be required.

"This arrangement has been made for the accomodation and security of disbursing officers, in view of the heavy responsibility resting upon them under the provisions contained in the 16th section of the act of August 6, 1844, as found on page 93, Statutes at Large, volume 9, to which, in all its details, attention is specially directed; and it is therefore expected that the instructions above given will be strictly complied with, and that hereafter no disbursing agent of this department will draw any draft or check upon any person other than the officer with whom his funds are directed to be kept."

If examples should be made of a few of the disbursing officers who violate instructions as explicit as these, the effect might be salutary. If each subordinate officer is to obey the laws so far only as to himself seems convenient, we shall have anarchy instead of regular gov-

In order that the system may answer all the objects intended, it will be necessary to multiply the places of deposit for disbursing This can readily be done, if suitable vaults be constructed in the new custom-houses which Congress has ordered to be built.

"8th. Whether the different requirements of the law, and the treasury regulations made in pursuance of the law, are strictly attended to, including that provision which requires public officers to credit the United States with any premium received on drafts."

The different requirements of the law, and the treasury regulations, are, with the exceptions already noted, well observed in the different

depositories.

In every instance in which a treasury draft had been sold by a treasury depositary for a premium, I found the premium duly credited to the United States. But it is alleged that some disbursing officers, in remote parts of the country, sell their own checks on the depositorics at a premium, and put the premium into their own pockets.

In my report to you of last year, I gave a brief history of operations under the constitutional treasury system, showing that, in periods embracing in all nine years, it had worked well, and under the different circumstances of peace and war, of surplus revenue and deficient revenue, of negotiation of loans and of payment of loans.

I also pointed out some of the advantages of this system:

1. In creating a new demand for specie, and thus increasing the stock of it in the country.

2. In checking the banks in their expansions of paper currency, and thus diminishing the force of their subsequent contractions.

3. In avoiding those derangements of banking and commercial operations which are sure to follow the negotiation by government of large loans in bank paper, and the use of banks as agents in redeeming public loans.

4. In preventing those losses to government which are the necessary consequences of suffering public officers to apply them to their private

uses.

5. In giving the government, at all times, the control of its own funds, so that it can apply them to the public service just when and where it chooses—a control it could not have if it should deposit the public money in the banks, and the banks should lend it to their customers.

The experience of another year has served only to strengthen conviction of the excellence of the system, and of its adaptation to the fiscal wants of the United States.

If the public funds had been deposited with the private bankers of California, (a system which some have regarded with favor,) large

amounts would have been lost to the government.

If bank paper had been received in payment for the public lands, and in payment for public dues generally, the notes of many banks in Illinois, Indiana, and other parts of the country, would have become "unavailable funds" in the treasury.

If the public officers had been permitted, as they were formerly, freely to apply the public funds to their private uses, they would have lost immense sums by speculations in stocks and in wild lands, the greater part of which losses would have fallen ultimately on government.

All these evils have been avoided during the past year by a strict adherence to the principles of the constitutional treasury system.

Of itself, it cannot, indeed, do all that is desirable; for, so long as small notes are issued, so long will gold and silver be hoarded or exported. But, as it is all that now stands between us and papermoney inflations similar to those of 1817-'18 and 1835-'36, to be followed by revulsions similar to those of 1819-'21 and 1837-'43, it is a system which ought to be strengthened and extended so that it may be faithfully carried out in all its provisions.

I remain, very respectfully your obedient servant,

WM. M. GOUGE.

HON. JAMES GUTHRIE,

Secretary of the Treasury, Washington City, D. C.

REMARKABLE COINS.—The correspondent of the Augsburg Gazette at Rome vouches for the truth of the following story: "In a box in which he had collected alms, a friar found a coin of five bajocchi that struck him as being unusually thick. On examining the coin more closely, he found that it had only a thin coating of copper, which he gradually and cautiously removed. The holy man exclaimed, 'Un miracolo!' when he discovered a high forehead; 'Santa Madonna!' when a large beard presented itself; and 'San Antonio!' when he learned by the inscription that the little painting in his hand was the portrait of Mazzini."

### GOLD, SILVER, BANK NOTES, AND COINAGE OF THE UNITED STATES.

(From the Annual Report of the Secretary of the Treasury, December, 1855.)

Statement of the amount of gold and silver supposed to be in circulation, of the amount supposed to be in the banks, of the whole amount supposed to be in the country, and of the amount of bank notes in circulation in different years, according to the authorities quoted in the margin.

Mem.—The amounts of specie in the banks and of bank notes in circulation from 1835 to 1855, inclusive, have been taken from the annual treasury reports on the condition of the banks. The amount of specie supposed to be in circulation in different years is according to the authorities quoted in the margin. The estimates are from Doc. 34, (page 280,) appended to the Report on Finances of December 4, 1854, except that for 1855, which has been completed from data more lately received.

### NOTES AND OBSERVATIONS.

For the sake of convenience, the years in the table will be divided into different periods:

### First period from 1790 to 1804.

The only estimates we have of the amount of specie in the country, and of bank notes in circulation, in this period, are those offered by Blodget in his Economica, for the years from 1790 to 1804, inclusive. He was an ingenious and intelligent man; but his estimates must be regarded as mere conjectures. In those days, no account was taken at the custom-houses of the amount of gold and silver exported and imported; and the banks published no statements of their affairs.

The South-American mines yielded, in this period, a fair return, and great part of their produce found its way to Europe through the United States. The suspension of specie payments by the Bank of England in 1797, and the free use of paper money on the continent of Europe, diminished to some extent the demand for specie in the

eastern hemisphere, and had a tendency to increase the amount in

The Mint at Philadelphia commenced operations in a regular way in 1793. The aggregate coinage of gold and silver from that time till 1804, was \$4,138,204.25, or less than \$350,000 for each year. The coin in circulation was chiefly Spanish and Portuguese.

In the year 1790, with which Mr. Blodget commenced his table, the

following named banks were all that were in operation:

| Name.                  | Location.       | Capital.    | Began operations. |
|------------------------|-----------------|-------------|-------------------|
| Bank of North America, | Philadelphia, . | .\$750,000. | 1782              |
| Bank of New-York,      |                 |             |                   |
| Massachusetts Bank,    | Boston,         | 400,000.    | 1784              |
| Bank of Maryland,      | Baltimore,      | 400,000.    | 1790              |

In the year 1791, the first Bank of the United States was instituted, with a capital of ten millions of dollars. Except for a short time after its commencement, it issued no notes of a less denomination During this period, few banks, except perhaps than ten dollars. those of New-England, issued notes of a less denomination than five dollars.

As a consequence, gold and silver were, as is seen in Blodget's tables, and as is confirmed by other authorities, more abundant than bank notes.

A committee of the United States House of Representatives, Campbell P. White, Chairman, say, in a report dated March 17, 1832:

"From 1783 until the late war, (that is, the war of 1812-'15,) the quantity of gold and silver in circulation was very large-amply sufficient to maintain a salutary degree of regularity in the total amount of currency, and calculated to secure, as far as legal regulations can secure, the very desirable object, that 'every person who has coins of either silver or gold, may easily exchange them for coins of the other metal, and that the people may enjoy the advantages of using either species of coins, according to convenience or pleasure."

A committee of the United States Senate say, in their "Report on

Coins," February 22, 1831:

"It may be affirmed that our currency, at the adoption of the Constitution, was almost entirely composed of gold and silver money: the Bank of North America was in operation, but its notes had not likely much circulation. In 1791, the first Bank of the United States was instituted; but it is presumed that its issues were neither very great, nor perhaps intended to be of that denomination which passes into wide circulation, as General Hamilton, who projected that institution, was of opinion that 'bank circulation is desirable rather as an auxiliary to, than as a substitute for, that of the precious metals. It is believed that, so lately as the year 1800, coin constituted the bulk of the circulation, and was the chief instrument used for effecting exchanges of small amount.' Bank notes were rarely seen south of the Potomac, or west of the mountains; and having had probably a restricted circulation in the interior of any State, it is not unlikely but that the people of the United States, until that period, (banks being

too few and distant to be used as general depositories,) did enjoy the advantage of 'using either species of coins, according to convenience or pleasure.'"

A Virginia writer gives the following account of those times:

"From the adoption of the federal Constitution in 1787 down to 1804, banks were unknown in Virginia, with the exception of a branch of the old United States Bank in Norfolk, about 1799 or 1800. The paper of this bank scarcely found its way into the interior of the country; and it may be truly said, the currency of the country was metallic. Until the year 1798, no people enjoyed more happiness or prosperity than the people of the United States, nor did any country ever flourish more within the space of time. The desk of every agriculturist in Virginia had some gold or silver to spare, if he was a prudent, industrious man; or he had something like money to spare in the hands of his merchant, who, in the days of which I am speaking, acted as a banker to his prospering customers. Nor was any interest paid upon such moneys as might be deposited in the hands of the merchant; because both planter and merchant considered themselves accommodated by the arrangement; the planter in having his money safely kept for him till he wanted to use it, and the merchant in having the use of the money until it was called for. Under such circumstances none will doubt the happy condition of both planter and merchant; and if the view be somewhat extended, it will be found that this state of prosperity was not confined to one or two classes of society, but extended to all. The man embarrassed might readily sell something and to advantage, to pay his debts. The currency of the country, being specie, was widely scattered through the land, and in diversified hands, so that its concentration at any particular point was impossible; and consequently its removal from the country could not happen to any great extent.

"I know there are many who, in order to effect present objects, insist that commerce could not be carried on without the aid of banks. To this I answer, how was commerce carried on before we had banks? Will any body deny there was any commerce in the country at that time? No one will be found hardy enough to take this ground; for every intelligent man of forty years knows that before there were any banks in Virginia the foreign commerce of the country was greater than it has ever been since, and the country far more prosperous. Nor was there the least inconvenience in transmitting money from one point to another through the merchants, whose credit then was as good as the credit of the banks now, if not better. Banks have destroyed

the credit and confidence which men had in one another.

"No people had more cause to rejoice than the people of Virginia; but alas! the banks came, and all things became changed. Like the Upas tree, they have withered and destroyed the healthful condition of the country, and inflicted on the people political and pecuniary diseases of the most deadly character."

According to Mr. Blodget, the number of banks, and the amount of their authorized capital, in the different years of this period, was

as follows:

| Yeare.               | No. of<br>Banks. | Capital<br>authorised.                   |
|----------------------|------------------|--|
| 179 <b>0</b><br>1791 |                  | \$1,950,000<br>12,950,000                |
| 1792                 | 16               | 17,150,000<br>18,000,000                 |
| 1798<br>1794         | 17               | 18,000,000                               |
| 1795<br>1796         |                  | 19,000,00 <b>0</b><br>19,200,00 <b>0</b> |
| 1797<br>1798         | 25<br>25         | 19,200,000<br>19,200,000                 |
| 1799                 | 26               | 21,200,000                               |
| 1800                 | 31               | 21,350,000<br>22,400,000                 |
| 1802<br>1803         |                  | <b>22,6</b> 00,00 <b>0 26,000,000</b>    |
| 1804                 |                  | 39,500,000                               |

But a small part of the capital of the State banks was paid in, so that, probably, during the greater part, if not the whole of this period, the capital of the first Bank of the United States exceeded the paid-up capital of all the State banks put together.

According to a table which Mr. Woodbury, as Secretary of the Treasury, appended to his report on the banks, of January 4, 1837, the banks were, in different intervals of this period, distributed as follows:

|                      | 17            | 92.                    | 18               | 01.                    | 18               | 05.                    |
|----------------------|---------------|------------------------|------------------|------------------------|------------------|------------------------|
| States.              | No. of Banks. | Capital<br>authorised. | No. of<br>Banks. | Capital<br>authorised. | No. of<br>Banks. | Capital<br>authorised. |
| Maine,               |               |                        | 1                | \$300,000              | 5                | \$1,100,000            |

### Second period, from 1804 to 1812.

In a copy of his Economica, at present in the Register's Office, Mr. Blodget inscribed in his own handwriting estimates of the amount of bank notes in circulation, and of the amount of specie in the country in 1805, 1806, and 1807. These are inserted in the table, together with

an estimate made by Mr. Gallatin in 1830—'31, of the amount of notes in circulation and of the specie in the banks at the commencement of 1811. They are the only estimates on record, or at least the only ones worthy of attention, of the amount of specie and bank notes in this

period.

At this time the mines of the precious metals were very productive. "The annual supply of the mines of America, Asia, and Europe," says Gallatin, "reached its highest point in the years 1803–1810, and amounted then to fifty millions of dollars, or to about one and one fourth per cent of the whole quantity of the precious metals then existing in Europe and America." A goodly portion of this treasure reached the United States, but a very great part of it was exported, almost as soon as imported, to China and the East-Indies. There was little demand for it in England, as inconvertible paper was then the money of that country.

The coinage of gold and silver at the mint at Philadelphia amounted, from 1805 to 1813, to a little more than eight millions, or on an average a little more than \$900,000 a year. The coins in use con-

tinued to be chiefly Spanish and Portuguese.

Notes of a less denomination than five dollars were in free use in New-England, and perhaps in parts of New-York and New-Jersey; but not much in the other States. The Bank of North America is, it is believed, the only bank in Pennsylvania that issued dollar notes. The bank of the United States issued no notes of a less denomination than ten dollars.

The charter of this last-named bank expired in March, 1811. According to a report made by Mr. Gallatin, as Secretary of the Treasury, in March, 1809, the average amount of the circulation of this bank and its branches was four millions and a half of dollars, while the average amount of specie in its vaults was five millions. At that particular time, the specie in the vaults of the bank and its branches exceeded the average by several million dollars.

Mr. Crawford says in his report of February, 1820:

"From a return of a former Bank of the United States, made to the treasury in 1808, it appears that with \$15,300,000 of specie it circulated only \$4,787,000 of notes. Another return made in 1810 shows

that its condition was not materially changed."

The policy of the banks in New-England was widely different. They pushed their issues to the very limits of their credit, some of them issuing notes for even fractional parts of the dollar. The result was, that there was in 1808—'9 a grand explosion among the banks of New-England, by which most of them were shattered, and some of them totally destroyed.

The directors of the Bank of South-Carolina, in a report dated October 1, 1819, give the following view of the condition of the banks up

to 1812:

"During a long period of that revolution which, for a quarter of a century, has convulsed and desolated Europe, the United States enjoyed the great advantages of a neutral nation. As long as a state of war existed between Spain and Great Britian, the citizens of this

country became the carriers and commercial agents of Spain, and nearly all the metallic treasure of Mexico passed through our hands. During this period gold and silver were abundant, and there existed no difficulty in procuring specie for any demand, and to any amount, which our financial and commercial arrangements required. The vaults of our banks are said to have overflowed with silver. From the peace of Amiens, (in 1801,) however, this influx of silver abated: our commerce with the Spanish colonies, which had been the accidental result of war, declined; and the wealth of that country was restored in a great measure to its current channels; and when the invasion of Spain by Bonaparte, in 1808, threw that ill-fated country and her colonies into the arms of Great Britain, a new direction was given to their treasure, and almost a new monopoly created for their commerce. At the commencement, the embargo (which our disputes with the European powers induced our government to impose on our commerce) began to act with great effect on the specie capital of the country; for, when our produce could be no longer exported, all who had any engagements to meet in foreign countries, all to whom remittances abroad were advantageous, if not indispensable, transmitted specie as the commodity most easily concealed and transported. From this time the amount of specie rapidly diminished. The unsettled state of our commercial and political regulations with foreign powers, during the three succeeding years, prevented a new accumulation, and soon after our declaration of war against Great Britain, in 1812, the banks throughout the Middle and Southern States, which for some years had been paying specie reluctantly and sparingly, suspended altogether their specie payments."

### Third period, from 1812 to 1820.

1812.—War with Great Britain declared in June, and an attempt made to carry it on by loans of bank credits and bank notes.

1813.—The banks of the Middle States lend liberally to government, and as a consequence increase their issues. The banks of the New-England States lend sparingly, if at all; and by diminishing their issues cause specie to flow from the other States into New-England. Part of this is exported in payments for foreign goods.

1814.—The banks in the Middle States continue to lend their notes and credits to government, and specie continues to flow into New-England, whence part of it is exported. There is also an export of specie through Amelia Island, on the coast of Florida, adjoining Georgia. In August, the banks of New-York, Philadelphia, and Baltimore suspended specie payments, and the suspension became general throughout the Union, with the exception of the banks of New-England. Through the residue of the year, specie bore a premium of from 14 to 20 per cent in the bank notes of the large cities of the Middle States.

1815.—The news of peace was received in February, only six months after the suspension of specie payments, and specie, which had been at New-York at 15 per cent premium in January, fell immediately

to 2 per cent. But the banks did not resume specie payments, and instead of diminishing their issues, increased them, being encouraged therein by the United States government, which continued to receive their inconvertible paper in payment of public dues. From June to December, specie was at New-York, Philadelphia, and Baltimore, at various rates of premium, from 9 to  $22\frac{1}{2}$  per cent.

The exports of specie increased, not so much to England, which continued to use inconvertible paper, but to the East-Indies, China, and other countries. The author of a pamphlet, signed Publicola, published at New-York in 1815, says: "Those who believe that bank paper, is redundant, may fairly urge that the report of the real scarcity of specie has been industriously circulated; that it was as firmly maintained four months since as at the present moment; and, in the intermin, upwards of six million dollars have been exported. Certain English houses in New-York and Baltimore can corroborate this fact."

1816.—The banks continue to issue abundantly, and the export of specie continues accordingly. In July, American coin was at 16 to 17 premium at Philadelphia, and Spanish at 18 to 18½. Afterwards, chiefly in consequence of a resolution of Congress, prohibiting the receipt of inconvertible paper in payment of public dues, after the 20th of February, 1817, there is a reduction of the amount of paper in circulation, and a fall in the premium on specie. It was at Philadelphia at 6 to 7 per cent premium in December. The coinage of gold and silver this year was only \$28,000. In 1815 it was only \$20,000.

1817.—The Bank of the United States opened its doors at Philadelphia, January 1. By the 20th of February there was a partial resumption of specie payments. The banks in some of the States diminished their issues considerably. But the vacuum thus created was fully supplied by the United States Bank, so that at the close of the year there appears to have been as much paper in circulation as at the beginning.

1818.—In the spring of this year the local bank mania reached its height. More than two hundred new banks appear to have been projected in various parts of the Union. The united issues of the United States Bank and of the local banks drove specie from the country in large quantities. The directors of the United States Bank strove to arrest this evil by forced importations of specie. Between July, 1817, and July, 1818, upwards of seven millions were imported at a cost to the Bank of about \$500,000; but as the original cause of the efflux, namely, an excess of paper currency, continued to operate, those millions went out of the country almost as fast as they came in. "I myself have seen," said William Jones, the first President of the United States Bank, "a detailed statement of five million dollars exported from the ports of Boston and Salem alone in twelve months, and from this data the aggregate amount exported in twelve months from the United States could not have been in the same period short of twelve millions of dollars."

The directors of the Bank of the State of South-Carolina say: "In

the first six months of 1818, it is probable that upwards of \$800,000 in specie were thrown into general circulation in the city of Charleston. It is probable that by the first of November in that year not \$50,000 remained in the State: we are confident that not \$10,000 could have been found in the city of Charleston."

1819.—During this year the contraction begun in July, 1818, was continued, and multitudes of banks and individuals were broken. The amount of paper currency was greatly reduced, and yet specie did not flow into the country in any great quantities. This appears

to have been owing chiefly to the following causes:

First. The diminution in the supply from the Mint in South America. From 1803 to 1810 they had yielded, according to Gallatin, fifty millions a year; from 1811 to 1830, embracing the period now under consideration, they, according to the same authority, yielded only twenty-seven millions a year.

Secondly. The preparations making for the resumption of specie payments by the Bank of England. These greatly increased the

demand for the precious metals in Great Britain.

Thirdly. The efforts made by some of the governments of Europe to supplant their paper currencies with specie. The gold and silver imported by Austria and Russia, with that view, are said to have amounted, in one year alone (1818) to nearly one hundred million dollars.

1820.—This year was much as 1819; but towards the close of it, the banks settled down into what Mr. Niles, in his Register, calls "a state of regularity," but the effects of the disorderly banking of previous years were severely felt through the land.

According to Mr. Crawford's computation, the whole amount of specie in circulation at the commencement of 1820 was only four

millions and a half.

Of the amount of bank circulation, and of specie in the vaults of the bank, for any of the years of this period, we have no estimates, except those made by Mr. Crawford in 1819-'20, and those made by Mr. Gallatin in 1830-'31.

As Mr. Gallatin had fuller data to guide him, his estimates are inserted in the table.

Mr. Crawford's estimates are as follows, in round millions:

| Capital,          | Specie in the bank, Otroulation. |                            |  |  |  |
|-------------------|----------------------------------|----------------------------|--|--|--|
| 1813,\$65,000,000 | \$28,000,000                     | \$62,000,000 to 70,000,000 |  |  |  |
| 1815, 88,000,000  | 16,500,000                       | 99,000,000 to 110,000,000  |  |  |  |
| 1819,125,000,000  | 21,000,000                       | 45,000,000 to 53,000,000   |  |  |  |

Mr. Gallatin is confident that the amount of bank-note circulation could not have exceeded thirty millions in 1811, forty-seven millions in 1815, and seventy millions in 1816, and he believes that the amount was but little below forty-five millions in 1819–'20. Yet he thinks these variations in the country quite sufficient to cause all the pecuniary and commercial evils with which the country was afflicted for many years after the close of the war.

According to the table appended to Mr. Woodbury's report of

January 4, 1837, the banks were, just before the commencement of and at different intervals of this eventful period, distributed among the States as follows. Their capital is "estimated."

| J                    |                 | r., 1811.        | Jan., 1815.   |   | JAN. 1916. |              | Jan. 1820. |                      |

### Fourth period, from 1820 to 1830.

The only estimate we have of the amount of paper circulation in this period, after the commencement of the year 1820, is that of Mr. Gallatin for the 1st of January, 1830. The increase of the number of banks in these ten years, was, according to the same authority, only twenty-two, of their capital only eight millions, and of their circulation only sixteen millions and a half; yet, from the accounts of such of the banks as have made returns, and from the evidence of contemporary writers, there were, in this period, ruinous fluctuations in the amount of our paper currency.

With the year commencing October 1, 1820, the usage began of requiring at the custom-houses accounts of the amount of gold and

silver imported and exported.

In the two years ending September 30, 1822, according to these accounts, the export of gold and silver exceeded the imports in nearly ten millions. This was a heavy drain from a country in which there was, in 1820, according to Mr. Crawford, only four and a half millions in circulation, and, according to Mr. Gallatin, less than twenty millions in the banks.

The main cause of this great drain was the resumption of specie payments by the Bank of England in 1821, with the simultaneous suppression in that country of all notes of a less denomination than five pounds sterling.

"During the four years which immediately followed the resumption of specie payments in England," says Mr. Gallatin, "that occurrence caused an extraordinary demand of more than twenty millions sterling in gold, or about twenty-four millions of dollars a year, being near three times as much as the annual supply of that metal; and this demand was met without any difficulty or sensibly enhancing the price of gold," that is, as estimated in silver.

England, being the creditor of all the world, did not find it very difficult to collect as much gold as she wanted; but the demand pressed heavy on the United States, a debtor country. During this pres-

sure our gold coins all left us.

After this pressure abated, others, having their origin in various causes, took effect, so that, although in the eight years ending with September 30, 1828, the imports of gold and silver were upwards of fifty-three and a half millions, they were exceeded by the exports in the sum of nearly eleven millions.

Mr. John White, the Cashier of the Branch Bank of the United States at Baltimore, in a letter dated February 15, 1830, and addressed to Mr. Ingham, Secretary of the Treasury, gave the following striking view of the condition of things in this and part of the preceding

period:

"Congress fixed the relative value of gold at one for fifteen of silver; and, under the natural presumption that gold and silver coin would compose a portion of the general circulation, it has also been enacted that a tender of either of these metals should be the only legal mode of discharging obligations. In practice, however, and in fact, our currency consists altogether of paper. In this State, (Maryland,) and in Pennsylvania, Virginia, and perhaps some others, the fractional parts of a dollar circulate in sufficient quantity to purchase with coin marketing, or other low-priced necessaries; but in the Carolinas, Georgia, and all that great district eastward of Pennsylvania, comprising the States most distinguished for commerce and manufactures and for wealth, there is no transfer of the value of the established unit that is not effected by paper; this bank paper is sustained by public confidence, on a specie basis, considered sufficient to liquidate balances accruing among the several States, and to supply the demands of foreign commerce.

"The banks, which furnish the circulating medium, find their interest, as they conceive, in sustaining the necessary issues by the smallest amount of metallic coin consistent with their ideas of efficiency and

sufety \* \* \* \*

"It is a practical truth, uniformly realized, that paper and coin, of the same denomination, will not circulate together; and my assent to the correctness of that principle convinces me that the laudable intention of the committee of the Senate, in recommending the coinage of dollars, with the view of improving the currency, by placing and maintaining

them in general circulation, will, without doubt, be entirely frustrated in all those States where notes of one dollar are issued. Entertaining the opinion that the banking system, judiciously administered, confers many and important advantages upon commercial and manufacturing communities, and conceiving also that the progress in prosperity of every nation is intimately interwoven with a wise regulation of pecuniary concerns, I have been accustomed to advert with interest to all

important vicissitudes.

"Looking back to the peace of 1815, a short period, fresh in the memory of every man, the wretched state of our currency for the two succeeding years cannot be overlooked. The disasters of 1819, which seriously affected the circumstances, property, and industry of every district of the United States will be long recollected. A sudden and pressing scarcity of money prevailed in the spring of 1822. Numerous and very extensive failures took place at New-York, Savannah, Charleston, and New-Orleans in 1825. There was a great convulsion among banks and other moneyed institutions in the State of New-York in 1826. The scarcity of money among the traders in that State, and eastward, in the winter of 1827 and 1828, was distressing and alarm-Failures of banks in Rhode-Island and North-Carolina, and amongst the manufacturers of New-England and of this State, characterize the last year; and intelligence is just received of the refusal of some of the principal banks in Georgia to redeem their notes with specie; a lamentable and rapid succession of evil and untoward events, prejudicial to the progress of productive industry, and causing a baneful extension of embarrassment, insolvency, litigation, and dishonesty, alike subversive of social happiness and morals. Every intelligent mind must express regret and astonishment at the occurrence of these disasters in tranquil times and bountiful seasons, amongst an enlightened, enterprising, and industrious people, comparatively free from taxation, unrestrained in our pursuits, possessing abundance of fertile lands and valuable minerals, with capital and capacity to improve, and an ardent disposition to avail ourselves of the advantages of those great bounties.

"Calamities of an injurious and demoralizing nature, occurring with singular frequency, amidst a profusion of all the elements of wealth, are well calculated to inspire and enforce the conviction that there is something materially and radically erroneous in our monetary system, were it not that the judgment hesitates to yield assent when grave, enlightened, and patriotic senators have deliberately announced to the public, in a recent report, that 'our system of money is in the main excellent, and in most of its great principles no innovation can be

made with advantage."

In 1829 and 1830, the last two years of this period, the imports of gold and silver exceeded the exports in the sum of nearly eight millions and a half of dollars, exhibiting a remarkable contrast with the preceding eight years.

This excess in the imports of gold and silver appears to have been

owing mainly to the following causes:

First. The measures taken by Virginia, Maryland, and Pennsylvania

for suppressing the circulation of small notes within the bounds of those States. The act of Pennsylvania, which proved most effective, went into full operation January 1, 1829.

Secondly. A practice adopted by the Bank of the United States of drawing bills on England for the accommodation of the merchants engaged in the trade with China and the East-Indies. Previous to this the usage had been to export silver directly to China and the East-Indies in payment for our imports from those countries. The new system of bill drawing, adopted by the United States Bank, deferred, though it did not remove, the demand for specie for exportation.

### Fifth period, 1830 to 1837.

Near the commencement of this period estimates were made by a committee of the Senate, of which Mr. Sandford was chairman, and by Mr. Taney, as Secretary of the Treasury, of the amount of specie and bank notes in circulation; but as these estimates had reference to an average of years, rather than to any particular year, it is thought best to insert them in the notes rather than in the table, as, without the explanations offered by the authors, they might mislead the reader.

Mr. Sandford says in his report of December 15, 1830:

"The coins now in the United States, and the bank notes now circulating, are estimated to amount to about 100 millions of dollars. The coins are estimated to amount to about 23 millions of dollars, of which sum it is estimated that about 15 millions of dollars are held by the banks, and about 8 millions of dollars in circulation among the people. The bank notes in circulation are estimated to amount to about 77 millions of dollars. The sum of 15 millions of dollars of coin is the estimated average of the coins held by the banks. The banks in the principal sea-ports have, at this time, an increased quantity of coin."

A committee of the House of Representatives, of which Mr. Campbell P. White was Chairman, in a report dated March 17, 1832, made an estimate that the circulation of the banks had increased, from January 1, 1830, to March, 1832, in the ratio of nearly fifty per cent, without any increase of the specie in their vaults. To guide them in this estimate they had returns from the United States Bank, and from the banks in Massachusetts, Phode-Island, New-York, and Pennsylvania.

Mr. Taney, Secretary of the Treasury, offers the following observa-

tions in a special report, dated April 15, 1834:

"Judging from the best information which the department has been able to obtain, the paper of the various banks (including the Bank of the United States) in circulation in ordinary times, amounts to at least 80 millions of dollars. Of this sum the Bank of the United States furnishes generally less than 20 millions, and the various State banks more than 60 millions; the specie in the vaults of the same banks, to support these extended credits, does not, probably, exceed 25 millions.

"In estimating the amount of specie, I confine myself to the coin supposed to be in possession of the banks. In some of the States the circulation of notes below five dollars is prohibited by law, and in those States there is a considerable amount of specie passing from hand to hand, and forming a part of the ordinary circulation. It does not, however, probably exceed four millions.

"Gold and silver will never circulate where banks issue notes which come in competition with them; for it will invariably happen that when the circulating medium is composed of different kinds of money, and one of them is less valuable than the other, but not sufficiently depreciated to be discredited, the inferior will, after a time, become the general currency, and the more valuable will entirely disappear.

as one dollar; for silver dollars are never found in circulation where paper ones are freely issued by the banks. In order, therefore, to bring the precious metals into use, the rivalship of paper must be effectually taken away. We must not only remove the notes of the Bank of the

United States, but also those of the State banks."

A select committee of the Senate, in a report on coins, dated February 21, 1831, and a select committee of the House, in a report on the same subject, and of the same date, both estimate the amount of silver in circulation at five millions of dollars. This is one million less than the estimate of Mr. Taney offered in 1834, and five millions less than Mr. Gallatin's estimate for 1830.

On the 10th of July, 1832, the House of Representatives, on motion of Mr. Wild, of Georgia, adopted a resolution directing the Secretary of the Treasury to lay before the House, at the next and each successive session of Congress, the best accounts he could collect of the condition of the banks throughout the Union. This was the first and the only action ever taken by either branch of Congress to have the accounts of the banks collected annually and regularly arranged.

From the reports made under this resolution, and from a report made by the Clerk of the House in 1834, have been inserted in the table the amount of notes in circulation, and the amount of specie in the vaults of the banks, in the different years from 1834 to 1855, inclusive.

In 1831, the exports of specie exceeded the imports in the sum of \$1,708,986. In 1832, there was a small excess of imports, namely: \$251,164. Without looking further, the causes for this may be found in the great increase of paper currency adverted to in Campbell P. White's report.

In the next four years, 1833 to 1836, inclusive, the imports of gold and silver exceeded the exports in the enormous sum of \$36,023,759, being as much and more than half as much again as, according to the report of the senatorial committee of 1830, was the average of the whole amount in the country.

This great increase in our stock of the precious metals was owing chiefly to the following causes:

- 1. The increasing productiveness of the mines of the precious metals in various parts of the world, particularly in the gold mines of Russia and the silver mines of Mexico.
- 2. A succession of good harvests in England, which enabled the banks of that country greatly to increase their issues. This raised the price of cotton and of other American products, and thus increased our ability to buy gold and silver abroad. At the same time English capitalists increased in various ways the credits they granted to the people of the United States.

3. The measures taken by Gen. Jackson to have the amount of our

foreign indemnities brought home in gold.

4. The "specie circular," which forbade aught but gold and silver to be received in payments for the public lands.

5. The act of Congress of 1834 providing for a new issue of gold

coins, and correcting the under-valuation of gold at the mint.

6. The increased supply of gold from our own mines in the Southern States. From 1804 to 1829, a period of twenty-six years, the whole amount was only \$296,000. From 1830 to 1836, the amount was \$4,595,000. This was so much in addition to the imports.

7. An increase of our trade with Mexico and a decrease in the exports of the precious metals to the East-Indies and China. From 1821 to 1827, a period of seven years, these exports to China alone were \$25,202,521, being on an average \$3,600,000 a year. From 1828 to 1836, a period of nine years, they were only \$4,428,999, or an average of \$472,111 a year.

8. The acts passed by nearly all the States (unfortunately soon repealed by most of them) to prohibit the circulation of small notes.

9. The loans to the amount of twenty million dollars, negotiated in Europe by the United States Bank, in order to sustain itself in its operations, after so much of its capital as consisted of public stock had been redeemed by the government.

10. The rates abroad of State stocks and other securities, with the

view of obtaining the means of making railroads and canals.

11. The desire to establish new banks, which led, especially in South-Carolina and Louisiana, to importations of specie, expressly with this object.

12. The war between the United States Bank and the deposit banks, which made it politic, not only to the parties immediately concerned in that war but to all the banks in the country, to increase their reserve of specie.

The House committee of 1832, of which Mr. C. P. White was Chairman, speaking of the liability of banks to redeem their notes with

specie, say:

"This liability is a powerful restraint on issues during an adverse balance of payments with foreign nations; but at all other times it is nominal. There is no example in history of a currency similar to that of the United States. It is bank notes issued without restraint, except when a high rate of foreign exchange prevails."

On whatever side may have been the balance of trade or the balance of debt, the balance of payment was, during these years, greatly in favor

of the United States. The bank, consequently, issued notes "without restraint." Each import of specie increased the issue of notes by the old banks, and each increased issue of paper led to the establishment of new banks; the result was that the State banks, which, according to Mr. Gallatin, had, in 1830, numbered only 329, with a capital of 110 millions, increased, according to the treasury reports, by the 1st of January, 1837, to 624, or, including branches, to 788, with a capital paid in of 290 millions. In 1830 there were no local banks in operation in either of the States of Kentucky, Indiana, Illinois, Missouri, or Arkansas, only one in Tennessee, one in Mississippi, two in Alabama, four in Louisiana, eleven in Ohio, and one in Michigan. In all the Western and South-western States there were, in 1830, only eighteen banks, with capitals amounting to \$9,462,268. By the 1st of January, 1837, the number of banks in these States was increased to 161, including branches, with paid-up capitals of the amount of \$88,699,974.

In May, 1836, the Bank of England found it necessary to change its policy, and require payments from the "American houses," to whom it had, up to this time, granted credits so abundantly. So powerful an impetus, however, had been given to the banking movement in the United States, that notwithstanding this check, the banks continued to increase in numbers and in the amount of their issues.

While things were in this condition, the Congress of the United States passed an act to take "the surplus revenue" from the selected banks and deposit it with other banks and with "the States." If the "surplus revenue" had existed in the form of "surplus specie," in the vaults of the banks, the measure would have been a wise one. But the "surplus revenue" never had any existence, except in the form of inscriptions of credit on the books of the banks. These bank credits Congress ordered to be suddenly and violently transferred from bank to bank, and from place to place, without any regard to the laws of trade.

The combined action of the Bank of England, and of the Congress of the United States, was too much for the banks; as if by common consent they all stopped specie payments in May, 1837.

### Sixth period, from 1837 to 1843.

During the residue of the year 1837, specie bore a premium at Philadelphia, of various rates, up to 12 per cent, and the notes of the banks of the different States were at various and fluctuating rates of discount, in some instances as much as 20 per cent, when measured, not in specie, but in the paper of the Philadelphia banks.

The banks of the city of New-York immediately took measures for the resumption of specie payments at the earliest day possible. But the banks to the South and West adopted an opposite course of policy. In the course of the year, there was, according to the treasury reports, an increase of forty-one in the whole number of the banks and their branches

The supply of specie in the various markets of the world being abundant, the imports of the precious metals exceeded the exports, in

1837, in the sum of more than four millions, and in 1838 in the sum of more than fourteen millions. In the two years ending on the 30th of September, 1838, the stock of specie in the country was, according to the custom-house books, increased in the amount of nearly nineteen million dollars. The main cause of this increase was the action of the New-York banks in restricting their own issues, and thereby those of the banks of New-England and of some of the other States. Part of these imports of gold were from shipments made by the Bank of England, with the express view of enabling the American banks to resume specie payments.

In May, 1838, the New-York banks resumed accordingly, and their conduct was immediately imitated by the banks of New-England.

In August, 1838, the banks of Philadelphia professed to resume specie payments, and by the first of January, 1839, there was at least

a nominal resumption throughout the Union.

In little more than a year, or on the 9th of October, 1839, the banks in Philadelphia suspended specie payments for the second time, and were followed therein by all the banks to the south and west of that city, and also by the banks of West-Jersey and Rhode-Island. The Bank of the State of Missouri did not, indeed, stop payment on its own notes; but, as it traded on the notes of other Western banks, it became an issuer of inconvertible paper. The banks of Rhode-Island soon resumed specie payments. The banks of South-Carolina resumed in June or July, 1840. All the other banks, to the south and west of New-York, (with the exception of those of East-Jersey and a few others scattered in different places,) refused to pay specie on demand.

After this second suspension had lasted for about fifteen months, the banks of Philadelphia made another effort to resume specie payments, but continued it for only twenty days, namely, from January 15 to February 4, 1841. They then, for the *third* time, suspended specie payments, and did not resume them effectively till the 18th and 19th

of March, 1842.

During the years 1838, 1839, 1840, 1841, and part of 1842, the notes of the banks to the south and west of New-York were at various rates of discount, from 1 to 5, to 10, to 15, and even to 80 per cent; and specie bore various rates of premium, up to 14 per cent, as measured in Philadelphia paper.

The number of banks and their branches, the amount of capital paid in, and of notes in circulation, near the 1st of January in each of these

years, was, according to the treasury reports, as follows:

| January 1. | No. of Banks. | Capital paid in. | Circulation.  |
|------------|---------------|------------------|---------------|
| 1837,      |               | \$290,000,000    | \$149,000,000 |
|            |               |                  | 116,000,000   |
|            |               |                  | 135,000,000   |
|            |               |                  | 107,000,000   |
|            |               |                  | 107,000,000   |
|            |               |                  | 83,000,000    |
|            |               |                  | 58,000,000    |

From this it appears that, for several years after the general sus-

pension of specie payments in May, 1837, the banks continued to increase in number and in the amount of their capital paid in.

Between the first of January, 1837, and the first of January, 1838, they reduced their circulation from 149 to 116 millions, and in the year 1838 the specie imports exceeded the exports in upwards of 14 millions. Between the 1st of January, 1838, and the 1st of January, 1839, they increased their issues from 116 to 135 millions, and then the exports of specie exceeded the imports in the sum of upwards of three millions.

The resumption of specie payments by the banks of Philadelphia, in March, 1842, was a cocreed one, suddenly brought about by the action of the Legislature of Pennsylvania. The alternative was presented to them of resuming, or else of issuing an additional amount of small notes, called "relief notes," in aid of the State's finances. The banks had not made suitable preparations for resuming; but they chose to make the attempt, rather than be more deeply involved in the fiscal embarrassments of the State government.

The resumption of specie payments by the banks at the south and west of Pennsylvania was also a coerced one, but brought about more

by force of public opinion than by legislative action.

Having made no suitable preparations for resuming, they were forced to make sudden and great reductions in the amount of notes issued and credits granted. The distress thus produced reached its highest point in September, 1842, when there was a tremendous convulsion among the banks at New-Orleans, the effects of which were not confined to the South and West, but were felt throughout the Union, not excepting those States in which specie payments had been sustained since May, 1838.

On the 1st of January, 1837, when the banks all professed to pay specie, their circulation was, according to the treasury tables, 149 millions. By the 1st of January, 1843, it was reduced to 58 millions, or, making allowance for a few banks for which no returns were received, about 60 millions. In the short period of six years, the bank currency was reduced considerably more than one half.

A ruinous fall of prices was the consequence, and many business men found it impossible to comply with the engagements they had entered

into on the previous paper-money inflation.

Some parts of the country were left for a time without any circulating medium. The bank paper they had used became worthless, and sufficient time had not elapsed for gold and silver to flow in and take the place of the paper.

### Seventh period, from 1843 to 1855.

The banks, to use a popular speech, did not fairly "touch bottom" till the autumn of 1842, and they remained at the bottom till the spring of 1843. From that time they began to improve in their condition.

Owing to the vacillating conduct of the banks, and to the extent in which specie was supplanted by inconvertible paper, in the four years

from 1839 to 1842, the exports of the precious metals exceeded the imports in nearly eight millions and a half. So effective a demand, however, was created for specie by the reduction of bank-note circulation in 1842–'43, that, in the nine months ending June 30, 1843, the imports exceeded the exports in the then unprecedented amount of twenty millions.

As the banks of New-York and New-England (with the exception of a short intermission on the part of the banks of Rhode-Island) had paid specie regularly after May, 1838, they soon recovered from the effects of the great revulsion of 1842–'43. The banks in the great tier of grain-growing States, extending from New-Jersey in the east to Missouri in the west, did not fully recover themselves till 1847, when the great demand for breadstuffs in Europe caused an influx of specie to the amount of upwards of twenty-four millions, and as less than two millions were exported, the balance in favor of the country was upwards of twenty-two millions. The banks in the Southern and South-western States did not fully recover till some years later, when a new demand sprung up for cotton.

According to the treasury tables, the number of banks and branches, the amount of capital paid in, and the amount of notes in circulation, was, at the commencement of each year of this period, as follows, excepting 1852 and 1853, for which no reports were made:

| No    | of Ban | ibe.    | Capital paid in | ,    | Circulation. |
|-------|--------|---------|-----------------|------|--------------|
| 1843, | 691    |         | \$228,000,000   |      | \$58,000,000 |

| 1851, |        |         | 227,000,000     |      | 155,000,000  |
| 1852, |        |         |                 |      |              |
| 1853, |        |         |                 |      |              |
| 1854, | 1208   | ••••    | 301,000,000     | •••• | 204,000,000  |
| 1855, |        | ••••    | 332,000,000     | •••• | 187,000,000  |

From this it appears that from 1843 to 1846 there was a gradual decrease of bank capital, and that though there was afterwards an increase, it was annually so small that the bank capital of 1851 was one million less than that of 1843. In all this time, however, there was an increase of circulation.

The most noted increase was in 1848, when the banks suddenly expanded their issues from 105 to 128 millions. This was the consequence of the prosperous trade of the previous year, 1847. In that year our exports of domestic produce were swelled to 150 millions, being 49 millions more than they were in the year preceding. Fortunately, the constitutional treasury system went into operation in 1847. But for the check it imposed, the amount of bank issues would have been greatly increased. As it was, the check it imposed was not strong enough. By a necessary reaction in the next year, the bank

currency was reduced in the amount of 14 millions, and the exports of specie exceeded the imports in upwards of nine millions.

In 1849, the first considerable deposit of gold from California was made at our mint. Since that time, the quantity of gold we have sent to foreign countries has greatly exceeded the amount we have received from them; but notwithstanding this, our own mines produce so abundantly that the amount of the precious metals in the country has gone on increasing continually, while the amount of paper money has,

as a general rule, increased also.

Between 1851 and 1855, a short period, there appears to have been an increase of four hundred and twenty-six in the number of banks, and of one hundred and five millions in the amount of their capital paid in. This is owing, mainly, to the widening of the specie basis, through the supplies of gold obtained from California and elsewhere, and to the action of the constitutional treasury system in retaining a large portion of that gold in the country, to the large sales of our produce in foreign countries, and to the improved state of our credit abroad, and to the spirit of speculation which has, in consequence, overspread the land.

Since California and Australia began to pour forth their riches, there have been ruinous fluctuations in the paper currencies of many of the States; but the only backward movement in the banking interest generally, was that which took place between January 1, 1854, and January 1, 1855, when the bank circulation was, in defiance of an increase of thirty-one millions in bank capital, reduced from two hundred and four millions to one hundred and eighty-seven millions. This was a natural reaction, the result of many banks having lent their circulating credit for a purpose to which their circulating credit is not adapted, namely, making railroads and other permanent improvements. The reaction was more sensibly felt, owing to the war in the East having caused capital to flow from Europe to Asia, instead of taking its natural course from Europe to America.

Such "squalls in the money market" as we had in 1854 are inseparable from a system which, as it rests on a confidence artificially created and artificially supported, is liable to be affected by every great change that takes place in the political or commercial world, if not by every wind that blows. But so long as the constitutional treasury system is faithfully administered, it may at least be hoped that we shall escape such awful tornadoes as occurred in previous

periods of our history.

If it should ever be the wish of the community to enjoy the advantages of the banking system without suffering from its disadvantages, the way to effect this object is a very plain one. It is simply to prohibit the issue of dollar notes, and then gradually those of higher denominations. With our own mines, and those of other countries, yielding the precious metals in as great quantities as they now do, this object could be readily accomplished, without interfering with the operations of regular commerce, or even with those of legitimate credit.

Gold and Silver coinage at the Mint of the United States in the several years from its establishment, in 1702, and including the coinage of the Branch Mints and the Assay Office, (New-York,) from their organization to September 30th, 1855.

F. Bigger, Register.

TREASURY DEPARTMENT, REGISTER'S OFFICE, October 24, 1855.

### GENERAL REMARKS.

To give a complete account of the changes that have taken place in our paper and specie mediums, would be to write a complete history of banking, finance, commerce, and manufactures in the United States, including views of the changes that have taken place in the political and commercial relations of the foreign countries with which we have intercourse, and of the variations in the supply of gold and silver from the mines.

Such a work would employ years, and fill volumes. Even if years of labor were bestowed on it, it would be impossible to state exactly the amount of gold and silver and of bank-paper in circulation at any one time in any one year. This is owing chiefly to the following reasons:

1st. No attempt has been made in any census to ascertain the amount of gold and silver in the country at any one period, either in the form of coin or that of manufactures, and if any such attempt should be made it would prove unsuccessful.

2d. Previous to 1820-21, no account was required at the custom-

houses of the amount of specie exported and imported.

3d. From prudential reasons many merchants, especially those of foreign origin, are disposed to conceal the amount of their transactions in bullion; and till very lately no effort was made to ascertain the amount of specie brought in by immigrants.

4th. Much silver has been brought in overland from the Mexican dominions. Of the amount we have no returns that can be depended

upon.

5th. The annual loss on coin in circulation by abrasion is matter of conjecture.

6th. The amount of the precious metals annually consumed in gilding and plating, and other branches of manufactures, is not known.

7th. The returns of the mint are no criteria of the amount of coin in circulation; because, for a long period, foreign coin constituted a large part of our metallic currency, and (owing to the free use made of paper money) the chief business of our mint and its branches has been that of fabricating coins for exportation.

8th. As the banks make their returns on different days, or different hours in the same day, the same pieces of gold and silver may figure successively in the accounts of different banks. In this way one mil-

lion may be made to appear as two millions, and five millions as ten or fifteen millions.

9th. Previous to the year 1834, no efforts were made by the United States government to collect and arrange, annually, the returns of the banks. In some years their returns have been very imperfect, the confusion that reigned among them being such that they apparently hardly knew how to make returns.

10th. The returns of the banks in the different States are made in different months, from January to December. Thus we have not the exact amount of paper circulation on any one day, in any one year.

The estimates of the amount of gold and silver in the country from 1845 to 1854, have been taken from one of the documents appended to the fiscal report of last year. They are formed by taking for granted—

1st. That the amount of gold and silver in the country in 1844 was one hundred millions, as computed in *Hunt's Merchants' Magazine*.

2d. That it increased or decreased annually, as the amount imported and received from our own mines exceeded or fell short of the amount exported.

3d. That the gold and silver brought in by immigrants and others, and not reported, and that brought in overland from Mexico, would balance the amounts clandestinely exported, and also the amount consumed in manufactures and the annual loss on coin by abrasion.

A rigid examination would probably show that the amount of specie in the vaults of the banks has been less, on the average, and that the amount in possession of the people has been more than is stated in the table; and also that the variations in our paper currency have been much greater than they would appear to have been from the bank returns and estimates.

### FINANCES OF GREAT BRITAIN.

The following is an Abstract of the Net Produce of the Revenue of the United Kingdom, in the under-mentioned periods, ended September 30, 1855, compared with the corresponding periods of the preceding year:

### BANKRUPTCY OF MESSRS. STRAHAN, PAUL & BATES.

From the London Times, December, 1855.

After all that has been said about the moral culpability of Messrs. Strahan, Paul & Bates, it may not now be unprofitable to inquire into the errors of judgment which placed the firm in circumstances of such temptation. It is sad enough to think that any individuals, but especially men who made the professions of these bankrupts, should for one moment be swayed from the right course; and every one hopes that he, in like circumstances, would not swerve from the path of rectitude. We hope not; but meanwhile, the sense of justice being so far appeased by the sentence passed upon these criminals, let us look at their position, not from the moral, but from the intellectual

<sup>\*</sup> And Victoria Branch. ‡ Including bonus.

<sup>†</sup> Includes amount in London Branch of the Bank. § On 2500,000.

point of view; not as a question of duty, but as a question of prudence. There is no history that so forcibly recalls to us two very stale proverbs, to the effect that no man becomes wicked all at once, and that the gods deprive of common-sense those whom they intend to ruin. Messrs. Strahan, Paul & Co. began their career of guilt in consummate folly, as they now end it in what to minds not hardened by guilt would be madness. We have not always the good fortune to agree with Mr. Thomas Carlyle, but we cannot help thinking that there is more truth than most people imagine in one of his sayings: "In our wide world there is but one altogether fatal personage—the dunce; he that speaks irrationally, that sees not, and yet thinks he sees." However unqualified is this statement, and however much it may horrify those who have a great admiration for well-meaning, steady-going dullards, it contains an immense amount of truth, and never has that truth been better illustrated than in the case before us. Messrs. Strahan, Paul & Bates are now convicts, because they acted like the dunce of Mr. Carlyle, in defiance of the most obvious principles of their business. Their balance-sheet, which has just been published, is too instructive to permit of our passing over it in silence.

It appears that so late as 1852 the firm was perfectly solvent. balance-sheet of December, 1851, indeed showed a deficiency of £65,542, or rather of £110,000, if we take into account the doubtfulness of certain assets; but against this deficiency we find that Strahan possessed unencumbered private property valued at more than £100,000; that Paul had £30,000, and Bates about £3000; in all, £133,000. At that date, therefore, they had a surplus of £23,000. At present the balance-sheet of the bank is as follows: Liabilities, £652,593; estimated assets, £127,670; deficiency, £524,923. Here is the bank ruined and more than half a million squandered in three years and a half. In examining the balance-sheet still further, it will be found that the sums involved in the transactions with Messrs. Gandell and Co., and Lord Mostyn amount to upwards of £483,000, or nearly half a million; so that the liabilities incurred through two customers of the bank almost cover the whole amount of the deficiency. The connection with the Messrs. Gandell commenced in 1852, when Messrs. Strahan & Co. were induced to advance them large sums of money to enable them to carry out certain contracts for the construction of French and Italian railways and for the drainage of Lake Capestang, the profit of the bank being 5 per cent interest on all moneys advanced,  $1\frac{1}{2}$  per cent commission on all payments made by them, and the payment of a bad debt of £1800. The advances, for which no tangible security was held, soon assumed gigantic dimensions, and Messrs. Gandell's affairs were found to be in such a condition that there seemed to the bankers no hope for them but in continuing and increasing their advances, so as to maintain the Gandells in a position to carry on the contracts which were to bring in, when completed, the golden harvest. Every nerve was strained, all the resources of the bank were tried, acceptances were given, and other heavy periodical liabilities were incurred. Drained to the uttermost, their resources failed. The whole property of the bank had been pledged, the private

estate of Strahan was likewise pledged; but all in vain, the money had disappeared. At last, to avoid or delay bankruptcy, their credit being taxed to the full and loans raised at all hazards, the bankers plundered their customers and sold or pledged their securities, till at length it appeared that their liabilities amounted to more than half a million, of which sum £393,000 were involved in transactions with the Messrs. Gandell alone. Besides this, the capital withdrawn from the bank in favor of Lord Mostyn amounted to £90,000, making in all

£483,000.

From these details it will be evident that Messrs. Strahan & Co. have achieved their own ruin by violating two of the most obvious principles of their business. The first of these is, that a great number of small customers is more advantageous than a very few large ones. It is not very difficult to understand why it should be so. There is less risk and greater expectation of profit in such an arrangement. Dependent on one or two large customers, not only does a bank run a tremendous risk in staking its existence on their good or bad fortune, but it deprives itself of all independence of action—becomes virtually the responsible partner of its customers; and, to sustain their position and avert their threatened loss, is compelled, even when it sees how unfavorable are the odds, to make ruinous advances. This is precisely how the Messrs. Strahan fared. They staked immensely on two concerns—Lord Mostyn's colliery, and the Messrs. Gandell's contracts. Here is error the first in the greater risk incurred and the less profit acquired with two than with a multitude of customers. But, moreover, they staked so largely that it seemed impossible to close the accounts and be content to lose a little—their existence depended on keeping open the account and bolstering the credit of the Gandells. They, in fact, ceased to be bankers simply; the greater part of their capital being embarked in the French and Italian railways, they had virtually merged their individuality in Gandell & Co. And this brings us to the other great principle which was violated. It is obviously necessary for a banker that money should always be within reach at short specified periods. Now, it is just possible, in very extraordinary cases, that with a couple of large customers the money advanced by the bank might be soon returned, and the rapidity of the transactions might, to some extent, compensate for the lower rate of interest and other disadvantages connected with very extensive dealings; but, as a general rule, the funds of the bank will be turned over far more rapidly by many than by few customers. Let that pass, however; it will be seen that the bankers not only lent out the enormous sums we have mentioned to two of their customers, but lent them in such a way that they were not readily recoverable. They were, in fact, sunk in speculations which, whether promising or otherwise, at least could not pay immediately. The connection of the Messrs. Strahan with the Mostyn colliery seems to have commenced in 1848. This colliery had just been brought into a productive condition, yielding, however, barely enough to cover expenses. money was, therefore, sunk for years; and the advances to the Gandells were not better managed. Bad enough to incur liabilities in this

way, amounting at the date of the bankruptcy to £393,000; but these sums were embarked in undertakings which could not immediately remunerate—contracts for railways which it would take years to complete, years more to make profitable concerns. Conceive such utter recklessness! If in yielding to temptation the bankers displayed a lamentable want of principle, it is plain that in falling into temptation they displayed an astounding want of judgment. Depend upon it that, all the world over, however we may distinguish between knaves and fools, the distinction is naught, and both are one.

### IMPORTS AND EXPORTS OF THE UNITED STATES.

Wheat in England.—Among the recent files of English papers are some interesting statistics relative to the agriculture of England and France, from which it appears that in England, out of 50,000,000 acres cultivated, 10,000,000 are sown with wheat or other cereals; while in France 50,000,000 are cultivated for the latter purpose. The average growth of wheat per acre in England is four quarters or thirty-two bushels; in France one and three fifths, or nearly thirteen bushels. The produce of English land is about £3 4s.; that of France about £1 12s per acre. The number of sheep is about the same in both countries, namely, 35,000,000, and the wool produced about 60,000 tons; but, owing to the difference in the average, there is something less than one and a half sheep per acre in England, and only about one third of a sheep per acre in France. In France 4,000,000 of cattle are slaughtered annually, the average weight being 250 pounds; in England there is not half that number slaughtered, but their average weight is about 600 pounds.

### CORRESPONDENCE OF THE BANKERS' MAGAZINE.

BALTIMORE, Nov. 12th, 1855.

To the Editor Bankers' Magazine, New-York;

DEAR SIR: The writer having had several discussions on the subject of the propriety of giving parties the title of Mr. or Messrs. in indorsing drafts and notes over to order, would be much pleased to have your opinion on the subject.

There seems to be no general usage on this point, some parties indorsing bills over to Mr. John Smith, and others to John Smith.

The writer is of opinion that titles on the back of bills of exchange or notes, are superfluous and unmercantile; but not wishing to appear uncourteous or out of order, would be glad to have higher authority on the subject.

C. H.

REMARKS.—The use or omission of such words as Mr. and Messrs. by bankers, we consider as mere matters of form, and dictated merely by the taste of the writer. To use them, or either of them, conveys no additional value or importance; and their omission would detract nothing whatever from the paper. Such is the usual hurry among bankers in the transaction of their ordinary business, especially their correspondence and the dispatch of collection paper, that convenience would dictate the omission of all superfluous words; and to facilitate business, many find it economy of time to cause the following words to be printed on the back of all out-of-town paper, by a clerk in the bank:

Any one who has occasion to send off one hundred or more letters daily, is compelled to adopt the most brief phraseology, and to use the printing art in all available ways and means.

We therefore agree with our correspondent, that the use of the titles Mr. or Messrs., (and even Esq.,) is quite superfluous, and should be dispensed with.

ED. B. M.

### II .- FORGED INDORSEMENTS.

A gives his certificate of deposit payable to the order of B, which is indorsed by B to the order of C, stolen from the mail and the indorsement of C forged to an order making the certificate payable to D, by D indorsed to E, and paid to E by A. After payment, the forgery of C's indorsement is discovered. Can D or E be held responsible, or must A bear the loss?

A Subscriber.

This is a question somewhat intricate, and its solution might depend upon circumstances that would be different in different cases. In general terms, in the case stated, we would consider D as liable to A, and that the latter could recover from either D or E. In all cases of the kind, however, due caution should be observed by bankers in their negotiations, and timely notice given of any fraud. We have noticed several frauds of a late date, upon bankers who have dealt with strangers. The desire to make a good operation sometimes leads a banker off the track of a safe policy. Our "Subscriber" will find the law relating to forgeries so clearly laid down in our report of the case of the "Ohio Life & Trust Company vs. Ellis and Sturges," (September, 1854,) that its points should be strongly impressed upon his mind, and upon that of every person who deals in negotiable paper. The fact that a banker is liable, under peculiar circumstances, for fraudulent checks and bills paid by him, and that he cannot, under some circumstances, recover from an honest party to whom the money has been paid, is now well established by the English and ED. B. M. American Law.

N.B.—All Stocks not specified as Bonds are transferable by inscription. All Bonds (except Hudson 1st and 2d Mortgage and Eric Convertibles) are payable to bearer. Denotes Ex-Int. or Ex-Dividend.

### FOREIGN ITEMS.

FRANCE.—Of the new financial measures of the French government the Patric

(semi-official) says:

"Certain correspondents of foreign journals have thought fit to give currency to rumors relative to financial measures, which, it is pretended, the French Government is on the eve of taking. They talk of new taxes upon tobacco, salt, etc. We have made it a point to ascertain what foundation, if any, there may be for these reports, and it results, from the positive information which we have obtained, that they are wholly untrue. Malevolence alone can for the future accept and propagate stories which have all the characteristics of false news."

The Presse says in its weekly commercial review: "The fears which have been entertained of the results of the measures taken by the Bank of France within the last two months are gradually disappearing. Trade is far from active, but so much caution has been exercised that the aggregate of bills payable at the end of Decem-

ber will not be formidable."

India Cotton.—The produce of cotton appears to be rapidly increasing in India. The ship Com. Perry has lately arrived at Liverpool with the largest cargo (2770 tons) ever shipped at Bombay for England. It included 8321 bales of cotton, 1076 bales of wool, 396 bales of hemp, 3771 bags of seed, and above 2000 bales and bags of various articles used in tanning, dyeing, etc.; also, 500 bags of salt-petre.

### BANK ITEMS.

NEW-YORK.—C. A. Macy, Esq., President of the New-York County Bank, has been elected Cashier of the new Park Bank, which will commence operations shortly with a cash capital of two millions of dollars. Reuben W. Howes, Esq., President. The Bank has purchased, for its banking purposes, the property now known as the Clinton Hotel, Beekman street, adjoining the Nassau Bank—prospectively an admirable location.

Chittenango.—Damon Wells, Esq., has been elected President of the Chittenango Bank, in place of George Crouse, Esq., resigned.

Albany.—John H. Van Antwerp, Esq., was elected Cashier of the New-York State Bank, Albany, December 31st, 1855, in place of Josiah B. Plumb, Esq., who is now Vice-President. The Bank of the Capitol has decided to increase its capital from \$350,000 to \$525,000.

Troy.—Francis Sims, Esq., recently Teller, has been selected as Cashier of the Merchants & Mechanics' Bank, Troy, in place of Tracy Taylor, Esq., who has become Cashier of the Bank of Troy.

Auburn.—The Exchange Bank of Auburn is about going into operation. Its capital is \$125,000. Thomas Graves, President; Wm. B. Beardsley, Cashier.

Norwich.—The charter of the Bank of Chenango having expired, a new institution under the same name has been established, with Walter M. Conkey, President; B. F. Rexford, Vice-President; Wm. B. Pellett, Cashier; and John R. Conkey, Teller.

MASSACHUSETTS.—A new Board of Directors of the Grocers' Bank was chosen on the 5th of January. Samuel G. Reed, Esq., was made President, and Charles H. Tyler, Esq., Cashier.

Abolition of Small Bills.—A petition for the abolition of bills under five dollars was presented in the House of Representatives of Massachusetts, on the 22d Janu-

ary, signed by A. & A. Lawrence & Co., J. W. Paige & Co., Charles H. Mills & Co., Mason & Lawrence, J. M. Beebe, Richardson & Co., F. Skinner & Co., Upham, Tucker & Co., Converse, Harding & Co., Gardner, Brewer & Co., Waterston, Dean & Co., Tucker, Newton & Mills, Parker, Wilder & Co., and J. A. Lowell. The signers of this are all business men of Boston, though some may reside in other counties. They comprise the largest houses interested in the manufacture and sale of domestic goods in New-England. The list could be made to comprise nearly all the leading houses; all of which favor the credit system, and to a great extent rely upon it. Nearly all are directors of banks; they have no personal interest, any more than any citizen has, in retaining more gold and silver.

Dorchester.—Charles Carruth, Esq., has been chosen President of the Mattapan Bank, Dorchester, in place of Edward King, Esq., resigned.

RHODE-ISLAND.—A petition has been presented for a new bank in Washington county. The petition of course goes over until the next session, when we hope it will be rejected, with all others that may be applied for. The opinion prevailing among all the bankers and sound business men of the State is, that the number of banking institutions is already too large, and that a further increase would be far from promotive of the public good.—Providence Journal.

VERMONT.—The charter of the Bank of Rutland has been extended to the year 1877; and the capital increased from \$150,000 to \$300,000.

NEW-JERSEY.—Of the bank movement in New-Jersey, the Trenton State Gazette says: "Opportunity has not yet been given to ascertain the feeling of the Legislature in regard to the creation of more banks. We should judge, however, that there is quite a strong determination against granting all the applications which have been published; but whether a discrimination will be made in favor of such banks as appear to be needed, or not, we cannot yet undertake to say. It is reported that an alteration will be made in the rules of the House, forbidding hereafter the re-consideration and passage of a bank bill, over a veto, except by the constitutional majority (36) required to pass it in the first place. Last session some bills were passed the second time by 31 votes. Different constructions are given to the constitutional provision on this subject, and if the House adopts a rule in the matter, we should suppose the question might be referred to the Supreme Court for adjudication.

Burlington.—Robert B. Aertsen, Esq., late Curator of St. Mary's Hall and Burlington College, has been elected Cashier of the Burlington Bank, to fill the vacancy caused by the death of Mr. Geo. Gaskill.

SOUTH-CAROLINA.—From the present statement it will appear that the entire circulation of the banks amounts to \$8,609,581; deposits, \$3,387,240; specie, \$1,336,105; notes discounted on personal security, \$11,308,513; loans secured by pledge of their own stock, \$625,643; loans secured by pledge of other stock, \$1,199,883; domestic exchange, \$10,300,806; foreign, \$436,453; and that besides these, the stock of the several banks is invested in bonds to the extent of \$1,304,-846; stocks, \$1,906,240; suspended debt, \$1,860,465; real estate, \$609,070—making of specie, and exchange and loans on other securities, \$25,207,383; and of permanent investments not immediately available, \$5,680,621. The entire nominal banking capital of the State amounts to \$14,756,814, though in addition to the sum of \$1,113,789, stated to be the capital of the Bank of the State, the institution is charged with the sinking fund of the State, amounting to \$1,511,672, and the fire loan, \$1,667,617—together making the further sum of \$2,979,289—which, being the basis for banking operations, may be said to increase the real capital of the State to \$16,756,103, which is less by but little more than \$1,000,000 than the banking capital of Pennsylvania, and greater than the capital of any other State in the Union except Pennsylvania and New-York.—Charleston Standard.

OHIO.—Thomas F. McGrew, Esq., has been appointed Cashier of the Mad River Valley Branch of the State Bank of Ohio, at Springfield, in place of James T. Claypoole, Esq., resigned.

TENNESSEE.—Messrs. Dyer Pearl and Co. have established and are putting in operation at Nashville, under the Free Banking Law of Tennessee, a Bank by the name of the City Bank, with a nominal capital of \$500,000, the extent to which any free bank under the law can go—of which Dyer Pearl is President, and E. G. Pearl Cashier. As a basis for commencement, \$50,000 State Bonds have been deposited with the Comptroller.

Boston Clearing-House.—The constitution and laws for the Clearing-House were read at a meeting of bank officers at the Merchants' Bank, January 15th, and were adopted and signed. Franklin Haven was chosen Chairman; William Thomas, of the Webster Bank, Secretary; and a standing committee, namely, Andrew T. Hall, Tremont Bank, Waldo Flint, Eagle Bank, Thomas Lamb, New-England Bank, A. D. Hodges, Washington Bank, Benj. E. Bates, Bank of Commerce. The Clearing-House will go into active operation as soon as the rooms over the Bank of North-America are in readiness. The objects of this institution, as set forth in the constitution recently adopted by the Association are as follows:

"The effecting at one time and place the daily exchanges between the several Associated Banks, and the payment at the same place of the balances resulting from such exchanges; the Association not to be responsible for balances except when actually paid to the Manager; the responsibility of the Clearing-House being strictly limited to the faithful distribution by the Manager of the sums actually received by him among the creditor banks, any loss occurring while the balances are in the hands of the Manager, to be paid proportionally by the Associated Banks. Each bank is to have one vote; the Association is to elect a Chairman and Secretary at the annual meeting, on the second Monday in April, and also a Standing Committee of five Presidents or other Directors of Banks, (no bank to have more than one,) of the Association, to be called the "Clearing-House Committee," whose duty it is to appoint a Manager and other officers, and to supervise, generally the whole business and affairs of the Clearing-House, and have charge of the funds of the Association. The Manager to give bonds in \$10,000, and the clerks and porters in the sum of \$5000 each. The hour for making the exchanges at the Clearing-House is the hour of the opening of the banks. At 12 o'clock the debtor banks pay balances due to the Manager at the Clearing-House, either in coin or certain specified certificates, and, when less than \$500, in bills of the debtor bank. At half-past twelve the creditor banks are to have their balances paid to them; in case a debtor bank fails to pay at the proper hour, the amount, on requisition of the Manager, is to be furnished to the Clearing-House by the several banks in proportion to their balance against the defaulting bank, the amount so furnished to constitute a claim on the part of the responding banks against the defaulting bank; errors in exchanges and claims arising from the returns of checks or other causes are to be adjusted directly between the banks that are parties therein; reclamations for errors in bags or packages are to be made to the banks whose marks they bear, such reclamation to be made in a reasonable time.

"When thought expedient, a depository of coin is to be established, one of the Association being appointed keeper of any coin which the Associated Banks shall send to it, and the depository bank shall issue certificates which shall be received in payment of balances at the Clearing-House, and shall be negotiable only among the banks of the Association; this coin to be withdrawn by the owners at any time during banking hours; any bank can become a member at any time before the Clearing-House goes into operation, but after that time only by a recommendation of the Clearing-House Committee, the affirmative vote of three fourths of the members present at a meeting of the Association, and the payment of an admissionfee of \$250; for cause deemed sufficient, any bank can be expelled by a majority of all the associated banks; the Clearing-House Committee can suspend, in case of urgent necessity, any bank from the privileges of the Association until the pleasure of the Association is known, provided such shall be the unanimous opinion of all the members of the Committee, in case of which they shall forthwith call a meeting of the Association; any member may withdraw by giving three months' notice in writing; each bank is to pay annually \$125, and the rest of the expenses are to be assessed equally upon the capital of the Associated Banks, no bank to be assessed upon a capital exceeding three million dollars; the Suffolk Bank, if it comes

in, to be assessed upon the largest amount on account of its peculiar business and large exchanges; any bank whose settlements are made through another bank to pay such sum annually as may be determined by the Clearing-House Committee; the Clearing-House to go into operation as soon as the articles shall have received the assent of twenty banks."

WISCONSIN.—The Governor of Wisconsin gives in his message the annexed statement relative to the banks of that State:

"It appears that the whole number of banks in operation on the first day of January was thirty-two, with an aggregate capital of \$1,983,000. The number in process of closing was four. The securities deposited for the redemption of circulating notes are as follows, namely: Stocks, \$1,215,000; specie, \$28,898.75—making total amount of securities, aside from individual bonds, \$1,243,898.75. Total amount of circulating notes outstanding on January 1, was \$1,153,534, of which \$477,063 was issued in the year 1855, and during which time the sum of \$261,121 was returned for cancellation. The amount of State tax due and collected from banks during the same period was \$23,970.83. Those which have closed business, it is gratifying to state, have ample means deposited with the Comptroller to redeem their notes at par on presentation, clearly indicating that the law under which they were established was well devised."

Milwaukee.—The Marine Bank at Milwaukee has commenced business, under the general banking law, having deposited the State stock securities for circulation.

J. A. Hoover, Esq., President; J. H. Skidmore, Esq., Cashier.

INDIANA.—The following-named banks having failed to comply with the law of Indiana, regulating general banking, the Auditor gives notice that he will sell at public auction, at the Merchants' Exchange in the city of New-York, on Tuesday, the 29th day of January next, the securities held in trust for redemption of the circulating notes of said banks, namely: 1. Northern Indiana Bank, at Logansport, consisting of Indiana five per cent stocks.

2. Bank of Covington, at Covington, consisting of Louisiana six per cent stocks.

3. State Stock Bank, at Marion, consisting of Louisiana and Virginia six per cent stocks.

### BANK DIVIDENDS FOR JANUARY.

There has been more activity in bank shares during the month of January, and prices are well sustained. The dividends declared during the month, show a profitable business among all these institutions.

### Notes on the Money Market.

NEW-YORK, JANUARY 28, 1856.

Exchange on London, at Sixty Days' Sight, 8 a 81 Premium.

A PAVORABLE change has occurred in the Wall-street market since our last monthly report. A large amount of funds were distributed between the 1st and 20th of January, variously estimated at six to ten millions of dollars, in the shape of dividends on bank and railroad and insurance company shares, and semi-annual interest on State, City, County and railroad loans. During the month there has been abundance of capital on call, at 7 a 8 per cent; but on business paper the rates are still exorbitantly high. First-class paper at 60 days to four months sells at 12 per cent, and what may be termed good paper commands 15 per cent. There is an obvious disinclination to invest in long paper or in public securities, even at the present profitable rates. There is a sensitiveness among monled men, as to the results of the present war, which shows that our money market is far from being independent of foreign influences.

There is still ample room for a further rise in stock values, and we think prices will become better towards the end of February. Notwithstanding the reported difficulties in the foreign money markets, there is a steady flow of British and Continental capital to this country for investment in the leading securities of our market. Many of these, of a solid character, now yield 8 to 12 per cent. For Reading shares alone, already held largely in England, the orders within the past two weeks have been liberal, and the new features of the Company now made public, will gradually operate upon foreign holders to induce them to invest further. A dividend of ten per cent will probably be made on the shares in July next, leaving a handsome balance for the sinking fund of the Company.

The banks have increased their specie balances from \$11,220,000, early in December, to \$18,000,000 at this date. They are also enabled to extend their loans from \$92,500,000 to \$96,500,000. The following are the leading items since the first week in September last.

| Da    | ta.  | Loans.      |       | Specie.      |      | Circulation. |       | Deposiis.    | Æ           | iub-Treas-<br>ury. |
|-------|------|-------------|-------|--------------|------|--------------|-------|--------------|-------------|--------------------|

The increase in the coin held by the banks is larger than was anticipsted. The aggregate is about equal to that of August last, when the loans of the banks exceeded one hundred millions of dollars. The circulation continues to decline, as the bills of the New-England and New-York country banks now form more than two thirds of the active paper currency of our city. Such has been the pressing demand for discounts for some months past, among manufacturers and others in this city, that large loans from the Rhode-Island and Connecticut banks have been made in their small bills for distribution here among mechanics.

At Boston the banks are well fortified with specie, but the loans are less than six or eight months ago. The following is a summary of their leading items since October:

| Date.    | Loans.              |   | Specie.    |             | Deposits.    | C           | irculation. |

The stock market is still unfavorably affected by the political speculations at Washington, and prices yet rule very low. The improving features of the money market must, however, have a favorable influence upon quotations for the next few weeks. The accumulations of gold in the Atlantic cities, and the increasing deposits, indicate greater strength on the part of the banks and of their customers. We already see a condition of affairs approaching, which was anticipated at the opening of the new year, namely: advanced prices for stocks and a reduction in the rates on loans. There is no export demand for coin, and as the supplies are regularly about \$4,000,000 per month from California, a substantial and steady improvement in our financial and commercial circles must supersede the depression of the past month.

It would not be surprising if the coming year exhibited features somewhat analogous to those of 1847-8, namely, a heavier export of breadstuffs from this country to Europe, and a drain upon the western powers for gold. This latter has been going on steadily for months, and may result in a further advance of the rate of discount by the Bank of England.

Bankers are availing themselves of the new loan of the State of New-York 5 per cent stock, issued on the 18th ult., and due Jan. 1, 1874, as a basis for banking purposes. Out of \$1,700,000, secured by Mr. Rufus H. King, of Albany, over \$1,600,000 have been deposited by him in the Bank Department in trust for banks and bankers who have purchased of him since the award; and Mr. King has withdrawn from thence, in payment, upward of \$1,100,000 of the New-York State 5 per cent stock, maturing 1st January next, and some \$200,000 Government securities of various kinds. The New-York State Stocks, about due, will be redeemed at the Manhattan Company's Bank, this city.

The Reciprocity Treaty with Canada operates favorably both for the United States and for the Provinces, but more especially for the former. In a letter from John Young, Esq., to the Chief Commissioner of the Canadian Public Works, it is stated that the trade of Canada is tending towards the United States, and to American channels to market, instead of seeking an outlet through the St. Lawrence to the ocean. The amount of Canadian trade has been greatly increased by the Reciprocity Treaty, but it takes a direction towards New-York and Boston, and benefits the Erie Canal and the railroads in the United States.

The exportation of cereals from Canada into the United States had before been very trifling in amount, but it increased, in 1854, to an amount equal to 769,575 barrels of flour. The total value of imports into Canada from the United States was increased from \$5,724,806 in 1849, to \$17,800,780 in 1854. The Reciprocity Treaty has, according to Mr. Young, inured to the advantage of trade with the United States; while the St. Lawrence has failed to attract any American vessels on the upper lakes through that river to the ocean.

Our latest dates from London are to the 12th inst., when the Bank of England rate of interest remained at six per cent.

From Paris our papers report a favorable change had taken place on the day before the departure of the "Africa." Stocks were recovering from the late depression, and on the 8th inst. were firm. Credit Mobilier shares, after having declined fifty francs, were quoted 12.55 at the close, (against a par value of 500 franca.) Business, all over the Continent, remained stagnant. At Havre, arrivals of American breadstuffs had caused a decline of prices; and in Belgium, Holland, and Germany, prices were also lower. The transactions in American produce, including cotton, were confined to the immediate wants for consumption. Speculation was at a stand.

The following exhibits the continued decline of coin and bullion in the Bank of England, and the amount of loans and discounts, and notes in reserve, since the first week in November:

|          | Loans and<br>Discounts, | Bank Notes<br>Unemployed. | Coin and<br>Bullion. |
|----------|-------------------------|---------------------------|----------------------|
| Nov. 8,  | £18,855,548             | <br>£4,644,465            | <br>£11,299,684      |
| Nov. 10, |                         | <br>4,883,205             | <br>11,204,438       |
| Nov. 17, | 17,787,150              | <br>5,239,530             | <br>11,263,224       |

| Dec. 1,  |                         | <br>5,505,485             | <br>11,227,107       |
| Dec. 8   | • •                     | <br>5,759,185             | <br>11,079,579       |
| Dec. 15  |                         | <br>6,556,625             | <br>11,806,889       |
| Dec. 22, |                         | <br>6,464,705             | <br>10,981,745       |
| Dec. 29, |                         | <br>5,968,850             | <br>10,820,118       |
| Jan. 8   | •                       | <br>5,520,875             | <br>10,586,909       |

The following are the changes in Consols:

| Nov. 80, | 914 ] | Dec. | 21,881/ | Jan. | 4,87%      |
|----------|-------|------|---------|------|------------|
| Dec. 7,  | MX ]  | Dec. | 28,883/ | Jan. | 11,86¥a86¾ |
| Dec. 14, |       |      |         |      |            |

It is extraordinary, however, that after the enormous expenditures of the past eighteen months by the British Government, Consols are so well sustained, and are even higher than the lowest quotations of March, 1854, before active operations were commenced against Russia. In that month, consols suddenly fell to 85% merely from the expectation of a serious war; but now, after the lapse of twenty-two months, they range from 86% to 86%.

The present expectations of peace are not entirely destroyed. The Times of the 10th says:

"In well-informed quarters, however, it is believed that the communication stated to have been already sent from St. Petersburg to Vienna is not intended as an answer to the propositions offered, but contains counter-propositions, the fate of which the Russian Court are anxious to ascertain before the expiration of the time allotted for a final reply. Pending these discussions, there would of course be a disposition to create an idea that, if concessions are not made, the terms will be rejected. In the discount market to-day, a better supply of money was temporarily created by the payment of the dividends. In the Stock Exchange, the rate on short loans is 5 per cent, and till the 7th of February, 5% per cent. Bank stock closed at 206a209."

The London Morning Post states that the cause of the fall of consols may be ascribed, in a great measure, to the advices from Paris, which allude to the probability of another loan being shortly required for the service of the French Government, and the somewhat lower quotations obtained in the first instance for French Securities at the Bourse. The banks will now be immediately, if not so already, in the receipt of their dividend-warrants for the January dividends, payable at the Bank of England, which must have a beneficial influence on the money market; besides which, there will, in the course of the week, be numerous recipients seeking investment for the employment of moneys falling into their hands. The fears of a return of American securities are, at present needless. It is well known to our capitalists here, that the increased intercourse between this city and the continental towns of Europe, has created fresh inquiries for substantial shares and bonds, and that there is at this moment as much confidence felt in Europe as ever, in the permanent values of these securities. Formerly these were held in large sums by prominent capitalists, now they are more diffused over a wide surface, and are held for long investments by persons with moderate means.

### DEATH.

AT JACKSONVILLE, Florida, Wednesday, January 9th, George Curtis, Esq., President of the Continental Bank, New-York.

Mr. Curtis was a native of Massachusetts, but resided for many years in Providence, R. I., from whence he came in 1839 to New-York, as Cashier of the Bank of Commerce. He a few weeks since exchanged the rigors of a Northern latitude for a milder climate, but without the beneficial effect which was hoped for rather than expected. The intelligence, which confirmed their worst apprehensions, pierced with a sharp arrow the hearts with which his own was linked, and carried sympathizing sadness into the most cultivated and refined social circles of our great metropolis.

Mr. Curtis combined the discipline of the Banker with the acquirements of the Scholar. His mind was stored with various and exact knowledge. His tastes were pure—his associations elevating. There was a conscientiousness in his sentiments, a toleration in his opinions, and a charity in his constructions, which carried him through life without collision or conflict with its evils or its infirmities. Though, during business hours, wholly absorbed with things that pertain to the "almighty dollar," the moment his bank closed, "fancy free," he became as intellectual and as genial as Charles Lamb or Samuel Rogers. And there was a charm in his conversation which, though

"His tongue is now a stringless instrument,"

will live in the memories of all who enjoyed his society and friendship.

No. IX.

### THE DEBTS AND ARMIES OF EUROPE.

I. The Public Debts of European States. II. Their Annual Revenue. III. Their Military Strength in times of Peace and in War. IV. Area and Population.

The present war between Russia and the Western Allies, has been productive of vast expenditures to all the parties concerned, as well as of a great loss of human life. Nothing, so far, apparently, has been gained by either side, in reference to the original points of dispute. Great Britain, France, Russia, and Turkey, have each added to their governmental debts, previously enormously large; and ages will ensue before the recent accumulations can be liquidated. The accumulations of the past year are known only in part. There is, of course, a large floating debt; and if peace were established at this moment, it would still be some years before the total war bills could be fully ascertained and audited. To pay off a portion of the floating or accruing indebtedness, the following loans were negotiated last year:

January—French loan of 500,000,000 francs. April—English loan, £16,000,000 sterling.

July—French loan of 750,000,000 francs, equivalent to nearly £30,000,000 sterling.

July—The Turkish loan of £5,000,000, guaranteed by England and France.

A remarkable feature attending the negotiation of the French loan,

\_\_\_

was its great popularity among the masses of the people—capitalists large and small. The returns relative to the subscription for the French loan of 750,000,000 francs, give a total capital subscribed of 3,652,591,985 francs, or nearly five times the amount required by the government. The total number of subscribers was 316,864, of whom 236,577 in the departments subscribed for 1,118,703,535 francs. The remaining 2,533,888,450 francs, subscribed in Paris, included about 600,000,000 francs subscribed for in foreign countries. No less than 231,920,155 francs were made up of subscriptions of 50 francs and under. A tenth of the subscription, (365,259,198 francs,) deposited in the hands of government, was temporarily withdrawn from the circulation of France.

In order to present the financial position of European governments, we extract from the new volume of the *Encyclopædia Britannica*, (article "Europe,") the following summary of the debt and revenue of each, to which is added the effective military power of each (as to number of men) in time of peace and war:

|                            | Debt.              | Annual Revenue,  | Peace.         | War.        |
|----------------------------|--------------------|------------------|----------------|-------------|
| Great Britain & Ireland, £ | 760,000,00         | £56,000,000      | 128,000        |             |
| France,                    | 275,000,000        | 62,000,000       |                | 581,000     |

This statement, as it regards the debts of Russia and the Allies, will be enlarged by certain new obligations created within the year 1855. Of this large debt, the writer in the *Encyclopædia Britannica* remarks:

"In financial importance, Britain stands at the head of all these states; for not only is her annual revenue the largest, excepting that of France, but she enjoys besides the unenviable preminence of being burdened with the largest debt. The bad practice of anticipating revenue by borrowing money, is common to all; and as will be seen

in the table, only some of the less important have escaped the evergrowing evil. Within the last twenty years, the debt of Austria has increased more than three-fold; and now the French Emperor is borrowing largely to pay the current expenses of the war in which he and the British Government are engaged with Russia.

"The governments of Spain and Greece are virtually bankrupts, being neither able nor willing to pay either principal or interest of their large debts. Norway, on the contrary, the poorest country in Europe, has set the bright example of paying off that portion of the Danish debt with which she was burdened when separated from that monarchy in 1814, while the Danish portion has gone on increasing. The Ottoman Sultan has only escaped by virtue of his want of credit.

"Their annual revenues, and the amount of their debts, are stated in the above table, in the nearest round numbers, and in sterling money, which will give a sufficiently near approximation to sums that are constantly varying, and in many instances not certainly known."

Of the tabular view of the military force of each nation, the writer

in the Encyclopædia remarks as follows:

"Though there has been a general peace in Europe for the long period of forty years, until the year 1854, yet their mutual jealousies have made it seem necessary, to the continental governments at least, to maintain large standing armies. Russia, safe from foreign invasion, has long been preparing large armaments for purposes of aggression on her weaker neighbors, and of domination over all the rest; and at last her overt acts of aggression on Turkey have provoked a war with England and France, who have armed in defence of their ancient ally the Sultan, and with the view of not only maintaining the balance of power in Europe, but of effectually checking the undisguised attempts of the Czars of Russia at universal dominion. In these circumstances, with all Europe arming, or beginning to arm, any numerical statements of their military forces, however approximately correct when written, may have become quite erroneous by the time they are published. The preceding table, therefore, contains only the declared numbers respectively of the peace and war establishments of the continental armies, with the exception of that of France, which gives the actual number of men on foot, as stated in the Emperor's address to his Legislative Council in December, 1854.

"The maritime powers that maintain efficient navies worth notice, are Britain, France, Russia, Austria, Turkey, Sardinia, Netherlands, Denmark, Sweden, and Norway. In December, 1854, the British fleet, in commission and actual service, consisted of 142 steamers and 104 sailing ships, with 63,000 men; that of France, of nearly the same number of vessels altogether, though not so many steamers, with 60,000 men. The Russian fleet, in the spring of 1854, consisted of 52 line-of-battle-ships, 48 frigates, and 84 smaller vessels, (besides gun-boats,) with 9000 guns and 62,000 men; Austria possessed 104 vessels carrying 742 guns; Turkey, 70 vessels, with 34,000 seamen and 4000 marines; Sardinia, 19 vessels, with 359 guns; the Netherlands, 88 vessels, with 2000 guns and 6180 men; Denmark, 120 ves-

sels, with 883 guns, and 2000 men; Sweden, 74 vessels, besides gunboats; Norway, 19 ships, besides gunboats, with 500 men.

"In Europe there are two great national confederacies, the Germanic and the Swiss, but in neither of them is there so close a union of the sovereignties that compose it, as there is in the United States of North-America. In Germany, indeed, there is no principle or feeling of unity among either princes or people, and their confederation, as such, enjoys neither influence nor respect at home or abroad. In Switzerland, on the contrary, recent circumstances seem to have produced a closer and more intimate union, and given to the Federative Assembly the authority indispensable to the efficient working of a central government.

Considered in respect of political constitution and civil government, the states of Europe may be arranged in six classes. The first class comprises 4 empires, the sovereigns of which are absolute monarchs; the second, 16 kingdoms, partly absolute and partly constitutional; the fourth, 7 grand-duchies, all monarchies; the fifth, 24 duchies and principalities, likewise all monarchies, partly constitutional and partly absolute; and the sixth, 32 republics. The third class comprises 2 non-descripts, both monarchies indeed; but, in the one case, the sovereign retains the subject title of Elector of the head of an empire that no longer exists, and the sovereign of the other is at once the spiritual sovereign of the Roman Catholic world, and the temporal sovereign of that portion of Italy called the States of the Church. The following table contains the names, territorial extent or area, and the population of these several states at the dates attached to them respectively. The grand total of the population, as it is not all of the same year, can

only be considered as an approximation to the truth.

The principality of *Monaco*, though nominally an independent sovereignty, is practically under the domination of Sardinis.

### RAILROADS IN GREAT BRITAIN.

Proceedings of the Institution of Civil Engineers.—London, January, 1856.

MR. R. STEPHENSON, M. P., the President of the Institution of Civil Engineers, on taking the chair for the first time since his election, handed in an address, which was read by the Secretary.

After a complimentary allusion to the addresses of his predecessors, the President observed that he would apply himself to the great question of British railways, which were described as spreading, like a network, over Great Britain and Ireland to the extent of 8054 miles completed; thus in length they exceeded the ten chief rivers of Europe united, and more than enough of single rails was laid to make a belt of iron around the globe.

The cost of these lines had been £286,000,000, equal to one third of the amount of the national debt. Already, in two short years, there had been spent more than one fourth of £286,000,000 in the war in which England was engaged; yet how small were the material advantages obtained by the war in comparison with the results secured by railways

The extent of the railway works was remarkable; they had penetrated the earth with tunnels to the extent of more than 50 miles; there were 11 miles of viaduct in the vicinity of the metropolis alone. The earth-works measured 550,000,000 cubic yards. St. Paul's, in comparison with the mountain this earth would rear, would be but as a pigmy beside a giant, for it would form a pyramid a mile and a half in height, with a base larger than St. James's Park.

Eighty millions of train miles were run annually on the railways; 5000 engines and 150,000 vehicles composed the working stock; the engines, in a straight line, would extend from London to Chatham; the vehicles, from London to Aberdeen; and the companies employed

90,400 officers and servants, while the engines consumed annually 2,000,000 tons of coals; so that in every minute of time 4 tons of coal flashed into steam 20 tons of water—an amount sufficient for the supply of the domestic and other wants of the town of Liverpool. The coal consumed was almost equal to the whole amount exported to foreign countries, and to one half of the annual consumption of London.

In 1854, 111,000,000 of passengers were conveyed on railways; each passenger travelling an average of 12 miles. The old coaches carried an average of 10 passengers, and for the conveyance of 300,000 passengers a day, 12 miles each, there would have been required at least 10,000 coaches and 120,000 horses.

The receipts of the railways in 1854 amounted to £20,215,000, and there was no instance on record in which the receipts of a railway had not been of continuous growth, even where portions of its traffic had

been abstracted by competition or new lines.

The wear and tear was great; 20,000 tons of iron required to be replaced annually; and 26,000,000 sleepers annually perished; 300,000 trees were annually felled to make good the loss of sleepers; and 300,000 trees could be grown on little less than 5000 acres of forestland. The President considered at some length how these annual depreciations should be met. The principle of a renewal fund was questionable. After a certain period in the history of every railway, deterioration reached an annual average, and as that annual depreciation became a charge as fixed and certain as the cost of fuel or the salaries of officers, it should be admitted as an annual charge against receipts.

As regarded fares, the interests of the companies and of the public were identical; companies must regulate fares by consideration of the circumstances which produced the largest revenue, and the circumstances which produced the largest revenue were those which induced the greatest number of individuals to travel. Nothing was so profitable as passenger traffic, as it cost less in every way than goods, and an average train would carry 200 passengers. The cost of running a train was over-stated at 1s. 3d. per mile, and 100 passengers at five eighths of 1d. per mile produced 5s.  $2\frac{1}{2}d$ . But this argument did not imply that in all cases fares should be fixed at a minimum. Minimum fares were most profitable on short routes; but the public were too much occupied to be tempted by minimum fares to undertake long journeys. High rates of speed and increased comforts were then required, and these might be charged for. Every case, therefore, should be treated in consideration of its local circumstances.

The postal facilities afforded by railways were very great. But for their existence Mr. "Rowland Hill's" plan never could have been effectually carried out. Railways afforded the means of carrying bulk, which would have been fatal to the old mail-coaches. Every Friday night, at present, when the weekly papers were transmitted, 8 or 10 vans were now required for Post-office bags on the North-Western Railway, and this use of 8 or 10 vans implied, at the least, the employment of 14 or 15 mail-coaches; and the expenses of 14 or 15 mail-coaches to Birmingham could never have been sustained by a penny

postage. For this great blessing, therefore, the nation had to thank the railways. They were the great engines for the diffusion of knowledge. Government never could have carried The Times, of its present size, on the same terms, by the old mail-coach. The parliamentary blue-books never would have been printed; for, except by canal or by wagon, they could not have been distributed, and if they could not have been circulated they would have been useless. Nevertheless, the Post-office did not appear to treat railways with all the consideration they were entitled to expect. Great services were required, and, in return, it had been contended that no profit should be allowed to the railway companies, except as carriers and workers of the line. Railway companies were, therefore, indifferent to postal traffic; which was shown to be a serious disadvantage to the public. At present the Post-office competed with railways as carriers of book-parcels, a principle which might be extended still further, but not without injustice and hardship to the railways.

Parliamentary legislation for railways was full of incongruities and absurdities, which were graphically described and illustrated. The acts of Parliament which railways had been forced to obtain had cost the public £14,000,000 sterling. But this was shown to be the exclusive fault of Parliament itself, and of the system it enforced. The legislation of Parliament had made railways pay 70 millions of money to land-owners for land and property; yet almost every estate traversed by a railway had been greatly improved in value. Parliament had taxed the companies in favor of the land-owners, for what was called "severance." Claims for compensation for "severance" were based on theories which were wholly ideal and imaginary. No one had ever been able to show a practical loss by "severance," and the claim was often made as "customary" where it was even admitted that no ground for it existed. The remedy which suggested itself for this state of things was one which Parliament was not likely to grant. A competent tribunal was wanted, and Parliament was incompetent. Neither its practical experience, its time, nor its system was adapted for railway legislation. If a mixed commission could be organized. to consist of practical men of acknowledged legal, commercial, and mechanical ability, there might be some chance of railway business being efficiently conducted. But it was admitted that there was little hope of any such concession.

Railway management was next considered, and shown to be completely anomalous. Parliament had legislated for railways as toll-taking companies; but every direction was obliged to embark in enterprises foreign to the parliamentary objects of the railway itself. This produced serious dilemmas. As long as dividends, were kept up the directors were popular, however illegal their acts; but the moment dividends fell, the directors, however energetic, wise, or prudent, were visited by the shareholders and the public with all the penalties of having exceeded the letter of the law. Men whose reputations were at stake were, consequently, unwilling to incur the risk of becoming railway directors; and the most enlightened managers and shareholders were revolving in their own minds how the dilemma could be escaped. It was suggested that advantage might

be taken of the Limited Liability Act, or of some analogous measure, to enable a limited number of men of business to take lines of railway from shareholders on leases, subject to certain conditions and terms. A few of the lessees would then constitute themselves managers, and, being free from apprehensions on account of shareholders, of external interference, or of personal liabilities, they would be able fully to work the line and enter into those enterprises necessary for its development and essential to its prosperity. A large profit would accrue to those who took the line, and managed it with vigor and economy; while shareholders would derive great advantages from the certainty of receiving fixed dividends, and from the enhancement of the value of their property, and practical security would be afforded to the public, while their best interests would be consulted.

The electric telegraph—that offspring and indispensable companion of railways—was next considered. 7200 miles of telegraph, or 36,000 miles of wires, were laid down at least, 3000 people were continually employed, and more than 1,000,000 public messages were annually flashed along this "silent highway." To the working of railways the telegraph had become essential. The needle was capable of indicating at every station whether the line was clear, or blocked, or if accident had anywhere occurred. The telegraph could, therefore, do the work of additional rails by imparting instantaneous information to the officers, and enabling them to augment the traffic over those portions of the line to which their duty might apply. It also enabled large savings to be effected in rolling stock, by affording the means of supplying such stock to any station at which it was needed from some other station where it had accumulated and was not wanted. The mode in which this system was worked was described, and its simplicity was commended. As a perpetual current was passing through the wires, the guard or engine-driver had only to break the train-wire in case of accident, and the officers at the nearest station were instantaneously apprised that something was wrong and that assistance was needed. Some statistics were given to show that the business of the Electric Telegraph Company had increased fifty-fold in seven years.

Railway accidents occurred to passengers in the first half of 1854 in the proportion of one accident to every 7,195,343 travellers. Ladies and gentlemen could scarcely "sit at home at ease" with the impunity with which it appeared that they could travel by railway. How frequent, comparatively, were the accidents in the street; how fearful the misadventures to those "who go down to the sea in ships." Yet Parliament had seen fit to legislate expressly for accidents by railway, without legislating in the same way for accidents from other sorts of locomotion. This was unfair to railways, and ill-calculated to afford protection to the public where it was most needed. Lord Campbell's Act, also, measured men's lives by a class standard. The family of a high public functionary would get large compensation, while the family of the poor working man would get nothing. The practical tendency of this law was to retard the adoption of low fares. Railway managers were compelled to consider not only what they might gain, but what they might lose; and the larger the number of passengers, the greater the risk of accident to some of them. The com-

panies were, practically, obliged to insure the life of every person who travelled on their line, without being able to apportion the premiums to the risk incurred.

The results of railways were astounding—90,000 men were employed directly, and upwards of 40,000 collaterally; 180,000 men, with their wives and families, represented a population of 500,000 souls; so that 1 in 50 of the entire population of the kingdom might be said to be dependent upon railways. The annual receipt of railways now reached £20,000,000; or nearly half the amount of the ordinary revenue of the state. If railway intercourse were suspended, the same amount of traffic could not be carried on under a cost of £60,000,000 per annum; so that £40,000,000 a year were saved by railways. To the public "time is money," and in point of time a further saving was effected; for on every journey averaging 12 miles in length an hour was saved to 111,000,000 passengers per annum, which was equal to 38,000 years in the life of a man, working eight hours a day; and allowing an average of 3s. per diem for his work, this additional saving was £2,000,000 a year. The moral results of railways were equally remarkable; railways were equalizing the value of land throughout the kingdom by bringing distant properties practically nearer to the centre of consumption, and by facilitating the transit of manures; thus enabling poor lands to compete with superior soils. The stimulus afforded to national industry was exemplified by the progress of the boiler-plate manufacture; and the increased comforts afforded to the people were illustrated by the extraordinary progress of the fish trade and the development of the inland coal-traffic. It was observed that, before railways existed, internal communication was restricted by physical circumstances; the canal traffic was dependent on the supply of water at the summit-levels, and upon the vicissitudes of scasous of either drought or frost. Railway communication was free from all these difficulties, and every obstacle that nature had opposed science had hitherto effectually surmounted.

The address concluded with some words of practical application. The duty devolved on civil enginers of improving and perfecting this vast system. Every farthing saved on the train mileage of the kingdom was £30,000 a year gained to railway companies. There was, therefore, ample field for economical appliances, and, therefore, no economical arrangement, however trifling, was to be neglected. Nothing would afford the President greater satisfaction than that from his observations some sound practical improvement should result to a system with which his name, in consequence of his father's works, had been so largely associated; for, however extensive his own connection with railways, all he had known and all he had himself done was due to the parent whose memory he cherished and revered.

Referring to the benefits derived from the institution, the President observed that it was the arena wherein had been exhibited that intelligence and familiar knowledge of abstract and practical science characterizing the papers and discussions; in consequence of the constant intercourse within its walls, professional rivalry and competition were now conducted with feelings of mutual forbearance and conciliation, and the efforts of the members were all directed in the path of enter-

prise and towards the fair reward of successful skill. The business of the civil engineers, from a craft, had become a profession, and by union and professional uprightness a great field was opened to energy and knowledge.

As to the proposal for shortening the tenure of the office of president, his opinions were well known and remained unchanged; his mission, however, now was to conform to any course that was deemed for the general good; and all he asked was the support and assistance of the members, while he devoted his best energies to the performance of the duties of the office to which he had been elected.

The report for December, 1855, is made up from returns from 286 banks and one branch. Two banks have finally closed. Four new banks have organized since last report. The Outario Bank and branch, and Bank of Chenango (Safety Fund Banks) charters expired 1st of January, 1856. The Bank of Chenango continues business as an Association. The Outario Branch Bank has organized as an association, under the name of "The President, Directors, and Company of the Outario Bank," and the old Outario Bank is closed, after a successful business of many years. An essential improvement has been effected in the preparation and publication of the official quarterly returns. For the first time, the liabilities and assets appear to be equal.

### AGGREGATES

The following table contains a summary of the aggregate capital, circulation, coin, loans, bank-balances, individual deposits, and suspended debts, of the several chartered Banks of Kentucky and their branches, namely: I. The Bank of Kentucky, and five branches. III. The Bank of Louisville, and two branches. IV. The Farmers' Bank of Kentucky, and seven branches. V. The Southern Bank of Kentucky, and five branches. VI. The Commercial Bank of Kentucky, and two branches—making, altogether, thirty-four banks. The effect of the restricted circulation of the Western banks in the fall of 1854, (when nearly all the Indiana free banks failed.) is seen in the following table. Twelve months ago the circulation of the Kentucky banks alone was reduced more than one third, compared with January, 1854—or from \$13,500,000 to \$8,600,000.

The charter of the Bank will expire in January, 1857. The Bank reports that there is an estimated loss of circulation, to the present time, to the extent of \$143,908. This is not an over-estimate, when the large circulation of the Bank is considered, and the long series of years in which it has been used.

GOLD MINES OF SIBERIA.—To its abundant and valuable minerals, Siberia, and indeed Russia Proper, owes a vast accession of wealth. The number of workmen required in the mines is considerable, and their work is costly, but the production had continually increased, the yield being now very large. In Western Siberia, the principal mining is in the Ural Mountains, where there are likewise precious stones of great value. The following is the list of precious stones and ores which are abundant in the neighborhood of Ekaterineburg — diamonds, amethysts, topazes, emeralds, rubies, sapphires, jasper, porphyry, malachite, gold, silver, iron, copper, and platinum. In Eastern Siberia, the more important gold washings are within a triangle bounded by the Angara to the east, the Yenessei to the west, and Chinese Tartary to the south. In this latter district are situated the penal silver mines of Nertchinsk. The precious metals of the district are forwarded, under escort, to Russia. From the Ural mines, a portion is forwarded also by land to St. Petersburg; while the heavier produce of the various ores is put into boats on the Ai at Statonst, and reaches the same city by water after an intricate river navigation of more than 3000 miles. A portion of the copper is sent to China. The labor in the mines is still partly supplied by migration from the neighboring towns. The city of Tomsk, for instance, is nearly deserted in the month of June, by its able-bodied population, which goes to work at the mines on the Yenessei. In September it returns. The proprietors and agents are compelled by law to dismiss these workmen in that month, and they return to their winter residence. The wages that they have earned during their absence would with frugality support them throughout the year; but it is scarcely necessary to say that frugality among this class of persons is rare. Not only the city, but the district generally suffers deeply from their crimes.

### NOTES ON BANKING AND STOCKS.

TWENTY-ONE YEARS IN THE BOSTON STOCK MARKET, OR FLUCTUATIONS THEREIN FROM JANUARY 1, 1835, TO JANUARY 1, 1856, WITH THE SEMI-ANNUAL DIVI-DENDS PAID FROM COMMENCEMENT OF THE BOSTON BANKS, INSURANCE, RAIL-ROAD, AND MANUFACTURING COMPANIES; SAVINGS BANKS; STATE, CITY, AND MISCELLANEOUS STOCKS; CONSOLS, AND BANK OF ENGLAND STOCK FROM 1720, WITH DIVIDENDS SINCE THE YEAR 1694.

[WR are permitted to copy the following details from a pamphlet under the above title, recently issued by Mr. Joseph G. Martin, Commission Stock Broker, No. 10 State street, Boston. In addition to the copious information now republished by us, the pamphlet contains other valuable statistics in reference to the rate of interest in London for each year from 1822 to 1856, also the rate of interest charged by the Bank of France from 1800 to 1856; rate of exchange between England and the United States for the past thirty-four years, and other matters which render the publication an exceedingly useful one to all who take an interest in subjects pertaining to Banking, Currency, and Stocks. Price, fifty cents.

Editor B. M.]

1835. A Golden Age for Money Borrowers.—Financially speaking, the year 1835 was a golden one. In January, appeared the following and like advertisements, which would have read curiously enough a year ago, and would attract considerable attention even now: "Money may be had at 5 per cent per annum, on deposit of bank stock as security." \$15,000 to loan on bank stock, at 5 per cent per annum."

The City Treasurer advertised for a five per cent twenty years' loan, and—no bid to be accepted at less than five per cent advance! Bank stocks consequently commanded as high prices as now, although their dividends were not up to the present high-water mark. Towards the end of the year there was a change, and by the spring of 1836 money was worth a handsome premium; and in the fall, good notes were offered in New-York at three per cent a month. Stocks sensibly declined, and the premonitory symptoms of the crash which came in 1837, were visible.

UNITED STATES BANKS.—The Constitution of the United States was adopted in 1789, and the government was soon after organized. On the 14th of December, 1790, Alexander Hamilton, the founder of our system of finance, reported to Congress the plan of a government bank. The bill passed in February, 1791, and General Washington, after considerable consultation with his cabinet, approved it on the 25th of that month. Its capital was limited to \$10,000,000, and the subscriptions were filled as soon as opened—the government taking five thousand shares, equal to \$2,000,000; and the bank went into immediate operation.

The stock, a large part of which was held abroad, soon rose considerably above par; and during the twenty years' continuance of its charter, the average annual dividends amounted to eight and a quarter per cent. Its charter expired March 4th, 1811, and a renewal was refused. Congress then appointed trustees to close up its concerns, and 70 per cent of the capital was paid to stockholders.

June, 1812; 18 per cent. in October; 7 per cent., April, 1813; and 5 per cent., April, 1815; making in all the par value. Since then, (up to 1834,) 9 per cent. more has been paid; but although stockholders eventually received 109 per cent., such was the delay in the payments, that they actually received net less than par if it had been paid at the time the charter expired, taking into view the loss of interest.

The Second United States Bank.—From 1811 to 1816, the country was without any national bank. April 10th, 1816, the second United States Bank was established, with a capital fixed at \$35,000,000! "It commenced operations Jan. 1st, 1817, with \$14,000,000 United States stock, and \$1,400,000 of coin. In 1815 the circulation of bank notes was about \$47,000,000; 1816, \$70,000,000; 1818, \$89,000,000. The contraction of the currency caused by the revulsion of 1819, was so rapid and severe as to create general distress throughout the country. In 1820 the circulation had been reduced to \$45,000,000, a contraction of one-half in two years. Bank capital in 1830, \$145,192,268; circulation, \$61,323,898. Banks failed or discontinued from 1811 to 1830, 193; capital \$30,000,000."—Hayward's Gazetteer.

Nicholas Biddle's U. S. Bank.—Previous to the expiration of the charter of the second United States Bank, (1836,) Congress had voted to renew it, but the bill was vetoed by President Jackson. The bank was re-chartered, however, by Pennsylvania, as a State institution, with its existing capital, \$35,000,000—the new bank paying a bonus to the State of \$2,000,000. 1836, February 14th, the stockholders of the bank voted to accept the new charter for thirty years, and transfer the interests of the old bank chartered by Congress, to the new one chartered by Pennsylvania. Nicholas Biddle, Esq., made a very flattering statement, to the effect that, after paying the bonus of \$2,000,000, etc., etc., there would be \$2,000,000 left from the reserved fund, besides the capital of the old bank. The services concluded with the tender of a splendid service of plate to Mr. Biddle! The new bank declared a dividend of four per cent. in July, the result of four months' business, with a large surplus left, as was stated. [This bank continued till 1841, when it failed, the stock becoming almost a total loss.] We give the following quotations of prices of the stock of this bank, as it was a sort of general concern, with stockholders throughout the Union:—1836, 129 to 109; '37, 120 to 941; '38, 125 to 113; '39, 123 to 70; 1840, 81 to 60; '41, 641 to 31!

Closing up of the Second United States Bank.—The value of the shares of the second United States Bank, at the time of closing, was determined by the Commissioners appointed by the Secretary of the Treasury to estimate the value of the stock, to be \$115.58 per share; and the shares belonging to government were proposed to be made payable in instalments, in 1837-8-9-40, which terms were acceded

to by the new bank.

United States Branch Bank in Boston.—The second United States

Bank had a branch established in this city, located in Congress Street, rear of the late Exchange Coffee House. The present Merchants Bank building was erected in 1824 by the United States Bank, at a cost of \$120,000, and the branch removed thither. Upon the closing up of the branch banks, the banking house was sold at auction for \$80,000, and shortly after purchased by the Merchants Bank at \$90,000. The estate was bid off at the auction by Henry Williams, and the current joke of the day was, "sold by old Nick, and bought by old Harry."

\$10,000,000 Bank.—A \$10,000,000 Boston bank was petitioned for in 1836, one-half to be subscribed by the State in four per cent. bonds, the other half by individuals. Lost on its passage to a third

reading.

Post Notes.—A bill passed the Legislature, March, 1836, [repealed Feb. 1, 1838,] allowing banks to issue post notes, to an amount not exceeding fifty per cent. of capital actually paid in, provided they issued no notes less than five dollars. The following is a copy of one of these documents:—"The President, Directors and Company of the —— Bank, promise to pay H. H. or bearer one thousand dollars, in seven months, with interest at the rate of four and a half per cent. per annum, until due, and no interest after." Signed by the president and cashier.

This privilege was principally used by certain weak banks, as the Chelsea, Franklin, Lafayette, Fulton, and Hancock, which needed all the props they could get to keep them on their legs, as they were

in a fixed consumption.

1836. RALLY IN STOCKS.—Towards the close of the year, bank stocks rallied, the higher prices in the subjoined list being the ruling

quotations.

1837. THE CRISIS AND ITS CAUSES. HEAVY FAILURES.—This year opened gloomily enough in a financial point of view; stocks down, and money market tight as a drum head. In March, the Chelsea Bank, at Chelsea, failed. Circulation, \$90,722; post notes, \$20,600; visible assets, thirty-six dollars seventy-one cents; said to consist of a counter, iron safe, and bull-dog! The New Orleans mail brought accounts of great failures in that city, the precursors

of the approaching crisis.

The causes of this monetary crisis were attributed to the failure of crops, extinction of United States Bank, specie circular, (requiring payment for public land sales in specie,) speculation mania, etc. The following facts are significant. There was an importation in 1835 of \$150,000,000, against an exportation of but \$121,700,000, from which deduct for loss in goods shipped at an inflated price, perhaps \$10,000,000. Prices were, however, sustained and advanced, the currency having increased from 1834 to '36 more than fifty per cent. In 1836, the imports were \$190,000,000; exports something under \$129,000,000.

LAND SPECULATION was so rife, that in 1835-'36, government lands were purchased to the tune of \$39,000,000, all payable in

cash; and for the first two months of 1837, the purchases amounted to \$2,239,481; a total in twenty-six months of above \$41,000,000 paid for new lands—equal to the whole amount, within \$8,000,000, of the sales for forty years, from 1794 to 1834. Old lands, city and village lots, railroads, canals, cotton and negroes, became objects of speculation, and when the crisis came, the fall was great. In two days, houses in New Orleans stopped payment for an aggregate of \$27,000,000, one house alone having liabilities stated at \$15,000,000. Many can familiarly recall the Eastern Land speculation in 1834-5, which failed or crippled many of the banks in Maine, and caused much distress in this and other sections of the country.

Suspension of Specie Payments by the New York Banks occurred May 10, 1837, after paying out \$600,000 in specie to bill-holders and depositors the 8th, and \$700,000 the 9th. Suspension followed by the banks throughout the Union, excepting the State Bank of Missouri. The amount of failures in New York from March 20th to April 12th, was for \$40,000,000, and went on increasing up to time of suspension, amounting to 50 or 60,000,000 dollars, and the number of suspended houses in that city had reached 352 by the second week in May.

This was the first general suspension, though all but the New England banks suspended during the last war, and many of them did not resume until after the revulsion of 1818 and '19. A large number of them also failed entirely.

RESUMPTION OF SPECIE PAYMENTS.—The suspension of 1837 lasted about one year; specie payments being permanently resumed by the banks of New England and New York in May, 1838. The United States Bank of Pennsylvania, and others south, also attempted a resumption, but were obliged to suspend a second time, in October, 1838. These banks again resumed, in January, 1841; but, after a short period of only twenty days, stopped again. The United States Bank of Pennsylvania failed, and the Philadelphia banks resumed for the fourth time, March, 1842. Others of the banks south gradually resumed, and some went into liquidation, since which specie payments have been maintained.

CASH AND CREDIT.—The difference between these, in the spring of 1837, before the suspension, was very marked, especially at the south and west, as the following incident will show:—A negro was put up at auction at Vicksburg—a cash sale—and \$350 the best bid obtained. The terms were then changed to twelve months, with ample security, and the price was run up to \$1625!

BANK EXPEDIENTS FOR RETAINING SPECIE.—To avoid being troubled for specie, banks in certain sections resorted to various means to keep it, in the spring of 1837. At Charleston, (S. C.) the banks refused in April to pay silver, and turned out sovereigns. One of them had an old man with spectacles, to weigh each one separately, at the rate of 100 per hour. A gentleman applied for \$500 in gold, to carry with him to New York. The old gentleman commenced weighing and counting the sovereigns at 10 o'clock, and

continued very deliberately till 2 o'clock, when taking out about twenty dollars of the amount, he very coolly shoved back the other pieces as deficient in weight, and politely invited the gentleman to call the next day, as the hour for closing had arrived.

Immense Increase of Banking Capital.—The period from 1830 to 1837 was marked by an extraordinary increase of banking capital, the largest during any period of our history. Hayward's Gazetteer states that "there were in 1830, 329 banks and branches in the United States, with a capital of \$143,301,898; in 1840, 901 banks and branches, with a capital of \$358,442,692; being an increase of \$215,140,794 in nine years.

"The loans and discounts upon the capital were, in 1837, \$525,-115,702; in 1840, \$462,896,523. The financial revulsion in 1837 and 1840, caused an extensive failure among the banks, with almost the entire loss of bank capital in Mississippi, Illinois, Alabama, and portions of other states. The loss of bank capital during the transition, from 1838 to 1846, by failure or otherwise, amounted to \$161,558,383, resulting in a contraction of the circulation of \$54,088,755, and a reduction of 194 in the number of banks, from failure alone."

Suspension of the Boston Banks.—The Boston banks suspended May 12th, 1837. A public meeting, at which the mayor presided, was convened at Faneuil Hall, evening of May 11th, in consequence of the suspension in New York the 10th. Resolutions were passed, deploring the necessity of the measure, expressing confidence in the Boston Banks, appointing a committee to wait upon the bank delegates then in session, to express the views of the meeting, etc., etc.

The Boston banks formed themselves into an association called the "Associated Banks," composed of all excepting the Massachusetts Bank, which declined becoming a member. The Associated Banks adopted a code of regulations for mutual aid, and as a safeguard to the public during the suspension. The Legislature subsequently relieved the banks of the penalty of two per cent. a month for refusal of payment of their notes.

Relief to the Money and Stock Markets.—Upon the suspension of specie payments, the market was relieved, and stocks rapidly rose. United States Bank shares, which had fallen to 95, went up to above par, and the market was suddenly inflated to a considerable extent, though prices fell off again in a few weeks. Boston and Providence Railroad stock went up from 95 to 101, Worcester, 78 to 92½, and Lowell, 87 to 96, which stocks at that time were among the leading ones of the market. Specie was worth from 10 to 13 per cent. premium, and by so much, therefore, the paper currency was a depreciated one. Specie payments, as before noted, were gradually resumed in the spring of 1838.

Downfall of Banks.—In the summer of 1837, the Franklin and Lafayette Banks, located at South Boston, failed—both rotten concerns. The excitement consequent upon specie suspension had

subsided, and confidence was in a good degree restored—bank stocks were recovering, money easier, and everything wore a more cheering aspect—when, in January, 1838, the Commonwealth Bank exploded, and, like a bomb-shell, threw consternation and dismay into the monetary circles. The high position it had enjoyed as a government deposit, or Pet Bank, so called, and the confidence reposed in it, made its failure a disastrous one. Its capital was \$500,000. Debts due from directors, \$630,958 71. Liabilities of president, as principal and endorser, \$259,117. The security at the best, said the legislative committee, whose report filled the side of a newspaper, is entirely inadequate.

The 16th, the *Middlesex* Bank at East Cambridge stopped. The failure of these two banks occasioned many rumors unfavorable to other really solvent institutions, which produced an unusual distrust

and apprehension in the community.

Scarcity of Reliable Bank Bills for Circulation.—What aggravated this distrust, was the almost entire absence from circulation of the bills of banks of undoubted credit, and the great increase of those of recent origin. By return to the Secretary of State, in October, 1837, the entire circulation of the Atlas Bank, with a capital of \$500,000, was only \$18,716, (reduced, February, 1838, to \$16,524,) and of the Massachusetts, (\$800,000 capital,) \$27,587; whilst that of the Commercial, in March, 1838, with the same capital as the Atlas, was \$515,000! The Associated Banks therefore agreed to withdraw from circulation the bills of the Commercial, Hançock and Fulton Banks, to the amount represented by them out, they agreeing to make no new discounts; and by February 1st, nearly \$1,000,000 of the notes of these banks had been thus withdrawn. The Commercial Bank thereupon closed up, but its loan was so elastic, that in one year it had not only redeemed its enormous circulation, but declared a dividend of 34 per cent. to stockholders, and eventually returned them about 80 per cent.

BOARD OF BANK COMMISSIONERS.—This board was organized, spring of 1838, and Julius Rockwell, Waldo Flint, and Jonathan Shove, were appointed by the governor as the first commissioners.

The Fulton and Hancock Banks failed, as they could not stand the healthful curtailing forced upon them by the Associated Banks. The commissioners reported one half the assets of the former worthless, and much of the remainder doubtful. The directors felt confident of redeeming their liabilities to the public, and the commissioners inclined to the same opinion. In 1842, the Hancock had redeemed its circulation, and, as was stated, a dividend would be paid from the sale of its effects.

American Bank dropped by the Associated Banks.—It was stated in the examination before the Legislature, that its capital of \$500,000 was loaned to two houses—\$300,000 to one, the balance to another. Its failure was charged to mismanagement. It redeemed its small bills in other current bank notes. The commissioners reported, in 1842, that it would return stockholders \$297,500, equal

to about 60 per cent. The wheels of the Oriental Bank, with a capital of \$750,000, got so clogged that it could not move on. Its charter was repealed, and in 1842 the commissioners stated that it had paid stockholders \$210,000, and there would be a further dividend of seven per cent. The Suffolk also politely gave notice one morning, that the bills of the Kilby Bank would be no longer received. The Kilby had a capital of \$500,000, but its career was short and not brilliant, as a sort of distrust hung over it. The banks received its bills, but paid them out the first opportunity; and just before its failure, if you presented a check, you were sure to be paid in Kilby bills—if there were any on hand. [The banks of Massachusetts were prohibited, in 1843, from paying out any but their own bills.] There seemed to be a presentiment that its day of probation was short. The commissioners reported its resources ample for discharge of liabilities to the public.

LARGE IMPORT OF SPECIE.—Specie was now constantly arriving in immense quantities. Three packet ships brought a million each to New York in one week, and thirty-two drays, each containing six kegs of \$5,000, arrived in one day before the doors of the United States Bank at Philadelphia. The import of specie into New York alone, was estimated, June 1, at \$10,000,000. American gold down

to 1 per cent. premium.

APRIL 16TH, 1838.—The MERCHANTS, COLUMBIAN and NORTH Banks of Boston had the honor of being the first to resume specie payments in full, which they did from this date; other banks redeeming their small bills. The New York banks resumed soon after,

in May; the Pennsylvania, in August.

Fractional Bills.—During the suspension of specie payments, the want of small change was such as to induce various devices to meet its absence. Among others, was the issue of fractional bills, for \$1.25, \$1.50, \$1.75. The State and Oriental, of the Boston banks, issued a large quantity; also the Taunton and Providence banks. A certain hour of the day was appointed at the State Bank, when packages of fifteen dollars, Boston money, would be exchanged for fractional bills. The rush was immense for many days, and the large bank hall crowded with applicants. The Associated Banks discountenanced these issues, as contrary to the spirit of their charters; but the fractional bill banks were regarded as public benefactors, as they really were during the emergency. These issues were prohibited by legislative enactment in 1853, under penalty of \$100 for each offence; and any person who circulates a fractional bank bill in Massachusetts, is liable to a fine of \$25 therefor.

Spurious Copper Coin.—The manufacture of base copper coin was carried on, on a large scale, to supply the absence of cents. These bore all kinds of devices and caricatures, mostly levelled at Gen. Jackson's policy. In the midst of a brisk and lucrative business, orders came from the Attorney General at Washington to prosecute all makers, venders and circulators of the spurious coin, the

prerogative of furnishing the metallic portion of the currency belonging to government—and thus ended the fun and profit.

1839. MIDDLING INTEREST BANK.—On a pleasant August morning, the Suffolk Bank issued its card in accustomed form, to the effect that this bank had lost caste; whereupon the commissioners stepped down to Lynn Street, near the Chelsea Ferry, where it was located,

and put the muzzle on.

October, 1839. A Second Suspension by Philadelphia, Balti-More, and other Banks, South and West-New York and Boston banks stood firm. There was, however, necessarily a great stringency in the money market, and bank stock touched the low figures in our subjoined list; furnishing the only instance, we believe, of the Suffolk Bank selling below par. There was a stampede downwards after the October dividends. The scarcity of money at New York was said to be intense. The United States Bank had paid out, since resumption, \$20,000,000 in specie and specie funds. Its stock fell rapidly. In the spring of 1840, it had fallen from 120 to 70. A writer, speaking of the financial condition of Philadelphia as an enigma, said that the real difficulty arose from the position of the United States Bank. "It is not to be concealed that this institution, with its enormous capital, has been actually run aground—and that, after the lapse of six months, it is still unable to get affoat." In February, 1841, after a second resumption of short duration, the United States Bank again suspended, and failed, followed by a third and partial suspension throughout the south and west. Bicknell's Reporter estimated the aggregate losses by stocks, within the two years preceding the spring of 1841, at \$50,000,000.

Since the 15th of January, when it resumed, up to February 5th, the United States Bank had paid out \$6,000,000 in specie and specie funds. Capital, \$35,000,000. Actual capital, \$32,500,000. Estimated loss to stockholders, \$28,000,000!! The bank having stranded, flat on its back, eyes closed, and pulse gone, a post-mortem examination was held. We have not space for a report; but in January, 1842, several of the directors were arrested on charge of conspiracy to defraud the stockholders, and gave bonds in \$10,000 each, and among them was the president, to whom that beautiful service of plate had been presented. It was said that the carcass of the monster cut up fat, but the fees of the dissectors absorbed the richest part of the blubber. The carving up of the defunct took fifteen years, such was the magnitude of its proportions; and a final distribution was

not to be made till the fall of 1855.

Fiscal Bank of the United States.—In 1841, the Secretary of the Treasury submitted the plan of a Bank and Fiscal Agent, freed from the constitutional objections urged against those heretofore created by Congress. Capital, \$30,000,000. Vetoed by President Tyler.

Another Monetary Pressure.—The lower figures for bank stock were towards the close of 1841, when the pressure for money was severe-or, as a financial writer remarked, "The money mar-

ket is as tight as the skin on a cat's back." The Eagle Bank declined in December, 1841, on account of a defalcation, estimated from \$25,000 to \$40,000. Passing two dividends made all right.

1842. In January of 1842, the Girard Bank, of Philadelphia, caved in, and trouble followed at the Pennsylvania Bank, which held the \$800,000 with which the February State interest was to be paid. A run was made upon it, and for the security of the public moneys, and for general interest, the governor interposed, and its doors were closed. Its stock fell to \$50 offered for \$400 par value, or twelve and a half per cent.

Losses of Pennsylvania by Her Banks.—The par value of the bank stock owned by Pennsylvania, and sold at auction in 1843, was \$2,533,676. Its market value, \$389,056!

PRESENTERIAN CHURCH FUND.—This fund amounted to \$189,000. By the wreck of matter in the financial world, it was worth, in June, 1842, only \$46,705—making a loss of \$142,295.

JUNE 1st, 1842.—Most of the New Orleans banks again suspended specie payments. A panic set in, which caused a run upon them.

A BANK COLLAPSE.—October 1st, 1842, the Charlestown "Bunker Hill Aurora" gave notice that a dividend would be paid at the Phosnix Bank, on Monday, the 3d; when lo! on arriving at the bank, instead of a dividend, the stockholders found on the door a notice, to the effect that the bank had failed! Speaking of this failure, the Post said: "Many are those who, in one short hour, have gone from comparative ease to poverty. Since the town was destroyed by the British, it has had no severer blow." Whole capital of \$300,000 lost by a series of frauds. The enterprising proprietor of Oak Hall gave notice that \$5,000 of its bills were wanted immediately, at par, in exchange for clothing.

VALUABLE Assets.—\$139,267 72 of the broken Lafayette Bank's assets sold at auction for 66 dollars 25 cents, for the lot!

Unusual Plethora in the Money Market.—The spring of 1843 opened with an inactive money market. Large amounts seeking investment at lower rates. Operations quoted as low as four and a half per cent. per annum. Banks and insurance companies loaning freely on demand at four and a half and five per cent.; and one of our leading banks, as we have been recently informed by its president, loaned a portion of its capital, in 1843, at three per cent.; and by the cashier of another bank, that they made a loan of \$100,000 at three per cent., to parties, who afterwards complained of a bad bargain at that. The securities offering were wholly inadequate to the demand. The above will account for the comparatively high prices of bank stock, whose dividends, owing to the low rates for money, were small, compared with the fat returns since 1850.

Banking at Low Water Mark.—In October, 1843, the stock-holders of the South Bank voted to surrender the charter, and close up. Ninety-seven and a half per cent. was returned to the shareholders, although its stock had been selling down to 60 per cent. Banking business had become so poor in 1843, that several institutions

680

were on the point of closing up. The Washington Bank, by a vote of 260 to 185, decided to surrender their charter; but this vote was not sufficient to make a legal surrender. The North Bank narrowly escaped closing up, at the time of its removal from North Market Street to the Merchants Exchange. It was urged that the bankcould wind up, and return stockholders their capital to invest elsewhere, as it was not probable it could earn six per cent. over expenses. The result has proved otherwise. The president of the Atlas Bank spoke very discouragingly, at the annual meeting, of continuing the bank in operation, as the stockholders could probably

find a better investment for their capital.

Since 1843, but few incidents of bank note have occurred. The dividends have been steadily increasing, till they have arrived at a handsome mark, with large surpluses on hand; and some of the banks, meanwhile, have made extra dividends, as the notes following our tables will show. But such was the shock given to banking property, that it was fifteen years before it fully regained the favor enjoyed prior to 1837. In that year, our banks yielded to a stern necessity alone in suspending, and they were the first to resume, in the spring of 1838. In looking over the list, it is a matter of congratulation and pride that so many institutions survived the crisis with their capitals unimpaired, and maintained the payment of dividends to some extent. The banks that failed or stopped, were, with few exceptions, new banks, of but little standing; and, although stockholders suffered severely in individual cases, the public lost but Additional restrictions and safeguards have been thrown around our banks, by legislative enactment, which have placed them in higher confidence with the public as an investment.

Banks around Boston.—Of the four banks at Roxbury—the Norfolk, Winthrop, Roxbury and People's—the last one alone survived the storm. The Norfolk had previously suffered by a robbery, and the disasters of 1837 finished it up. It, however, as well as the Winthrop, settled up all liabilities to the public, with a surplus left for stockholders. The Roxbury bank was a sort of swindle, as stated at the time of its existence. At Charlestown, the Bunker Hill Bank alone survived. The Charlestown Bank closed up, with some loss to stockholders; and the Phænix afterwards blew up, as we have stated, and blew down the fortunes of several un-fortunate stockholders. The Cambridge banks got through more comfortably than most of their neighbors. The Middlesex Bank, (East Cambridge,) before alluded to, eventually paid 42 per cent. to stockhold-The financial tempest of 1837 caused a sad shipwreck of banking institutions, and swept away many a fortune. People now talk about losses by railroads; but, take the country through, the latter have been small compared with those sustained from 1837 to 1843, by broken and crippled banks.

Spring of 1844.—The increasing demand for money, required by a reviving trade, affected the stock market unfavorably. Interest rose to six per cent. From 1844, the demand for money, up to 1855, was almost constantly active—the spring and summer of 1852

being the only exception—on account of the immense absorption of capital by railroads, and their being constant borrowers in the market at high rates of interest. For a period of ten years, there was hardly a time when money could be had outside of banks at six percent., excepting in 1852, as mentioned above.

RISKS OF BANKING.—According to a pamphlet on the credit system of France, England, and this country, published in 1838 by H. C. Carey of Philadelphia, it appears that from 1795 to 1831, the average amount of loss on commercial paper, by the Bank of England, was but  $\frac{420}{100}$  of 1 per cent. upon the capital employed. From 1811 to 1816, the loss on the loans of the Massachusetts banks were not over  $\frac{1}{3}$  of 1 per cent. upon the average amount of capital loaned. From 1812 to 1837, the Bank of America, in New York, on loans averaging \$2,945,000 per annum, sustained but an average loss of \$2,820, or less than  $\frac{1}{10}$  of 1 per cent. Stephen Girard, of Philadelphia, transacted banking business nearly twenty years. Average loan, \$2,250,000; losses about \$225,000, or an average of  $\frac{1}{2}$  of one per cent. per annum.

The losses of the old Bank of the United States, for twenty years, averaged but  $\frac{5}{100}$  of 1 per cent. per annum. We learn officially that the Bank of North America, (Philadelphia,) has, within the last five years, discounted fifty-six millions of dollars, with a loss of only \$1,370! The above will show that banking is far from being

an unsafe business, when properly conducted.

Banks Chartered But not Organized.—Banks have been frequently incorporated, whose stock could not be disposed of; and it appears from official reports, that the following banks, chartered for Boston, never went into operation:—

| CHAR-<br>TERED. | Banks.                 | Capital.     | CHAR-BANKS.              | Capital.  |
|-----------------|------------------------|--------------|--------------------------|-----------|
| 1824.           | Mechanics and Traders. | - 35000,0000 | 1828 - Merchants,        | \$500,000 |
| 1827.           | South Boston,          | - 500,000    | 1836 India, (second.), - | 1,000,000 |
| 1828.           | Hamilton,              | - 500,000    | 1836. Blackstone         | - 500,000 |
| 1828.           | India,                 | - 500,000    | 1850. Haymarket Square,  | - 150,000 |

Three other institutions, under the titles of the Hamilton Bank, (1831,) Merchants, (1831,) and Blackstone, (1851,) were afterwards chartered, which commenced business, and are in operation now. The Haymarket Square Bank was prevented from going into operation by an injunction being served upon it.

Boston Banks during the War of 1812.—The condition of the banks in Boston during the trying period of the war of 1812, and a short time prior, is shown in part by the following table, with the date of their charter:—

| CEAR-  | BANKS            |     | CAPITAL.           |                  | OSITS.             |             | BCIR.      |
|--------|------------------|-----|--------------------|------------------|--------------------|-------------|------------|
| TER.   |                  |     | 1814.              | June, 1810.      | Jan , 1814.        | June, 1810. | Jan., 1814 |
| 1784.  | Massachusetts.   |     | <b>\$1,600,000</b> | <b>\$472,000</b> | <b>\$2,404,000</b> | £238,000    | £2,114,000 |
| 1792.  | Union,           |     | 1,200,000          | 562,000          | 940,000            | 223,000     | 657,000    |
| 1803.  | Boston,          |     | 1,800,000          | 672,000          | 987,000            | 238,000     | 1,182,000  |
| 1811.  | State,           |     | 3,000,000          | •                | 1,677,000          | <u>:</u>    | 660,000    |
|        | New England,     |     |                    | -                | 542,000            | •           | 284,000    |
| Mass., | (city and counts | ry) | 12,140,000         | 2,671,000        | 8,875,000          | 1,561,000   | 6.393,000  |

The latter line includes also the statements of the banks in the then district of Maine.

LARGE PREMIUM ON BOSTON CREDIT.—During the war, the banks of Boston maintained specie payments, although the banks of New York and of most of the Southern and Western States suspended. Consequently, exchange on the southern cities was at a large discount. We annex quotations at Boston and Baltimore, for August, 1815:—

```
BOSTON.

Bills on New York, - - 12 to 13 pr. ct. dis.

" " Philadelphia, - 16 to 17 " " "

" " Baltimore, - - 18 to 19 " "

Government Bills on London, 8 pr. ct. prem.

Private Bills on London, 9 to 94 " "

Government six per cents, 88 to 89 pr. ct.

Boston Bank notes, - - - 16 prem.

New York " - - - 7 "

Philadelphia, " - - - 24 "

Western " - - - 7 "

Specie, - - - - - - 16 prem.

Government 6 per cents, - - 99 pr. ct.
```

It is a singular fact, that specie accumulated here to such a degree, that the banks not only declined to take it unless paid for so doing, but actually insisted, in some cases, on payment of checks in specie.

Banking previous to 1813.—The following were the banks chartered in Massachusetts previous to 1813:—

```

\* These Banks are not now in existence.

Twenty-three banks were chartered—in the several States—previous to 1800, and since that time these institutions have increased in rapid succession. Up to 1812 one hundred and twenty had been chartered, but of these only seventy-two continued in existence in 1846, though others had been chartered in the mean time. The total number of banks in the United States now, is about 1,500.

The date of the institution of some of the earlier banks in the several States of the Union, is as follows: New York, 1784; Maryland, 1790; the first bank of the United States, February 8, 1791; Rhode Island, 1791; South Carolina, 1792; Virginia and Connecticut, 1792; District of Columbia, 1793; Delaware, 1795; Maine, 1799; Kentucky, 1802; Ohio, 1803; North Carolina, 1804; Louisiana, 1811; and Georgia, 1812.

### BOSTON BANKS.

We herewith present, in the following pages, an elaborate series of tables, with explanatory notes, relating to the banks of Boston, which will be of interest, not only to the many hundreds who have invested their means in the stocks of the different corporations, but to the general reader, who takes an interest in financial matters, so far as success or failure bears upon the prosperity of the community. It is with pleasure and satisfaction that we are enabled to give the full history of our banks, commencing with the first institution of the kind in this State, (the Massachusetts Bank,)—which was also the second in the United States—and going through in detail with every dividend paid by each. We also present the highest and lowest market value of the different stocks, each year, for a period of twenty years, which will show that banking property has not always been the profitable kind it is at the present day. Within about ten years, strange as it may seem now, many of our best bank stocks were selling below par—some of them largely so—and at that time it was extremely difficult to obtain purchasers for them, even at the low price then current. The struggle for regaining the position lost by the disasters of 1837 and onward, was long and severe, but the triumph gradual and sure; so that the present position of the Boston banks which survived that severe crisis, as a sound, reliable property, needs no endorsement. A careful perusal of the columns headed "surplus," will convince the reader that all the profits are not paid out, in order to make large dividends. Some of the older banks have a reserve sufficiently large to warrant an increase in their semi-annual dividends, or the distribution of an extra one; but the policy of our bank managers has generally been conservative, and to this fact their present highly favorable condition is much indebted.

The failure of the Cochituate Bank, in 1854, and the late stoppage of the Grocers,—however unfortunate in themselves,—should not detract from the general soundness of other institutions, neither of the banks named ever having enjoyed the full confidence of the public.

Presenting the Highest and Lowest Prices each year from 1835 to 1844, inclusive. STOCKS. BANK BOSTON

\* The dividend paid in October, 1836, by the State Bank, was 7 per cent., 5 being extra for the proceeds of real estate sold, and 2 from the earnings of the bank for 6 months.

payments, as the banks, even if they were unwilling to redeem their bills DIVIDENDS IN 1857.—In the latter part of this year and in 1838 dividends were smaller in consequence of the suspension of specie pearned it, (which is doubtful,) did not think proper to pay higher dividends than at the legal rate of 6 per cent. per annum, while they at the counter. BANKING CAPITAL OF MASSACHUSETTS.—In 1803, it was \$2,225,000. From 1803 to 1816, increased to \$11,475,000; reduced the following year to \$9,296,000. From 1817 to 1829, increased to \$20,420,000; reduced within the next year to \$9,296,000. From 1821 to 1829, increased to \$20,420,000; reduced within the next year to \$19,295,000. From 1837 to December, 1844, reduced to \$30,020,000. The reduction of bank capital from December, 1841, to December, 1842, one year: was \$1,550,000. From 1844, the banking capital has steadily increased, until, at the present time, it amounts to \$659,000,000, comprised in 135 country and \$7 Boston banks.

## SEMI-ANNUAL BANK DIVIDENDS-CONTINUED.

1846 to 1856.

Also presenting the year when each bank commenced, the original and present capital, with the actual surplus Oct. 1854 and Oct. 1855, after paying the dividends at those periods, and exclusive of uncarned discounts, excepting the Columbian, National, and N. America, which include that item, equal to about one per ct. on the capital.

\* The Boylston Bank commenced operations December, 1845. First dividend for 9 months. † Extra dividends were made in the years marked thus (†). See Notes, † New England And Tremont.—These banks have surplus invested in real estate, probably \$100,000 each, in addition to the items above. The other banks include their real estate in the surplus, but generally at a low market value.

### NOTES TO BANK DIVIDENDS.

Atlantic Bank.—An extra dividend of 10 per cent. was paid by this institution in April, 1854.

Atlas.—The omission of seven dividends, from 1836 to 1840, was in consequence of heavy losses by the failure of the Nahant Bank, which were all made up from the earnings of the bank.

Blackstone-Original capital, \$250,000. Increased \$100,000 in 1853, and

\$400,000 in 1854.

Boston.—The dividends were paid June and December up to 1812, since which April and October. The original capital was \$1,800,000, divided into shares of \$100 each, and the State held one-third (\$600,000). The first charter expired Oct., 1812, and the bank was re-chartered with the same capital. At that time, when a charter expired, the bank was obliged to go through the form of winding up and commencing anew; consequently no dividend was paid Oct., 1812. The bank purchased the State's interest, Feb., 1817, and reduced the capital to \$1,200,000. April 1, 1817, 25 per cent. of capital was paid back to stockholders, reducing the amount to \$900,000 in shares of \$75 each, and April 1, 1830, one-third more was returned, making the capital \$600,000 at \$50 per share. June 15, 1847, \$300,000 was added to the capital in 6000 new shares at \$50, making it again \$900,000, the present amount.

Boylston.—The 5 per cent. dividend, Oct., 1846, was for the first 9 months' operation. An extra dividend of 6 per cent. was paid in May, 1853. Original capital \$150,000. Increased \$50,000 in each of the years 1847-'51 and '53, and

\$100,000 in 1854.

City.—First capital \$500,000. Increased \$250,000 in each of the years 1824 and 1827. The omission of dividends in 1841-'42, was occasioned by large losses on loans to the Bangor and Piscataquis Canal and Railroad Co., the stock which was held as collateral having declined from par to almost nothing.

Cochituate.—Original capital, \$150,000. Increased \$100,000 in 1852. Bank failed April 15, 1854. A first dividend of 50 per cent. and a second of 10 per cent. on all the debts has been paid previous to this time, (Dec. 1855,) and the court has fixed upon the first of April, 1856, as the time within which all claims must be presented for proof or allowance, or otherwise they will be forever barred. It is probable a farther division will be made of a small dividend.

Columbian.—Original capital \$500.000. Increased \$250,000 July, 1854. The

dividend of 4 per cent., April, 1823, was for the first 11 months of operation.

Commerce.—Dividend April, 1851—5 per cent. for first 8 months of operation.

Original capital \$750,000. Increased \$750,000 in 1851 and \$500,000 in 1853.

Eagle.—Original capital \$500,000. Increased \$200,000 in 1853.

Eliot.—Original capital \$300,000. Authorized in 1854 to increase \$450,000, of which but \$300,000 was paid in.

Exchange.—Original capital \$500,000. Doubled in 1851. First dividend (41) for 8 months.

Freemans'.—Original capital, \$150,000. Increased \$50,000 in each of the years 1845-'49,-'51,-'53 and '54.

Globe.—Original capital \$500,000. Increased \$250,000 Dec., 1824, and in

May, 1827, to \$1,000,000, the present amount.

Granite.—Original capital \$500,000. Increased \$250,000 in 1851 and '52, and

\$150,000 in 1853 and '54.

Grocers.—Original capital, \$250,000. Increased \$50,000 in 1850, \$200,000 1853 and \$250,000 in 1854. An injunction was served on this bank Nov. 30, 1855, and the decision of the Court is postponed to March 7, 1856. The bank will probably be wound up.

Howard.—Original capital \$500,000. Authorized to increase \$250,000 in 1854,

but not paid in.

Market.—Original capital \$500,000. Increased to \$1,000,000 June 1, 1836. Reduced to \$800,000 April 11, 1839, and March 25, 1841, again reduced \$240,000, making the present capital \$560,000, divided into 8000 shares of \$70 cach. last reduction of 30 per cent., when the par was cut down from \$100 to \$70, was a clear loss to the stockholders.

Massachusetts.—Original capital July 5, 1784, \$300,000 (authorized), of which only 253,500 appears to have been paid in, according to the old records, and reduced to \$100,000 the next year. Then increased to \$200,000 June, 1791, \$400,-000 July 1792, \$800,000 Dec. 1807, \$1,600,000 June 1810, and reduced to \$800,000 the present capital, April 1821, making the par value \$250, which was originally \$500. A short history of the early days of this bank will be found on the thirty-fifth page.

The following extra dividends have been paid by this bank, and as some of them are out of the usual course we give them as described in the records of the

Nov., 1790, 11 per ct. on \$100,000 capital, "arising on the purchase of withdrawn shares and former profits.'

July, 1792. 16 per cent. on \$400,000 capital, "arising from old balance of profit and loss, sale of United States bank shares, funded 6 per ct. stock, &c. &c."

June, 1793. A balance of \$1400 from the same source as the last.

Jan'y, 1795. \$10,000 from sale of old banking house located in what is now called Hamilton Place, opposite Park Street Church.

June, 1801. 21 per cent. extra dividend.

Sept. 1812. 2 per cent. was paid and the time of regular payment changed

from January and July to April and October.

Mechanics.—Located at South Boston. Original capital, \$150,000. Reduced to \$120,000 March 1844. Increased \$30,000 in 1850, and \$50,000 in each of the years 1853 and '54.

An extra dividend of 163 per cent. was paid in May, 1850, and 124 per cent.

in October, 1854.

Merchants.—Original capital \$500,000. Increased to \$750,000 April 1832, \$1,500,000 July 1836, \$2,000,000 April 1839, \$2,500,000 April 1845, \$3,000,000 April 1846, and to \$4,000,000, the present amount, Oct. 1853. The last \$1,000,-000 was added under the provisions of the General Banking Law of this State. The reduced dividends in 1843 and '44, not only of this bank but of most others, were in consequence of the great abundance of capital at cheap rates of interest. Discounts were made at three per cent., and the banks were troubled to obtain sufficient good paper even at that low rate. This bank issues no bills under \$5.

National.—Original capital \$300,000. Increased \$450,000 in 1854.

North.—Original capital \$500,000. Increased to \$750,000 Oct. 1, 1828. An increase of \$150,000 was authorized in 1853, but not accepted.

North America. Original capital \$500,000. Increased \$250,000 in 1853. The dividend for April, 1851, (31) is erroneously reported as 3 per cent. in the "Bank Abstract" of that year.

Shawmut.—Original capital \$500,000. Authorized to add \$200,000 capital in 1853, but not accepted. Increased \$250,000, July 1854, when an extra dividend of 8 per cent. was paid. Originally chartered as the "Warren" bank, but changed to Shawmut, April, 1837.

Shoe and Leather Dealers.—Original capital \$500,000. Increased \$250,000 Oct. 1849, when an extra dividend of 10 per cent. was paid, and again increased \$250,000 July 1, 1851.

State.—Original capital \$3,000,000, at a par value of 100 per share. In April, 1817, \$1,200,000 was paid back to the stockholders, reducing the capital to its present amount, (\$1,800,000,) divided into 30,000 shares of \$60 each.

An extra dividend of 5 per cent. was made, Oct., 1836, being the proceeds of

Suffolk.—Original capital \$500,000. Increased to \$750,000 in 1826, and in 1838 to \$1,000,000, by a stock dividend of 331 per cent., thus giving to each of its stockholders one new share for every three old ones. The Foreign Money Department of the Suffolk has made it a very profitable concern, and enabled it to pay 10 per cent. annually for a number of years. Previous to assuming that business its dividends were quite moderate. March 24, 1852, a defalcation

was discovered, by which a loss of \$214,500 was made, but the surplus was so large, that the usual dividend, due in a few days, was delayed less than three weeks, only until the accounts could be examined.

Traders.—Original capital \$500,000. Reduced to \$400,000 in March, 1844, by

cancelling shares, and increased to \$600,000 in June, 1851.

Tremont.—Originally Manufacturers and Mechanics, but changed to Tremont, March, 1830, when the first capital, \$750,000, was reduced to \$500,000. This

was doubled in 1850 and increased \$250,000 more in 1853.

Union.—This bank appears to have originated (1792) from what was called the "Tontine Association," and started with a capital of \$1,200,000, one-third of which was held by the State of Massachusetts. This was paid back in 1817, leaving the capital \$800,000, which was increased to \$1,000,000 in 1850. It was the second bank in the State.

Washington.—Original capital \$500,000, and increased to \$750,000 Oct., 1853. Webster.—"The Provident Institution for Savings," of Boston, took half (\$750,000) of the capital, at the commencement of the bank, in 1853.

[See note relating to Savings' Banks Investments, p. 31.]

### BANKING LAWS.

The following, compiled from the statutes of Massachusetts, will be found of interest to the reader:—

State Tax.—The banks of Massachusetts pay the State a tax of one per cent. per annum, half in April and half in October. Banks are required to furnish the assessors of each city or town the names of residents, with shares held by each, and any person fraudulently transferring stock to avoid taxation, forfeits half of the par value. [The same law applies to deposits of \$500 or over in Savings Banks, to Railroads, Stock Insurance, Manufacturing and other companies.]

Relating to Directors and Cashiers.—No bank can have less

than 5 nor more than 12 directors.

No one director or other officer is allowed, directly or indirectly, to borrow more than 8 per cent. of the capital, (or more than \$40,000,) and the whole board not more] than 30 per cent., unless authorized by the stockholders at a legal meeting. No person whose whole stock is pledged, shall be a director in any bank; neither can any one be a director in two banks at the same time. No cashier or any officer under him is allowed to hire money of the bank in which he is employed, neither can a cashier serve as director.

Individual Liability.—Stockholders are individually liable to the amount of stock held by them for any loss of capital from official mismanagement of the directors. Also liable for the redemption of the bills of any failed bank in proportion to the stock held by them. A fraudulent transfer of stock to avoid taxation, forfeits one half the

par value of shares thus transferred.

Bank Bills, Deposits.—Banks are not allowed to issue bills to a greater amount than 25 per cent. in excess of capital. If any bank

refuses to pay its bills in specie, on demand, the holder has claim for damages at the rate of 2 per cent. a month until paid. Banks are liable to any bona fide holder for the original amount of their bills which shall have been altered to a larger amount. Also liable for all bills in circulation signed by either the President or Cashier, and not allowed to pay out any but their own bills. No bank is allowed to pay interest on deposits to individuals.

Bank Commissioners.—No bank is allowed to discount any note, or bill of exchange, to which a bank commissioner is a party, either

as principal, surety, endorser or otherwise.

Privileges of the Commonwealth.—The banks are obliged to loan money to the State at 5 per cent., payable in 1 to 5 years, whenever asked for by the Legislature, not exceeding 5 per cent. of their capital at any one time, and all loans demanded shall not together, at any one time, exceed 10 of their capital. [Penalty for refusal after 30 days' notice, 2 per cent. per month upon the amount, to be paid into the treasury of the Commonwealth until complied with.]

The Commonwealth may subscribe for stock, in addition, an amount not exceeding 50 per cent. of authorized capital of any bank

"when provision shall be made therefor by law."

Mutilation of Bills.—Any person "wilfully and maliciously tearing, cutting, or in any other manner damaging and impairing the usefulness for circulation of any bank bill," is liable to a fine of \$10 for each offence.

Imitation Shop Bills Prohibited.—Any person who shall "engrave, print, issue, utter or circulate any shop bill or advertisement," having the appearance of a bank bill, is liable to a fine of \$50 for each offence, or 90 days in jail, at the discretion of the court.

GENERAL BANKING LAW.—All the banks in Massachusetts have special charters, and although a general law was passed by the Legislature in 1851, thus far no bank has been organized under its provisions. The Merchants Bank of this city was authorized in 1853 to increase its capital \$2,000,000 under this law, \$1,000,000

of which was paid up in October of that year.

BANK MEETINGS.—The laws of this State require that the annual meetings of the stockholders of banks, for the choice of directors, shall be held in the month of October, and that in case there is more than one bank in any city or town, the meetings shall be held on different days, beginning on the first Monday in October, and continuing on successive days, taking the banks in the order in which they are arranged in the Bank Abstract, published by the secretary of the Commonwealth for the preceding year; and if from any cause the names of any banks are omitted in the Bank Abstract, such banks shall hold their meetings in the order of the dates of their charters, after the banks included in the Abstract have held their meetings. In Boston, the number of institutions being 37, a part of the meetings consequently run into November.

SALES OF STOCKS AT AUCTION.—Stocks were sold at public auction in 1835, and subsequently by Stephen Brown, B. Winslow, and

694

occasionally by others; at a later day by P. P. F. Degrand, Cook and Gale, and at present only by Messrs. Brown. The sales by auction were formerly very large, especially of bank stocks, this class being pressed upon the market as railway property has more recently been.

The Brokers' Board was established in 1834, but their transactions were not made public in the papers of the day, as now, until 1844.

FORGED CHECKS.—Our banks have occasionally suffered by forged checks, but the precautions more recently adopted have rendered this game a hazardous and difficult one. Some five or six years since the North Bank paid a forged check to the tune of nearly \$4,000, which, we believe, was never heard from.

Counterfeit Bills.—Counterfeiting has received a check from the organization of a society for the detection of counterfeiters, and the circulation of counterfeit bills has a short run. Formerly, as soon as one got into the Suffolk Bank, it was recorded, as also the bank from which received and depositor of said bill, in order to facilitate the tracing of its future movements. This plan was found to work well for a time, but the number of counterfeit bills rapidly increasing, the labor of recording became burthensome, and a law was passed permitting any bank to stamp the word "counterfeit" on all such bills, adding the "name of the bank and the initials of its officer by which such writing or stamp shall be made." It is related that one of these bills unstamped, as the plan formerly was, made its appearance a second time at the Suffolk, when its history was given to the holder, who repaired to the individual to whom it had been previously returned, when it was immediately redeemed, although it had passed through several hands.

### BROKERS' BOARD.

The first meeting to organize the "Boston Stock and Exchange Board," was held October 13, 1834. Thirteen persons were present, and all but three (R. B. Schenck, Sam'l Dana, and P. P. F. Degrand) are now living; eight still continue active members of the board. In May, 1844, the number had increased from 13 to 36, and in 1855 to 75, of whom about 50 meet daily for the transaction of business. The balance are mostly those who were once active members and still continue their connection, (by paying \$10 annually,) although now engaged in other business.

The original members assessed themselves \$100 each, and that was made the initiation fee; afterwards advanced to \$200, and again increased, Jan. 19, 1853, to \$400, the present rate.

On removing from the old quarters in the Merchants Exchange to the present board room in the Union Building, March 26, 1853, a

collation was provided, and this pleasant feature has been kept up since, at the return of each annual election of officers in September.

In the early days of the Board it was not unusual for them to meet without transacting any business, and in 1844 the publishing of the sales in the daily papers was first commenced, ten years after the organization.

Several of the members of the Board officiated as stock auctioneers, and as this was considered to interfere with the business of the Board seriodsly, it was voted, in March, 1848, that

"Any member of the Board who shall attend a public sale of stocks, or who shall, directly or indirectly, buy or sell at such sale, shall vacate his seat at the Board, unless it be done by special permission of the Board, or when the sale is made by order of executors, administrators, trustees or corporations."

As a natural consequence the stock auction business became very much reduced, as members preferred retaining their seats at the Board, where the facilities for buying and selling stocks are of great value, forming as they do a complete system for transacting the business.

BROKERS' COMMISSIONS.—The regular commission for buying and selling stocks is 1 per cent. on what is usually considered the par value, and any member who does business at a less rate, is liable to "suspension during the pleasure of the Board."

### SAVINGS INSTITUTIONS.

The following statement of the five Savings Banks, of Boston, will show their past success, and may be deemed a fair criterion, we presume, of what other similar institutions in the State have realized:—

|                                     |       |         | TION FOR SAVINGS.     | BANK.                  |
|-------------------------------------|-------|---------|-----------------------|------------------------|
| Commenced operations, -             | •     |         | 1816.                 | May 1, 1833.           |
| Regular rate of Interest, -         | -     |         | 4 per cent.           | 4 per cent.            |
| Last five years, extra dividend and | l whe | n paid, | 20 pr. ct., July, '52 | 20 pr ct., April, '53. |
| Amount of last extra dividend,      | •     |         | \$430,000             | <b>§</b> 121.309       |
| Total deposits, October, 1855,      | •     |         | <b>\$5,128,080</b>    | \$1,961,921            |
| Number of depositors, October, 1    | 1855, |         | 27,381                | 7,738                  |

The East Boston Savings Bank went into operation January 17, 1849, and made an extra dividend of 20 per cent., July 19, 1854. The regular rate of interest is 5 per cent. Deposits, October, 1855, \$68,383; and depositors, 416.

The Suffolk paid its first extra dividend (20 per cent.) April, 1848, and the Provident Institution — per cent. in 1822. In 1827, \$46.05 on \$500 for 5 years; '32, \$45.85; '37, \$47.57; '42, —, '47 and '52, 20 per cent. each. [The extra dividends could not be obtained from the bank.]

The Provident Institution for Savings was the first of the kind in this State, and with one in Philadelphia, commenced the same year, the first in the country. The first in New York opened in 1819.

FIVE CENTS SAVINGS BANKS.—These are a new feature and give promise of good success. By receiving sums so small they enable almost every one to save something for the future, and encourage habits of economy and prudence, especially in the younger portion of the community. An average of about one seventh of the depositors are under five years of age.

The condition of the two five cent banks of this city, up to October, 1855, was as follows:—

Boston Five Cents Savings Bank, - 8000 - \$450,000 People's Five Cents Savings Bank, - 2006 - \$102,311

The People's commenced April, 1854, and the Boston, May 1. Regular rate of interest 5 per cent. Extra dividends are to be made every five years, computing from May 1, 1854, for the Boston, and the first Wednesday of November for the People's.

SAVINGS BANKS INVESTMENTS.—Savings Banks, in Massachusetts, are now allowed to invest but 10 per cent. of their deposits (and in no case over \$100,000) in the capital stock of any one corporation. And any bank that may have so invested a larger amount, is required to reduce the same to the above limits, within twelve months from May 3, 1855.

### THE FOREIGN MONEY PAR SYSTEM,

Now called the "Suffolk Bank System," was begun early in 1825, by an "Association" of five city banks, the Eagle, Globe, Manufacturers and Mechanics, (now Tremont,) State and Suffolk, which were then nicknamed the Holy Alliance. One person was chosen by each bank "to be a committee with full powers to superintend and manage the operations, and regulate the compensation of those employed." This committee appointed an "agent" to receive and credit the amount of foreign money taken by the "Associated Banks," of their customers, and keep a distinct set of books for that purpose. All expenses and losses which might arise were to be borne by the five banks, in proportion to the amount that each should receive on deposit. At one time, the aggregate amount received by one of the five associated banks, had risen to \$269,640, being more than a third part of its whole capital stock, (\$750,000,) and a dead deposit, on which nothing was realized until collections began to be made from the country banks. These collections were then a slow process, not being made oftener than once in several weeks by special messengers. By means of the present railroad and express facilities, immense sums are exchanged daily. Had any one of the

above banks fallen back during the early days of the struggle, of which there was some fear, the experiment would have been abandoned. There was great opposition to it from many quarters, both in and out of the city. The then president of the Suffolk Bank, among others, doubted the power of the association to go on, and sold out his stock in that bank.

After the success of the system had been placed beyond a doubt, the Suffolk Bank assumed its exclusive management, the other members of the association each agreeing to leave with that bank, a stipulated sum on deposit, without interest.

The whole amount so deposited was \$300,000; but from time to time, as the country banks came into the system, and made their deposits at the Suffolk, those of the associated banks were gradually very much reduced.

The Suffolk redeems at par the bills of all New England banks, which make a deposit with them, (say from \$2000 to \$5000 each, according to the amount of their capital,) which is a great public convenience, and also a saving to the country banks, as they are enabled to transact business with a much smaller supply of coin in their vaults, than would otherwise be necessary. The Suffolk, also, reaps great benefit, as the plan furnishes that bank with more than \$1,000,000 working capital, without any other cost than the salaries of the large number of clerks employed in counting and assorting the immense circulation which daily passes through it.

In this connection we give a statement showing the great increase, since 1834, of the foreign money which is redeemed by the Suffolk Bank, now amounting to very nearly the immense sum of \$350,-000,000 annually.

| March, | 27,264,311   | June,  | 28,107,764   | Sept., | 29,124,271    |       | 32.625,380   |
|        | •            | ſ      |              | ' To   | tal for 1855. |       | £350,055,710 |

The receipts of foreign money at the Suffolk, Oct. 26, 1855, (the 25th being observed as a holiday,) were \$2,059,928, the largest sum received on any previous day, being \$1,700,000.

The circulation of the banks in the New England States is about \$50,000,000, and the redemption by the Suffolk nearly \$350,000,000; consequently the bank issues are redeemed about seven times every year at one point, besides ordinary redemption at their own counters.

The "Bank of Mutual Redemption," designed to take the place, in part, of the Suffolk, was chartered in 1855, but has not yet commenced operations.

### CURRENCY IN THE COLONIES.

In the absence of gold and silver, the colonists were obliged to use other articles as a circulating medium, and corn and tobacco were employed in some of the States; but as the precious metals became more plenty, the barter custom was done away with, and was pro-

hibited by Virginia in 1645.

The First Mint established was in Maryland, in 1652, and coined shillings, sixpences, and half-penny pieces. [The United States mint was established in 1791, at Philadelphia, being the only one in operation till 1838, when branches were established]. In all the colonies the money of account was English, but the coin was chiefly Spanish and Portuguese. The different colonies established different values however to the dollar, which have continued to this day. The first paper money was issued by Massachusetts, in 1690, amounting, in 1749, to £2,200,000, and had then depreciated to eleven cents on a dollar, at which figure it was principally redeemed. Pennsylvania first issued paper money in 1723, and Virginia at a later day.

ORIGIN OF THE OLD CONTINENTAL MONEY AND ITS DEPRECIATION.—At the commencement of the war, money was issued upon the authority of Congress, called Continental money. The bills passed for nearly their declared value until towards the end of 1777, when the issue had increased from \$900,000 to about \$26,000,000. In April, 1778, it was \$30,000,000, and the depreciation as six to one. About this time the alliance with France was made, and confidence being greatly restored, the depreciation was but four to one, although the issues had increased to \$45,000,000; in February, 1780, as thirty to one, the amount being \$115,000,000, and in 1781, \$1000 of this money would not produce one dollar in coin!

In 1799, Washington said that "the depreciation had got to so alarming a point that a wagon load of money would scarcely purchase a wagon load of provisions." Such, however, was the cur-

rency in which the men of the revolution were paid.

The whole issue was about \$360,000,000, and the largest amount out at any one time \$200,000,000. May 31st, 1781, it ceased to circulate as money, but was afterwards bought on speculation, at various prices, ranging from 400 to 1 up to 1000 to 1. The effect of this failure of the currency was to bring into circulation specie which had been largely hoarded up, and to foster a strong prejudice against paper money.

### BANK OF NORTH AMERICA.

The first institution chartered upon the specie basis, or conversion of bills into coin on demand, was the bank of North America, at Philadelphia, which owed its origin to the genius of Robert Morris, Esq., then superintendent of public finances. It was chartered with a capital of \$400,000, May 26, 1781, by Congress, which pledged itself to support the institution. Until October not more than \$70,000 had been taken up, but soon after subscriptions came in more freely, and the government taking \$254,000, (the balance then in the treasury,) the United States became the principal shareholder. In December, Congress created the subscribers a corporation forever, under the title of "The President, Directors & Co. of the Bank of North America," which was restricted from holding property exceeding in amount \$10,000,000.

The bank commenced operations Jan. 1, 1782, and afterwards received a charter from Pennsylvania, which was repealed in 1785, the bank continuing business under the original charter from Congress. In 1787 Pennsylvania renewed the charter, but restricted the holding of property to \$2,000,000. It has proved a very profitable concern, and its earliest dividends ranged from 12 to 16 per cent.

Difficulty of establishing the Bank's credit.—At the commencement of this bank the continental money experience was still fresh in the minds of the people, consequently great difficulty was encountered in giving currency to its notes. The people could not be made to believe that the bank had coin or could redeem its bills on demand. The bank, therefore, employed persons about town to go and get silver in exchange for its notes, made great public display of its specie, and during bank hours, kept men raising and lowering boxes, supposed to contain coin, from the banking room to the cellar, and vice versa. By the like contrivances it finally gained the reputation of having large quantities on hand, and after a time its bills obtained good circulation.

SMALL LOSSES.—LARGE DIVIDENDS.—During the last five years, (by official report,) this bank lost, from bad debts, but \$1,370. The stock is now worth 50 per cent. advance, and pays nearly 10 per cent., even at this enhanced price. The present capital is \$1,000,000.

We present, in this connection, the early history of the Old Massachusetts Bank—as it is familiarly called—which cannot fail to be of interest, commencing, as it does, the banking finance of this State.

\* A bank, not on the specie basis, was established in South Carolina in 1762. It issued £48,000 to be let at interest, and sunk at the rate of £4,000 a year.

### MASSACHUSETTS BANK.

This was the second bank in America and the first institution of the kind in this State, receiving its act of incorporation Feb. 7, 1784. During the whole period of its existence (seventy-two years) the number of different presidents has been but nine and cashiers eight, the present incumbent having been in office twenty years in succession.

Among its original officers were some of the most eminent men of the day. The president was entitled to the honor of LL.D., and seven of the directors and the cashier were distinguished as *Honorable* in the printed lists.

The following are the names of the presidents and cashiers of the

bank since its establishment in 1784:-

 ${m Presidents.}$ Cashiers. James Bowdoin, - 1784 to 1786 | Saml. Osgood, - - 1784 to 1785 Wm. Phillips, - - 1786 " 1797 Peter Roe Dalton, - 1785 " 1792 Jonathan Mason, - 1797 " 1798 John Lowell, - - 1792 " 1793 - 1798 " 1804 <sup>1</sup> James Thwing, - 1793 " 1814 Saml. Eliot, Joseph Head, - 1814 " 1816 Wm. Phillips, Jr., - 1804 " 1827 Wm. Parsons, - - 1827 " 1836 | Chas. P. Phelps, - 1816 " 1817 Jonathan Phillips, - 1836 " 1840 Saml. Payson, - 1817 " 1836 Wm. Parsons, Jr. - 1840 " 1847 James Dodd, - - 1836 " -John James Dixwell, 1847 " -

Location of the Bank.—Its Commencement.—The bank was at first located opposite Park Street Church, near what is now known as Hamilton Place, and was kept open for business during the hours from 10 to 1, A. M., 3 to 5 o'clock, P. M., excepting holidays. The bank was opened for business, July 5, 1784, and on that day the discounts amounted to only \$19,645. The original charter was perpetual, but in 1812, by consent of the bank, it was changed to a specific term like all other banks in the State. In April, 1792, the bank purchased the property then known as the American Coffee House, in State Street, for the sum of fourteen hundred and fifty pounds, Colonial currency, (about \$4,828,) and removed to the site it now occupies, on which the present edifice was erected, in 1836.

Early customs.—In those olden days, banks were instituted by wealthy capitalists, to loan their money. The President, Directors & Co. were money lenders, not borrowers, and the bank parlor in which sat these financial potentates, was approached with all the respectful etiquette imaginable; whilst all persons doing any business with the bank remained with head uncovered.

Punishment in olden times.—Forgery and counterfeiting were punished then in a different manner from that of the present day, and we find that in April, 1784, one James Trask, for passing counterfeit notes of hand, was sentenced "to stand one hour in the pillory;" and for another fraud of the same kind, to be whipped thirty stripes; and being unable to pay treble damages, to be sold for the term of four years.

### STOCKS INSURANCE

This class of securities is less known or familiar to the public than either railroad or bank stock. It has its special patrons who keep their eye upon it, estimate its value, and take up what little offers in the market. Insurance stocks rarely assume a speculative character, and are no particular source of profit to the gentlemen comprising the Board of Brokers. There is always an idea of extra hazard attaching to Insurance in the eyes of those not acquainted with the history of there institutions. It will be seen in referring to the dividends paid by the Boston Companies, for the whole past 25 or 30 years, that it has generally been a lucrative investment.

Fire Insurance—we speak of Boston risks—has decidedly improved of late years; and the Firemen's Co. of this city, which was below par in 1842, is now 100 per cent. advance, or 60 for 25, the par value. Marine Insurance, on the contrary, has been a losing business for many years, as will be seen by the note as to Insurance profits following the dividend tables.

COMMONWEALTH INS. Co.—The capital stock of this concern (\$300,000) was invested in the Commonwealth Bank, \$250,000, and \$50,000 in the Middlesex Bank. course, it failed when those basks burst up, and is practical evidence of the unwise policy of putting "all the eggs in one basket." \* The Massachusetts Fire and Marine changed its par from 371 to 100 in 1839.

Insurance stocks were, some of them, badly depressed in the latter part of 1853 and 1854, in consequence of heavy marine losses during those years. This class of stocks is the most difficult of any to obtain reliable quotations of, and more especially within a few years past. They are seldom quoted in the market, and are liable to large directed for months. A stock quoted at par one day, may not be worth more than 80 to 80 per cent, the next, if, in the mean time, a loss of several hundred thousand dollars should fall upon the different offices, to which they are of course liable at any moment. At one time in 1854 more than half a million losses in State Street, on marine insurance, were reported the same week. Fire Companies have been more fortunate in their risks of late years, and the market value of the property consequently better sustained.

• Ex-dividend. In The detail of prices each month of 1855 will be found in the Appendix.

† Merchants, on the mutual plan, 1846.

t From capital stock. † Suffolk rechartered in 1518, since which only, the dividends are given. Neptune, 20 per ct. extra, May, 1850. The 50 per ct. in Oct., stock.

Franklin Ins. Co.—This Company made an additional dividend of 3 per cent., in April, 1842, which, making three dividends in that year, could not be given in the tabular form, but is included in the total at the end of the table.

Enor.—Originally incorporated, Feb. 16, 1849, as the "United Interest." Insurance Company, with a capital of \$100,000, in shares of \$100 each. Feb. 7, 1850, the par was altered to \$50. The charter required their place of business to be "located and kept south of Bedford Street," and operations were commenced Feb. 1, 1851, in the "Liberty Tree Block," corner of Washington and Essex Streets. Feb. 11, 1852, the Legislature changed the name to Eliot, repealed the restriction as to location, and the office was removed to Kilby Street, July 1, 1852.

MANUELURES.—The dividends were paid June and Dec., up to 1829, when only 5 per cent. for that year was divided in October; and then 5 per cent., Dec. 1830; all since in April and Oct. Dividends, in addition to those in the table, were made, Dec. 1831, 4 per cent., and Jan., 1833, 6 per cent., both included in the total. April, 1842, capital increased from \$300,000 to \$400,000, by a stock dividend of 334 per cent, thus giving to every holder of three shares an additional one. This dividend was better than cash, (an unusual feature in most stock dividends.) as the new stock was worth about 20 per cent. premium, when first issued,—making the dividend equal to a cash one of 40 per cent.—and

advanced to 125 and 130 per cent. very soon after. Although so successful in late years, it will be seen that the first 84 years of its operation, the annual dividends averaged less than 44 per cent.! Since, however, the average has reached nearly 16 per cent.

MERCHANTS.—Conducted on the mutual principle from Oct. 1, 1844, to Dec. 31, 1845, and in part mutual a portion of 1846, during which time the dividends were much smaller than previously or afterwards. Several other companies also adopted the mutual principle about the same time, but without success, except in the case of the Warren. In 1836, the capital was increased from \$300,000 to \$400,000 by a stock dividend of 33½ per cent., and again in 1838, by a 25 per cent. dividend, to \$500,000.

NATIONAL.—Authorized capital originally \$1,000,000, but only \$500,000 was called in. The first dividend was paid November, 1833; all since, April and October.

NEPTUNE.—Originally the Charlestown Fire and Marine Insurance Company, but removed to Boston and adopted the name of "Neptune" in June, 1831—less than four months from its commencement—and capital then increased from \$100,000 to \$200,000. The first two dividends (1834) were paid January and December; all regular ones since, April and October. Additional dividends, January, 1840, 6 per cent.; June, 1842, 10; May, 1844, 15; January, 1845, 15; May, 1850, 20 per cent.; and are all included in the total of the table to which they properly belong. In 1850 the capital was increased by a 50 per cent. stock dividend, from \$200,000 to \$300,000. Previous to this, the shares were selling at about 190 per cent., and the new stock was worth 40 per cent. premium, making the 50 per cent. stock dividend actually worth \$70 in cash—which, with the dividends of 10 per cent. in April, and 20 in May, gave the stockholders one hundred per cent. in dividends for the year 1850!

NORTH AMERICAN.—Commenced at East Boston, but removed to the city proper in March, 1853. First dividend, of 41 per cent., was for nine months. The July (1855) dividend was for five months, the time of making up the semi-annual accounts being changed from the close of June to May 31.

SHOE AND LEATHER DEALERS.—A new company, capital \$100,000. Operations commenced Aug. 8, 1855, when \$50 per share was called in. Located at 57 Hanover Street.

Suppole.—Originally chartered in 1803, but we have been unable to obtain the dividends paid previous to the re-charter in 1818. The first after that was paid February, 1819; all since, April and October. An extra one of 2 per cent. was paid January, 1836, which made the dividends average exactly 8 per cent. for the previous ten years. Capital originally \$300,000, at a par of \$33\frac{1}{2}\$. Cut down in 1840 to \$225,000, and the par made \$25, which was soon after changed to \$100, by making every four shares into one.

TREMONT.—Two extra dividends were paid in 1844—10 per cent. in August, and 10 in December—making 35 per cent. divided within the year, although the table shows only 12+3, those being the amounts at the regular time of declaring, May and November. The dividend for 1846 was made in February. This company was conducted on the mutual plan from 1845 to 1849, which will account for the small dividends at that period.

The company commenced winding up its affairs in 1851, and paid a dividend of 75 per cent. from the capital stock, Jan. 15, 1852; another of 12½, Nov. 1st; and 5 per cent., October, 1854; making 92½ per cent. returned to stockholders. It is probable that another and final dividend of 2½ to 5 per cent. will be paid, the precise amount being uncertain in consequence of a pending lawsuit.

UNITED STATES.—Original capital \$300,000, but reduced to \$200,000 in 1826. Dividends paid January and July, previous to 1840; since then, June and December, except the dividend for 1855, in November.

WARREN.—The first dividend in the table was made Jan. 9, 1837; that of 1840, Nov. 6; the second of 1842 and 1843 in Sept.; the one in 1847, July; and 1849, Jan. All others, April and Oct. Dec., 1842, 4 per cent. extra was paid, making three in that year. Two cash dividends were also paid the assured on their premiums, in 1843 and 1844, of 3 and 6 per cent., when the company was conducted on the mutual principle; stockholders first receiving 6 per cent., the bal-

ance being divided equally between them and the assured. Original capital, \$100,000; but increased \$25,000, May, 1843, and \$25,000, May, 1844.

Insurance Profits.—The profits of insurance companies are from two

INSURANCE PROFITS.—The profits of insurance companies are from two sources: the gains in their business, and the investment of their capital. For example, supposing an office to have its capital invested in bank stock paying 8 per cent.; the company would only have to earn 12 per cent. net, over office expenses, to make an annual dividend of 20 per cent. And, on the other hand, were it to carn only enough to pay office expenses, it could still pay 4 per cent. semi-annually from investment of its capital, It is, therefore, a principal item with an insurance company to have its capital profitably invested.

Large as the dividends have in some cases been, the profits on marine risks, taking three of our best Boston offices as a test, have not exceeded, for the past 30 years, four per cent. annually on capital stock. The extra profits have been realized from investment of capital. Had the dividends on this class of risks depended on the profits thereon, they would have been exceedingly small, even with the best paying offices. A State Street office, which declared 20 per cent. dividends for several years, made but 4 per cent. on its marine, and 6 per cent. on its fire risks—

the remaining 10 per cent. being earned by its invested capital.

MARINE OFFICES.—The actual business of three of the Boston insurance companies, confined solely to marine writing, from 1826 to 1853, shows average dividends of 9 642-1000 per annum. Of this, 7 247-1000 per cent. was derived from interest on investments, leaving a net profit of only 2 395-1000 from marine insurance. Since 1853, the marine losses, as is well known, have been unusually severe, and had these years been included in the above statement, the profits from this source would have shown even a smaller percentage. It is stated that the enormous sum of \$18,972,092 74 was absorbed in marine losses, by the insurance companies of Massachusetts and New York, during the disastrous year of 1854.

DARK TIMES.—During the bank troubles in 1837 and following years, the insurance companies sustained a serious loss from bank failures, and reduction of capital consequent upon losses—the long period of very small dividends by the banks, and, in some cases, none at all; the capitals of these companies being very largely invested in bank stock. In 1843, the amount thus invested was

\$4,708,410, out of \$7,170,000 capital.

CLOSING UP OF COMPANIES.—Several companies closed business between 1841 and 1844; and, generally, quite well. The Atlantic, in March, 1843, sold a quantity of bank and railroad stock, and gave notice that a dividend of 80 per cent. would be allowed any stockholder purchasing, in part payment for the stock

purchased.

In April, the New England Insurance Company sold a large lot of bank and railroad stocks. Among the same were 400 shares of Suffolk Bank, which brought from 15% to 16 per cent. advance. Stockholders were reminded that a dividend of 65 per cent was due, which would be received in part payment for any stock purchased,

The Insurance dividends, as well as all others, are from official records.

### STOCKS. MANUFACTURING

This class of securities may be termed an "exclusive" one; for it is almost exclusively in the hands of certain capitalists, who have no desire to sell, when it is up, and exceedingly difficult to obtain reliable quotations of.

We hear little said of the immense of second in stray shares or in case of executors' sales, is the most variable stock of the lists, and exceedingly difficult to obtain reliable quotations of.

We hear little said of the immense losses incurred by this class of stocks, although many now sell below 75 cents on a dollar and some would not bring 50 per cent. The small amount thrown upon the market and the strength of parties holding them, prevents even further depression, which would occur, if subjected to the same ordeal corporation, (as the par is generally \$1000.) prevents the market from being supplied with what is technically called "floating stock," and completely exempts the securities from any speculative activity.

The value of this property as a dividend-paying security can be estimated by examining our list of dividend returns made to stockholders for a series of years. Manufacturing companies have had their fat and lean periods, and the latter have sometimes been very lean indeed; whilst the former, in some cases, have been quite plump, as, for instance, in 1843 and '44.

### NOTES TO MANUFACTURING DIVIDENDS.

Annual Meetings.—These are held at the location of the mills, when out of this State; and those of the Massachusetts companies are all held in Boston, excepting the Bartlett and James at Newburyport, Naumkeag at Salem, and

Salisbury at Salisbury.

Amoskeag.—This was originally a Land and Water Power Company, and did not commence manufacturing until some years after its incorporation. cern has generally been very successful, and has a large surplus, besides having invested considerable amount of earnings in the crection of mills, and otherwise extending its business facilities. Original capital, \$600,000. Increased at different periods up to \$3,000,000. Stock dividends were made in 1846, '47 and '49, of 25, 25 and 20 per cent.

Appleton.—Original capital, \$500,000, and increased \$100,000 in 1839, by the 20 per cent. stock dividend in the table for 1838, which was not actually paid

until Jan. 7, 1839.

Bartlett.—Original capital, \$90,000. Increased to \$200,000 in 1839, and to

\$350,000 in 1840. First dividend paid in January.

Bates.—Originated by a 40 per cent. stock dividend from the Lewiston Falls. Company. First capital \$400,000. Increased to \$800,000 up to July, 1854. Bay State Mills.—Original capital, \$1,000,000. Increased to \$1,600,000, April,

1850, and to \$1,800,000, March, 1851.

Boott Cotton Mills.—Dividends paid February and August, until Nov., 1851. Boston.—Established at Waltham in February, 1813, with about 1700 spindles, and a capital of \$100,000. This mill, still in operation at Waltham, was proba-

bly the first one in the world that combined all the operations necessary for converting the raw cotton into finished cloth. The mills in this country then were spinning mills, only; and in England, though the power-loom had been introduced, it was used in separate establishments, by persons who bought, as the hand-weavers had always done, their twist of the spinners.

The original capital, when fully paid, was \$400,000, at a par value of \$1000. At present it is \$450,000, par \$750. Several changes in the capital and par value have been made from time to time, which we have been unable to ascertain in detail. Up to 1830, the dividends are a per cent. on \$1000 par, and in "dollars per share" since. The first three dividends were paid annually. An extra divi-

dend of \$150 per share was made, January, 1825.

Boston Gas Light .- The first company organized in Boston for the manufacture of gas was the "City Gas Company," a joint stock concern, formed August 15, 1822, and located on Sheafe Lane, now Avery Street. In 1823, the "Boston Gas Light Company" was incorporated. Both these companies failed, the stockholders of the latter receiving \$3 30 each, in 1824, as the proceeds of the property sold at auction!

In 1826, the present works were commenced, by parties who had purchased the charter and property of the old concern; and, in 1835, the company was estabhished on a firm basis, with a capital of \$75,000. This was increased \$175,000 in 1836, and \$250,000 in 1837. In 1852, an increase of \$500,000 was granted, making the authorized capital \$1,000,000, of which but \$800,000 has been paid in. From 1826 to 1835, the property was in the hands of a few individuals, and no dividends were made. Since then, it has been a regular ten per cent. stock, the dividends being usually paid March and September, until December, 1851, when the payment of quarterly dividends (21 per cent.) was commenced. works are now in a complete state of efficiency, and managed with great skill and

economy by W. W. Greenough, Esq., agent of the company.

Boston and Sandwich Glass Company.—We have been unable to obtain the history of this company previous to 1833. At that time the capital was \$200,000; January, 1836, \$250,000; 1849, \$300,000; July, 1854, \$400,000; and now, \$500,000. In December, 1835, the company sustained a severe loss, by having a large amount of goods burnt at the "great fire" in New York, and no dividends were paid for five years. During this period the par value was changed from

\$500 to \$100, and the shares were uncurrent in the market. Regular dividends were paid from 1826 to 1833, previous to those given in the table, averaging about 10 to 12 per cent. per annum.

Chicopee.—Original capital, \$500,000. Increased to \$700,000 in 1835.

Cocheco.—The original investment of \$1,000,000 was all lost. We have been unable to obtain the dividends paid previous to 1839, and those given are not strictly official, but from a reliable source.

Columbian.—In the hands of a few individuals, up to 1846; the earnings being generally expended in building new mills, and otherwise increasing the value of the property. Five dividends were made previous to 1846, and some of them large, being in stock, as an offset for earnings put into the business.

Dwight.—Original capital, \$500,000. Increased to \$700,000 in 1844. The dividends are paid the last Wednesday in the month.

Great Falls.—Par value of shares originally (1825) \$1,000. New shares were issued in 1838 at \$400, and in 1840 at \$200. In October, 1846, an extra dividend of 25 per cent. (\$50 per share) was paid, and the capital increased from \$1,000,000 to \$1,500,000. Five dividends were paid previous to 1835—in June, 1825, March, 1826, March, 1828, and March and December, 1832-amounting to \$133,800; but the percentage could not be ascertained. The first three dividends in the table were made on \$1,000 par, and the fourth on \$400. All since on a par of \$200 per share.

Hamilton Cotton.—Original capital, \$600,000. Increased \$200,000, May, 1828; \$100,000, August, 1832; \$100,000, June, 1836; and \$200,000, June, 1839. Previous to 1846, the time of paying dividends was irregular; now, the last of

June and December.

Hamilton Woollen.—Incorporated 1831. Stock held by a few individuals. Manufactured broadcloths. No dividends declared, profits having been added to the capital. In 1843, machinery added for manufacturing De Laines. July,

1845, capital increased to \$500,000, divided into 500 shares.

The ad valorem tariff of 1846 gave such peculiar advantages for the importation, among other articles, of broadcloths, that it became impossible for the American to compete with the foreign manufacturer; and within a very few years, the business, which hitherto had been one of the most important branches of American industry, was entirely destroyed. This company, in common with others who made the article, although conducting the business under every advantage of capital, skill, and long experience, after suffering very heavy losses in 1849, abandoned the business, and changed the remainder of their machinery to De Laines.

Scarcely had the mill been put into full operation, and the company commenced doing a profitable business, when, in December, 1850, the mill was destroyed by fire, causing a heavy loss, and a serious delay in business. The mill was rebuilt, and operations again commenced, in eight months. Since then, the business has been successful, with regular semi-annual dividends from January, 1853; previous to which, but a single dividend had been declared, of 5 per cent., January, 1846. January 1st, 1851, the capital was increased to \$600,000, and the par changed from \$1000 to \$100 per share. A cotton mill for manufacturing De Laine warps, and a large printery, capable of finishing 5,000 pieces of De Laines per week, are connected with this establishment.

Jackson.—Original capital, \$315,000. Increased to \$600,000, from profits; and in 1841, \$120,000 of this (\$200 per share) was paid back to stockholders, reducing the par to \$800. October, 1853, \$100 per share was re-assessed, and a like amount in October, 1855, to meet the wants of an enlarged business; and the capital

again became \$600,000, par \$1,000.

James Mills.—Incorporated January, 1842. Manufacturing commenced in 1848. The first two dividends were made in January and July, 1845, and not included in the table. In 1847, the time of payment was changed to May and November. The annual meeting is held "on Wednesday next after the second Saturday of November."

Laconia.—Incorporated February, 1841. Commenced June, 1845. Capital, \$500,000. Increased to \$1,000,000, February, 1844.

Lancaster Mills.—Original capital, \$500,000, at a par of \$500. Increased

\$400,000 at \$400 per share, November, 1847; making the par \$450.

Lawrence.—Original capital, 1,200,000. Increased, March, 1836, to \$1,500,000. Dividends payable second Thursday in the month.

Locks and Canals.—This company controlled the land and water-power at Lowell, and manufactured all the machinery used in the mills. In 1837, the property rapidly declined, and shares fell from \$1,000 (par 500) to \$700. It recovered its value again, however, principally in consequence of large and profitable contracts to furnish locomotives for the Reading Railroad, making large annual dividends, and closed up in 1845, by dividing nearly \$1,600 per share. It passed out of the hands of individuals, and was bought by the various corporations, in proportion to their water power. They now hold it, and carry on the corporation by special act of the Legislature.

Lovell.—Up to July, 1847, the dividends were paid on a par of \$1,000. New shares were then issued, at \$750 per share, and in 1849 and '51, at \$500, making the capital \$2,000,000, and present average par about \$690. Since 1847, the div-

idends are given in "dollars per share."

Lowell Bleachery.—Commenced in 1832. Dividends previous to 1846 were somewhat irregular, and we have been unable to obtain them. The time of payment has been changed from February and August to January and July.

Lowell Machine. - Original capital, \$300,000. Increased \$200,000, March, 1847, and in May, 1848, \$100,000, by a stock dividend of 20 per cent. Dividends payable annually.

Lyman Mills.—Set off from the Hadley Falls Company, May, 1854. Each holder of one share Hadley, (par \$500,) paid \$100, receiving three shares Hadley,

(new,) and three shares Lyman, each par \$100.

Munchester Print Works.—Originally Manchester Mills, with \$1,000,000 capital, divided into 200 shares of \$5,000 each. This company was nominally closed up and sold out to the Merrimack Mills, in order to adopt the charter granted that company, by which means the privilege of an increase of capital was gained, without assuming the personal liability clause in the laws of New Hampshire governing corporations. The name of the corporation was again changed, from Merrimack Mills to Manchester Print Works. Capital increased \$200,000 in 1848, \$300,000 in 1850, and in 1852, \$300,000 by a 20 per cent. stock dividend.

The mills were partially destroyed by fire, September, 1853, and again, July, 1855. (Loss each time about \$150,000 above insurance.) They are being rebuilt, however, and will be ready for occupation early in the summer of 1856. The annual meeting can be held either in June, July, or October, but will proba-

bly be in the latter month for the future.

Massachusetts Mills.—Not in full operation until 1842. Original capital, \$1,200,-000. In 1847, the Prescott Company (\$600,000) was joined to it, and the dividend at that time was partly from the reserve fund. The dividends are paid the latter part of the month.

Merrimack.—Original capital, \$600,000. First dividend paid on \$1,200,000; then increased \$300,000 in 1827, \$500,000 in 1837, and \$500,000 in 1849. An extra dividend of 10 per cent. was paid, July, 1845. Previous to 1845, dividends usually paid May and November.

The latter dividends for 1825 and 1837 were not actually paid until the follow-

ing January, but properly belong to the years as in the tables.

Middlesex.—In the hands of private individuals, from 1830 to 1841. January, 1844, capital increased from \$600,000 to \$750,000, by a dividend of 25 per cent. from reserved profits; and August, 1848, to \$1,000,000. The annual meeting is held the "Wednesday next after Christmas."

Naumkeag Steam Cotton.—Works started in January, 1847, but all the machinery was not in operation until January, 1849. Authorized capital, \$1,000,000; paid in, \$700,000. The company have a reserve fund of \$210,000, which will soon

enable them to complete the capital by an extra stock dividend.

New England Glass.—We have been unable to obtain all the dividends paid by this company, but those given are reliable, though not official. The previous dividends were also large, many of them, and the company has generally been successful. It is the oldest Glass Company in this State, having commenced in 1818, and probably the first of the kind in the country

In 1845, the capital was \$400,000, and increased to \$500,000 by a 25 per cent.

stock dividend in 1851.

New England Worsted.—In private hands previous to 1842, and unsuccessful. Up to 1850, the dividends were paid April and October. Twelve and a half per cent. of the dividend, October, 1848, was in stock. In 1852, preferred stock was issued at \$50, and the par of the old made the same. Dividends of 4 per cent. on the preferred, July, 1853, and January and July, 1854—none since.

Otis.—The 141 per cent., in 1850, was 3 per cent. cash, balance stock.

Pepperell.—Authorized capital, \$1,000,000, of which only \$400 per share, or

\$800,000, has thus far been called in.

Perkins.—Original capital, \$450,000. Increased \$50,000 in 1840. November, 1852, the Cabot Company (\$500,000) was united with it. [There is another Cabot Company, (at Brunswick, Me., capital \$104,000, new in 1853,) which sells in the

market occasionally.]

Robbins Cordage.—Located at Plymouth. Capital, \$60,000. Commenced April 1, 1838. Dividends, annual, in Feb. 1839, '40 and '42, each 6 per ct.; '45, 3; '46, '47 and '48, each 6; '50, '51, 52 and '53, 8; Aug., '54, 5, and Feb., '55, 5 per ct. Annual meeting 1st Monday in February, at Boston.

Salisbury.—Original capital, \$208,000. Increased by appropriation of profits to \$300,000, up to 1830; \$100,000 added in 1833, \$100,000 in 1850, and \$100,000 in 1853; the last two by stock dividends. Since 1853, 61 shares were issued at \$1000, making the capital \$661,000. The dividends in the table commence with No. 4, the first cash one; previously, in stock. Those for 1850 were both in July, but could not well be expressed otherwise than as in the table.

Salmon Falls.—The dividends given are all that this company has paid, and

are made up from reliable data; but the company declined furnishing them

officially.

Stark Mills.—Original capital, \$1,000,000. Increased \$250,000, October, 1847. This mill was destroyed by fire, March 16, 1850; loss \$75,000.

Suffolk.—Original capital, \$450,000. Increased to \$600,000, August, 1838.

Dividends payable fourth Thursday in the month.

Tremont.—Original capital, \$500,000. Increased in 1837 to \$600,000, by a

stock dividend. Dividends payable same as Suffolk.

York.—Original capital, \$1,000,000. Increased \$200,000 by a stock dividend, in 1849. Ten per cent. extra was made in cash, February, 1844. Dividends usually paid February and August, until May, 1852.

### RAILROAD COMPANIES.

Thomas Gray, the author of the Railway System, was born in Leeds, England, about a century ago. He talked and wrote upon his project for "A General Iron Railway," but the people declared him insane. He petitioned Parliament, sought interviews with the lords and other great men, and thus became the laughing-stock of all England. This was in 1820, but he succeeded at last, and the world was benefited by the madness of Thomas Gray. We do not know what became of him, but up to 1846 he had been neglected, and forced by poverty to sell glass on commission for a living! It is a singular fact, also, that in the days of Robert Fulton, the hall of the United States House of Representatives was refused him, for the purpose of a lecture on steam navigation, on the ground that it was a discussion of a visionary scheme.

FIRST FREIGHT AND PASSENGER RAILROADS IN ENGLAND.—In 1828, the British Parliament authorized the construction of a railway, 321 miles in length, between Liverpool and Manchester, which

was opened for passenger and freight traffic in 1830, after the invention of the improved locomotive engine by George Stephenson, in The object of the construction of this railway, was to countervail the canal monopoly in *freight* transportation. It was not till after the act of incorporation was obtained, that the idea of transporting passengers upon this railway—and thus competing with the stage-coach monopoly—came to be considered as a prospective and feasible item of the new scheme. George Stephenson was the first to suggest the possibility of introducing locomotive engines upon the new railway, as the most economical motive power. He found no echo, however, among his professional brethren, who, to a man, opposed his evidence before Parliament, when he modestly stated his belief that such a machine could be made to carry freight at a rate of ten or even twelve miles per hour. A few months after, his engine, the Rocker, was running upon the new railway at the rate of twenty miles per hour. This was the modest commencement of the English railway enterprise; in which, fifteen years afterwards, (1845,) about £100,000,000 sterling had been invested, at an average cost per mile of not less than £35,000, or \$175,000. These, with the roads to be constructed, for which sanction had been obtained, in January, 1847, were not short of £300,000,000 sterling, or \$1,500,000,000, at an average cost of £30,000, or \$150,000, per mile.

FIRST RAILBOAD IN THE UNITED STATES.—The first railroad in this country was the Granite Quarry Railway at Quincy, Mass., built in 1827. The inauguration of the great railway movement in New England, was the construction of the Worcester, the Providence, and the Lowell Railroads. The experiment was regarded with distrust, and Boston and Worcester stock at one time went a begging at 60 per cent. At the time of the bank panic, attention was turned to the new enterprise, then in successful operation, as a class of security more exempt from hazard than monetary institutions; and the stock of the existing roads advanced in price, though temporarily

affected by the stringency of the money market.

THE RAILROAD MANIA.—Railroads soon multiplied in every direction, and became the favorite investment of the day. The enterprise now assumed a speculative character, and a railroad mania supervened, the results of which are too fresh in remembrance to need being recited. A revulsion came; and, from being the favorite security of 1840-7 inclusive, railway property has come to be regarded very much as bank stock was during the panic alluded to, and the long years of distrust of these institutions which followed. Railroads are now passing through their day of trial.

WILL RAILROAD PROPERTY BECOME VALUABLE AGAIN?—It is sometimes asked if railroad property will ever again become a paying investment, and regain its lost position? The same question was often put in regard to bank stock, during its long period of depression. Many thought it never would: and, discouraged by small dividends, or none at all, sold out at a great sacrifice, leaving to others to reap a rich harvest from their fears. A comprehensive view

should be taken of the subject. Almost every species of property is liable to panics and revulsions; and in every enterprise, however profitable and promising in the aggregate, individual cases of unsuccess and failure will occur: and whenever banking, railroad building, real estate tinvestment, or any other undertaking, assumes a speculative character, disastrous results follow. Railroads have, in many cases, been built where they were not wanted; in others, diverged from their proper course by unwise or interested counsels. Large sums have been foolishly expended, and there have been errors in calculation and management. But because of here and there a failure to meet the expectations that were formed, it does not follow that the whole railway property of New England is valueless. Our principal roads pass through a rich and populous country, and the passenger and freight movement is immense and increasing; whilst those interested are awaking to the necessity and justice of adopting a remunerative tariff, in place of the ruinously low prices that have ruled, from a foolish rivalry and competition for business. Taking a just and comprehensive view of the subject, we believe that, in due time, railroads will be re-installed in public confidence, and be classed among our safest and best investments.

It should be remembered, that the present depression in railway stocks and bonds is not peculiar to this class of property. Bank stock, as we have seen, and Government and State stocks, even, have not been exempt. New York 6 per cents. fell from 126 (in 1835) to 78 (in 1841); Ohio 6 per cents., 123½ to 48½; Penn. 5 per cents., 109½ to 40; Indiana, 105 to 16½; Illinois to 14, and Massachusetts sterling 5 per cents. from par to 84½; whilst the United States 6 per cents. would not at one time bring par; and yet Ohio, New York, Massachusetts, and Government, have always punctually paid their interest.

FLUCTUATIONS OF ENGLISH RAILWAYS.—Previous to 1849, railway stock was at a premium in England; but subsequently a ruinous reaction took place. The tide, however, again turned in their favor, although there has been a decline in prices for a year or two past. We give the following few quotations to show that fluctuations in this class of property are not peculiar to the United States:—

|                        | Par. | 1848.<br>Highest. | 1850.<br>▲pril 16. | 1852.<br>April 16. | 1855<br>December. |

| Northwestern,          |      |                   | 100                | 134                | 95                |
| Southeastern,          | 100  | 981               | 124                | 78                 | 57                |
| York and Midland,      |      |                   | 14                 | 551                | 45                |

We were unable to find quotations to fill the blanks in the above, but enough are given to show the great changes.

The average amount of capital absorbed by the English railways is given at £35,000 or \$150,000 per mile. Constructed with the wide guage about £40,000 per mile or \$200,000.

NORWICH AND WORCESTER, AND STORINGTOR.—Scattering quotations of the Norwich were given provious to 1839, as high as 102), and of the Stonington up to 109}.

prices, in their days of prosperity, which at the present time might seem fabulous. For instance, Concord (par 50) so'd at 70 or 140 per cent., the highest of any railroad stock in this market. Boston and Lowell, 135; Fitchburg, 135; Nashua and Lowell, 130; Boston and Providence, 127, and private sales reported as high as 135; Boston and Worcester, 126; Boston and Maine, 119; Michigan Central, 118; Eastern, 116; Western, 114; Northern (private sales), 108; Vermont and Massachusetts (private sales), 108; Old Colony, 109; Cheahire (old stock), 103; and Vermont Central, \$37 per share.

SPECULATIVE PRICES.—The higher prices of railroad stocks, in 1895, were generally speculative, as the roads were unfinished, and their success simply theoretical. The Harlem road, out of New York, which was not opened to Harlem till October, 1887, sold as high as 190 and then fell to 65,—all in five or six weeks, owing to a "corner" which was made,—regular quotatious ruling from 160 to 71. Norwich and Worcester, which sold at 102½, was not opened till 1840; and Long Island sold at 105 per cent, mine years before it was opened. The prices of the Worcester, Providence, and Lowell, in 1886—7, were depressed by the stringency of the money market.

THE NEW YORK MARKET.—In 1837, the New York stock market was even more seriously affected than our own by the financial crisis. The Mechanics Bank, a 138 fell to 744; Phoenix, 139 to 80; Union, 125 to 91; Manhattan, 134 to 90; Dry Dock, 165 to.—, failed. Delaware and Hudson Canal, 122 to 51; and a like stamed of almost every stock on the list. In Philadelphia, the decline of prices was subsequently most ruinous. The Bank of Pennsylvania declined from \$540 · 400) to \$100 or 25 per ot. \$60 or 12½ per cent, at one time (1842), being the highest offer. from 133 fell to 74

### NOTES TO RAILROAD COMPANIES.

Berkshire Railroad.—Capital \$600,000. No funded debt. Leased to the Housatonic Railroad at 7 per cent., payable quarterly, in January, April, July and

Boston and Lowell.—One of the most permanent 8 per cent. stocks among the railroads, until within a year or two. The par value of the shares is \$500 mostly held by rich capitalists—and they are seldom offered in the market. The

stock was at one time current at 135 per cent., (\$675 per share,) with private sales some 5 per cent. higher, and has lately sold for 60 per cent.

Boston and Maine.—Incorporated in 1833, as the Andover and Wilmington Railroad, and opened to Andover, Sept. 1, 1836. April 10, 1837, extended to Haverhill; in 1839, to New Hampshire State line; and to Dover, Sept. 24, 1841. In 1841, united with the Boston and Maine Railroad in New Hampshire, and the whole line was then called "The Boston and Maine Railroad." Opened through to Great Falls, July 24, 1843. The Boston and Maine extension, from Wilmington to Boston, was opened July 1, 1845. Shares in the Boston and Maine Railroad (so called) were sold, in 1839, at 65 dollars. The average cost of the same was about 85 dollars: some being sold by the company to stockholder for same was about 85 dollars; some being sold by the company to stockholders for \$60, \$75 and \$100.

Boston and Providence.—Original capital, \$1,000,000. First dividend paid on

\$1,250,000. The bonds mature in 1861 and 1862.

Boston and Worcester.—The first train of passenger cars which ever left Boston, was on the morning of April 7, 1834, for Davis's Tavern in Newton, to which place the Boston and Worcester Railroad was then opened. It was further opened to Needham, July 8th; to Westboro', Nov. 15th, 1834; and throughout its entire length to Worcester, July 3d, 1835. Original capital, \$2,000,000. The bonds are due in 1860, and \$400,000 of them convertible into stock at par. In 1846, a proposition was made to unite the Western and Worcester roads, rating the stock of the former at par, and the latter at 120. This was declined by the Worcester.

Cape Cod.—Opened to Sandwich, 1848, and extended to Hyannis, July, 1854. A dividend of 2 per cent. was paid January, 1849; 21, January, 1853; 2 in July; 2, January, 1854; 3 in July, and 3 per cent. in stock, March, 1855. Capital, \$600,000. Funded debt, \$180,000; due in December, 1857, 1859 and 1861.

Annual meeting, second Wednesday in July; usually at Hyannis.

Cheshire.—The old stock was preferred in 1852, by each holder of three shares paying \$100, and receiving four new shares. A very few shares of the old stock still remain out. The company have adopted the policy of reserving their income to pay off the maturing indebtedness, and issue bonds payable in 20 years

as dividends to the stockholders.

Concord.—This stock has sold the highest (140 per cent. public sales, 144 pri-

vate) of any railroad in New England, and was never below par until 1855. The annual meeting is held the "Tuesday preceding the last Wednesday in May."

Concord and Montreal.—Interest dividends, in stock, have been made on the old shares up to 1855, and regular dividends on the 6 per cent. preferred, until November, 1855, when it was passed to the credit of shareholders, but not paid. A new issue was made in 1854, on which \$1 per share was paid, May, 1855, and a like amount credited in November.

Connecticut River.—Opened to Northampton, December, 1845; to Greenfield, latter part of 1846, and to South Vernon in 1848. Of the bonds, \$5000 mature in 1856; \$15,000, 1857; \$15,000, 1858; \$135,000, 1862; and \$65,000 in 1863. Ten semi-annual dividends, of 4 per cent. each, have been paid, from February, 1851, to August, 1855, inclusive, on the preferred stock; after February, 1861, this preferred becomes common stock by limitation. Capital, \$307,500.

Eastern.—First opened to Salem, Aug. 27, 1838, with a grand festival to stock-

holders and invited guests. Opened to the public, Aug. 28, with 6 passenger trains and 1000 passengers first day, which was then considered a great number. Opened to Newburyport, Aug. 28, and connected with the Eastern in New Hampshire, Nov. 9, 1840.

Eastern in New Hampshire.—A distinct corporation, but leased to the Eastern in Massachusetts, Feb. 18, 1840, for 99 years. The stockholders receive the same dividends as the Eastern, which are given in the table. In January, 1839, however, none was paid on the New Hampshire part, which was before the lease. The annual meeting is held the "first Tuesday after the second Monday in July," at Portsmouth, N. H.

Fall River.—Merged into the Old Colony, July, 1854, by act of "consolidation," and called "Old Colony and Fall River Railroad." A stock dividend of

\$13.092 per share was paid October, 1854.

Fitchburg.—This stock has sold among the highest (135) of any of the roads leading out of Boston, and at one time was considered a safe 10 per cent. investment. Railroads in Massachusetts are prohibited from dividing over 10 per cent. among their stockholders, or probably some of the companies would have made even larger dividends in their days of temporary prosperity.

Hartford and New Haven.—One of the few New England roads, the stock of which now sells at a premium. Extra dividends, of 5 per cent. each, were made in 1851 and 1853, and another of 5 per cent. is payable January 15, 1856. The

bonds mature in 1873.

Lexington and West Cambridge.—Opened in 1846. Capital, \$240,000, half six per cent. preferred, and half common. Debt, none; the bonds having been changed into preferred stock, first and second class, \$60,000 each, on which dividends have been regularly paid from July, 1853. First dividend on the common stock, July, 1854, of 21 per cent., and same since. Annual meeting, first Wednesday in August.

Lowell and Lawrence.—Capital, \$200,000. Funded debt, \$100,000. Dividends payable annually. Five per cent., January, 1850, for 15 months; 4 per cent. in

cach of the years 1851, 1852 and 1853; and 6 per cent., 1854-'55.

Michigan Central.—'The Detroit and St. Joseph's Railroad was originally chartered in 1832, with a capital of \$1,500,000. Work was not actively commenced until 1837, however, when it was pushed forward under the auspices of the State of Michigan; and, up to 1845, the road had been opened from Detroit to Kalamazoo, (143 miles,) constructed with wooden rails, covered with flat bar iron.

In 1846, the Legislature chartered the Michigan Central Railroad, and sold this 143 miles, with the franchises of the company, to Boston and New York capitalists, for \$2,000,000, or about \$14,000 per mile. This company came into possession, Sept. 23, 1846, and immediately determined to extend the road, which spirit of progress was actively kept up until the connection with Chicago was completed. Although located in Michigan, the road is managed principally by Boston men, with the Treasurer's office here, and is practically a New England corporation, but with resources immensely superior to that of any of our roads. The income of the road in 1850 was \$691,972; in 1855, it exceeds \$2,500,000. The dividend in 1852 was 10 per cent. stock and 4 per cent. cash. They were formerly paid yearly in January, but are now semi-annual.

Nashua and Lowell.—Original capital, \$250,000, and increased from time to time up to \$600,000. An extra dividend of 4 per cent. was made in November, 1843, and another of 2 per cent., November, 1844.

New Bedford and Taunton.—Original capital, \$400,000. Increased \$100.000

from earnings, in October, 1852, by a stock dividend of 25 per cent.

New York Central.—Formed in 1853, by a "consolidation" of all the roads from Albany to Buffalo. The largest railroad corporation in this country.

New York and New Haven .- The Norwalk accident caused a stoppage of dividends; and, more recently, the Schuyler frauds, by which the company was robbed of \$2,000,000 stock, have completely paralyzed its prosperity. The shares fell from 128, the highest quotation ever reached, to 105, in consequence of the accident in 1853; and its present value is about 30.

Northern.—The dividend for 1854 was passed to the credit of holders May 27,

but has not yet been paid. It probably will be in June, 1856.

Old Colony.—Consolidated, July, 1853, with the Fall River. The capital and

bonds are those of the new company. The previous capital of the Old Colony was about \$1,600,000. In October, 1854, a stock dividend of \$22.919, per share, was paid in the new consolidated stock to holders of the old shares.

Pittsfield and North Adams.—Leased to the Western Railroad at 6 per cent., for 30 years from January, 1846, and 5 per cent. forever thereafter, or the purchase of the stock at par. When the *Hoosac Tunnel* is finished, the Troy and Greenfield Railroad is obliged by its charter to take the road off the hands of the Western, at cost, (\$450,000,) if the latter so elects.

Portland and Suco.—Leased perpetually to the Eastern, and Boston and Maine Railroads, April, 1847, at 6 per cent., with a penalty of \$200,000 on each party for a breach of contract. The lease is a source of profit, besides being indispen-

sable to the roads in question.

Providence and Worcester.—The \$300,000 bonds mature Aug. 5, 1860. An in-

terest dividend of 6 per cent. was paid in stock, March 14, 1848.

Reading.—A stock dividend of 12 per cent. was made January, 1848, and an

extra one of 8 per cent., in stock, January, 1853.

South Shore.—Capital, \$259,685, paid in. Funded debt, \$150,000. Leased to the Old Colony, at 6 per cent., from April, 1849, to April, 1854. Now run by the company. Dividends, 3 per cent., October, 1851, and 3, April, 1852; none since. Annual meeting, second Wednesday in January.

Stockbridge and Pittsfield.—Capital, \$448,700. Debt, none. Leased to the Housatonic Railroad, at 7 per cent. on cost. Dividends, 31 per cent., semi-

annually.

Stony Brook.—Capital, \$266,900. Debt, none. Completed July 1, 1848, and leased to the Nashua and Lowell Railroad for 12 years, at \$300 per annum, and 6 per cent. on the cost.; also, half the net profits in excess of the above, payable in February and August. Semi-annual dividends of 3 per cent. have been paid

regularly, except one of 34 in 1852.

Vermont and Canada.—Leased to the Vermont Central for 50 years from 1850, at 8 per cent. The last interest payment was made June 1, 1854, and the company have since taken possession of the Vermont Central, for non-payment of interest, according to the terms of the lease. The first regular dividend was paid June, 1851. Interest at the rate of 8 per cent. was paid on the amount paid in previously.

Western Railroad.—This road was opened to Springfield, Oct. 1, 1839, and through to Albany, Dec. 21, 1841. It has one grade 83 feet to the mile, for about a mile and a half; one of 79 feet, for four miles; one of 78 feet, for two miles; and one of 74 feet, for five and a half miles; in a word, it has a grade of from 60 to 83 feet per mile, for more than eighteen miles. At Washington, near the State line, the road-bed is 1,456 feet above the level of the depot in Beach Street, Boston. A single mile of the mountain section cost \$220,000.

Worcester and Nashua.—The \$200,000 bonds mature May, 1860. stock was preferred in 1852, by each holder of five shares paying \$100, and receiving six new shares; and only fifteen shares of the old stock are now out-

standing.

Railroads in New Hampshire.—In 1850, a railroad fever raged in New Hampshire, and a railway ruin was predicted—but too truly. The amount thus invested, in that State, was \$25,000,000. Number of miles of road, 834; estimated to

cost, equipped, \$30,000 per mile, on an average.

Camden and Amboy Railroad, and Delaware and Raritan Canal Company.—This road, upon which the lamentable accident occurred in 1855, has been a profitable concern. In 1850, an extra dividend of 20 per cent. was made in improvement bonds, amounting to about \$830,000, (payable in 1870,) which sold at from 91 to 95 per cent. New Jersey's share was \$40,000, she holding 2,000 shares of the stock. About ten years previous, (1840,) the company made a similar dividend of \$8 50-100 per share; the regular dividends, in the mean time, averaging from

10 to 12 per cent. The road enjoys a monopoly.

We may remark, in this connection, that the New Jersey Legislature of 1814-15 chartered the New Jersey Railroad Company; but the authors were ahead of

their times, and its construction fell through.

Railroads in Early Days.—The following is a railroad report in the days of their primitive simplicity:-

**58** 

| Boston & Providence B | R. R., | Dec. | 1, 1 | 835. | For abou  | t six months' business:- |
|-----------------------|--------|------|------|------|-----------|--------------------------|
| Whole receipts,       |        |      | •    |      | \$112,000 |                          |
| Expenses, .           |        |      |      |      |           | <del></del>              |
| Net,                  |        |      |      |      |           | \$84,000                 |
| Dividend, 4 per cen   | t.,    |      |      |      |           | 50,000                   |
|                       |        |      |      |      |           | . \$34,000               |

How beautifully simple, compared with the voluminous reports in pamphlet

form, of modern days.

CURIOUS NOTICES.—In 1834, the Worcester Road gave notice that "Passengers are not sent for by the Company, but seats are provided for all who apply at the Ticket Office." It had been customary for stages on the different routes to call for passengers, and the public expected the railroad company would send

ANOTHER.—"In consequence of the shortening of the days, the evening trip is discontinued." Another road gave notice that, in consequence of an accident to the engines, there would be but one trip a day; and another, that, for a similar

reason, the trips were discontinued for the present!

BENEFITS OF RAILROADS.—The increased value of property on the lines of our New England Railroads has been immense, and is steadily increasing. In the Western country this is still more marked, and we find by the official tax statistics of Michigan, that, through those counties where railroads have been built, the taxable property has, within three years, increased 400 to 500 per cent.; while in those counties where no railroads have been built, the ratio of increase

in value has not been over 100 per cent.

BULLS AND BEARS, OR BUYERS AND SELLERS .- The buyers, or bulls, technically termed, wish to toss everything up, as they are anxious to sell at a profit; the bears, to break them down, they having sold stock deliverable in 30 or 60 days, and therefore wish to buy in the stocks they have to deliver, at a price less than they sold them at—the difference being the profit or loss on the transaction. The bulls, or buyers, are therefore willing to listen to any favorable rumors of improvement in the money market, in the receipts of the company whose stock they hold; while the sellers, or bears, are apt to exaggerate in their imaginations the difficulties of the country or money market; each taking a view thereof in harmony with his interest, and acting accordingly. The brokers of the London Board are obliged to give bonds when elected, and are forbidden to speculate on their own account; the jobbers alone, on the outside, being the bulls or bears.

Cornering.—A term given to a system of buying up all the floating stock of any particular company, and then buying on time as much more as possible; so that those who agree to deliver at a specified period, cannot obtain the stock to complete their contracts. The seller is therefore cornered, and must submit to the buyer's terms.

### STOCKS NOT GENERALLY CALLED AT THE BROKERS' BOARD.

Boston Sugar Refinery.—Sales in 1835, from 685 to 575, for 800 paid, (par \$1,000.) Advanced to 1,455 in 1844, and receded to 7621 in 1852. In 1853, 850 to 960; 1854, 9521 to 1,055; 1855, 970 to 1,105. Subsequent sales at 1,045 to 970. Last sale at par.

SHAWMUT SUGAR REFINERY.—1854, 861 to 981; 1855, no sales.

BOYLSTON MARKET.—Par, \$100. 1835 to 1845, 173 to 140; 1845 to 1855, 182 (in 1851) to 150.

Williams Market.—1854, 30 to 16; 1855, — to 9.

U. S. HOTEL.—1845, 116 to 103. Advanced to 120 in 1846; receded to 90 in 1849, and 52 in 1855.

WINTHROP HOUSE.—1851, 801 to 65; 1854, 55 to 35; 1855, 35 to 24.

BOSTON ATHENÆUM.—Par, \$300. 1835 to 1845, 190 to 150; 1845 to 1855, 211 (in 1846) to 90 in 1854; 1855, 96 to 60.

BOSTON LIBRARY.-1835 to 1845, 20 to 13; 1845 to 1855, 13 to 54.

Boston Music Hall.—Par, \$100. 1851, — to 50, and ranged from 50 to 40 up to 1855. Sales in 1855, 40 to 35.

BOSTON THEATRE.—Par, \$1,000. 1854, 795 to 600; 1855, 550 to 495.

### SPECULATIVE BUBBLES.

Bubbles.-In England, the "South Sea Scheme" commenced in 1710, and

exploded in 1720. Shares rose to 1,000 per cent. advance.

LAW'S BANK.—Projected by John Law to pay off the French national debt. Declared a royal bank in 1718, and shares rose to 2,000 per cent. advance. Exploded in 1719, and nearly upset the French government, ruining families by thousands.

GUM ELASTIC.—In 1834-35, the India Rubber speculation inflated, shares in the Roxbury Company selling at 100 per cent. advance. Collapsed in 1836, and

tumbled from \$200 to \$5 per share.

EASTERN LAND SPECULATION.—Culminated in 1834. The seat of operations was at Bangor, which the pilgrims in quest of fortune's favors so thronged, that hardly a shed was to be had for a night's repose. When the bubble burst, it scattered ruin all around.

NEW YORK CRYSTAL PALACE.—This stock rose in 1853 to upwards of \$160 per share, and dropped in 1854 to \$5. Some, who thought the stock a transparent affair, sold out on the top of the wave, at 60 per cent. advance.

### DEFALCATIONS AND EMBEZZLEMENTS.

From time to time, the community has been surprised by alarming fraudulent operations, which have shaken public confidence, blasted the character of the

perpetrators, and indirectly ruined the fortunes of many an innocent party.

THE NEW YORK LIFE AND TRUST COMPANY lost, by a series of frauds commenced in 1837, \$349,000, or more than one-third of its capital. The stock fell to 62, but regained par the next year, 1842. Other instances of a similar nature have occurred from time to time in past years; and, more recently, we have the embezzlement at the Suffolk Bank of \$214,500, (1852); the \$2,000,000 SCHUYLER FRAUD (1854) on the New Haven Railroad; Kyle's frauds on the Harlem; the Crane over-issues (1854) on the Vermont Central; and the defaulting Treasurer of the EASTERN RAILBOAD, (1855,) by which that company suffered a loss of some \$200,000. In themselves, these various depredations would be comparatively of little importance; but the influence they naturally have upon the stock and money markets, has caused an immense amount of mischief, from the evil effects of which the community are suffering to a greater or less degree, by the sadly depreciated condition of many of the railroad and other securities, which have heretofore stood high in the public estimation.

ENGLISH DEFALCATIONS.—The Bank of England lost by the Fauntleroy forgeries, £300,000, (\$1,500,000,) of which about 25 per cent. was afterwards refunded by Fauntleroy's partners, to settle with the Bank. Young Fauntleroy

was executed in 1824.

The English bankers, Strahan, Paul & Bates, heretofore of the highest respectability and reputed wealth, failed in June, 1855, for an enormous amount, and were convicted of gross fraud, having embezzled over half a million of funds and securities deposited with them for safe keeping. They were sentenced to fourteen years' transportation, the heaviest infliction provided in the statute, and sent to

Gibraltar to work with the ordinary convict gang at that station.

This house, originally founded by a Mr. Snow, and bearing his name until a recent date, was one of the three private banking houses established before the Bank of England, which have continued in existence ever since. York Evening Post, after noticing the trial of this case, adds, with much truth:—
"No one can rise from the perusal of the foregoing brief statement of one of the most impressive and exciting trials which ever occurred in England, without feeling an increased respect for her judiciary, and the public sense of justice which sustains it. No American can read it, without a painful doubt crossing his mind, whether offenders possessing such wealth and influence as these, could be hearth to a marie to the country of the transit of the country of be brought to punishment so promptly, if at all, in the United States."

### RAILROAD BONDS.

This modern class of securities has been in high favor, as our list of prices will show. The first bonds, representing but a small part of the cost of the respective roads, the earning and prompt payment of the promised interest was deemed certain, whatever might be the fate of the common stock. The Ogdensburg, and Rutland and Burlington first 7 per cent. bonds were therefore regarded as a desirable investment at par, and touched higher figures. The interest on these, as also on the Vermont Central, was for a time promptly met; till, in the case of the former road, a large issue of second bonds, and an attempt to pay interest on both classes, resulted in suspending payment on both. The Rutland endeavored to keep up payment on a large issue of 8 and 6 per cent. preferred stock in addition to bond interest, and was brought to a stand still; whilst a complication of difficulties forced the Central Road into the same position—all three failed, and passed into the hands of the trustees for the bond holders. The Ogdensburg has already resumed payment of first bond interest, which, in the case of the Rutland, has been retarded by the outlay required to put the road in good working condition when the trustees took possession; this having been done, as per last report, resumption of first bond interest payment will not probably be long delayed. The Vermont Central has passed into the hands of the Canada for arrears of rent, and its first bonds being, in fact, but a second security, payment of interest thereon, in its present complicated position, cannot at present be expected. There is another class of bonds which have always maintained interest payment; the low price of which, compared with other 6 and 7 per cent. paying securities, can only be accounted for from sympathy with the state of the market for all railway property, however unexceptionable. What has been remarked in regard to railroad stock, applies with still greater force to most of these bonds; for the bondholders are the real stockholders till their claims are satisfied. They hold the young and growing roads, passing through productive sections of country, with valuable connections, at one half or third of what they could be economically built for and equipped; and if they cannot yield 6 or 7 per cent. on this small sum, our best roads, at their twofold or triple cost, must be poor property indeed. Comparing the earnings of these new roads with those of our best railways at the same age, they are found to be highly satisfactory; and we opine that the day is not so very distant, when it will be as much a matter of surprise that they ever fell to the quotations in our annexed table, as it now is that the bonds of the wealthy State of Ohio would not a few years ago bring 50 per cent., or that those of Indiana and Illinois fell to the pittance of 161 and 141 per cent.

BOSTON, CONCORD AND MONTHEAL BONDS, 1870.—Not all issued; \$500,000 reserved to redeem those of 1860, when they mature.

EASTERN 6's.—The \$1.500,000 authorized is to have a priority in any mortgage or lien hereafter made by the Co. The incomes are payable, \$75,000 each year, in December.

ILLINOIS CENTRAL —Secured by a pledge of lands, the sale of which will probably fully redeem them before maturity. them before maturity.

them before maturity.

Now-INTEREST PAYING BONDS.—The Ogdensburg Co. passed the interest due on the 1st and 2d mortgage bonds, Oct. 1, 1854, but have since paid that coupon on the 1st mortgage, and the one due April, 1865. The Vt. Central passed July 1, 1864, on the 2d mortgage, and Nov. 1854 on the first. Rutland, Aug. 1, 1864, on the 1st and 2d, and no interest has been paid on the 2d mort. The rule in selling bonds in this market is to charge the purchaser with the interest which has accrued since the payment of the last coupon, but in N. York it is included in the market value. When interest is not paid, the seller retains the first coupon passed and interest accruing afterwards is included in the price of the bond until all arrearages are fully paid up.

### UNITED STATES AND STATE SECURITIES.

During General Jackson's administration—1829 to 1837—the existing public debt was extinguished, and a surplus of \$40,000,000 accumulated in the Treasury which was disbursed among the States; furnishing, as was said, the only instance of a government's distributing money among its citizens, out of its overflowing coffers. This \$40,000,000, apportioned among the States, was differently disposed of. Massachusetts distributed it among the towns, and these towns resorted to various methods to give each citizen his portion. In one case, a cash distribution was made pro rata, based upon taxation. It was said that an old lady, an inveterate snuff-taker, received 62 cents as her portion of the \$40,000,000 which she immediately invested in maccoboy! Financially speaking, the old lady was "up to snuff."

Terms of the Surplus Distribution.—In one or two cases the States declined to take their portion upon the Government terms, which were, that all over \$5,000,000, in the Treasury Jan. 1, 1837, should be deposited with the several states, pro rata—in proportion to their respective representation in Congress—provided they should authorize their Treasurers to receive it and agree to repay the amount if called for. In case any State refused to receive its proportion, the same was to be divided among the others as above. The share of Massachusetts was \$1.784,231, and the total to be distributed \$37,468,859, payable in quarterly instalments, January, April, July and October 1, 1837. The last instalment was never distributed, however, as the wants of the Government rendered it impolitic. None of the money has yet been called for, and probably never will be; though, according to the law authorizing the distribution, the Government probably has the right so to do.

GOVERNMENT LOANS.—In 1813, the United States Government borrowed \$16,000,000, at 88 per cent., or 12 per cent. discount, the scrip to run 12 years and bear 6 per cent. interest. In 1842, a 20-year 6 per cent. loan of \$8,000,000, was issued at par. In 1847, another of \$18,000,000, 6 per cent., which was taken at \(\frac{1}{2}\) to 2 per cent. advance, \$7,000,000 being awarded to Boston capitalists. In 1848, \$16,000,000 was issued at 3.02 per cent. advance, the lowest, to 3.55 the highest, Messrs. Corcoran & Riggs of Washington city taking \$14,000,000, at the former rate.

These last two 20-year loans were on account of the Mexican War, and that of 1848 being just after peace, a higher premium was obtained. Other loans had been made in 1843 (since matured) and 1846, but not to a large amount. United States 6 per cents. had previously sold below par, as the tables of prices will show, but they remained there a short time only, and rapidly rose to 20 per cent. advance, and afterwards touched 124.

REDEMPTION OF PUBLIC DEBT.—Within but a few years after

these heavy loans were issued, money began to accumulate largely in the Treasury, and the policy was adopted of the Government buying its own loans at a premium. Up to July 1, 1853, the redemption was effected by purchasing in the market at the current price, but this mode was abandoned, and July 30, 1853, a public offer was made to redeem at the Treasury, between that time and Dec. 1, \$5,000,000 of the loans due 1867 and '68, at 21 per cent. premium, and Aug. 22, another offer was made for \$2,000,000 of the 1856 and '62 loans, at 8½ and 16 per cent. premium, with interest from July 1.

These offers have been renewed from time to time at different rates of premium, and are still continued; consequently the debt has been materially reduced as follows:—

| Public debt, July 1, 1852,<br>Redeemed from July 1, '52, to July 1, '53, | \$72,401,087 27<br>5,060,458 49 |
|--|---------------------------------|
| Redeemed from July 1, '53, to July 1, '54,                               | 67,340,628 78<br>20,098,422 73  |
| Redeemed July 1, '54, to July 1, '55,                                    | 47,242,206 05<br>6,658,574 40   |
| Balance of public debt, July 1, '55,                                     | <b>\$</b> 40,583,631 65         |

Since July, 1855, the redemption has still been going on, and the amount of indebtedness farther reduced. In addition to the payment of some \$32,000,000 principal within three years, about \$4,500,000 has been paid as premium on the same, thus presenting the only instance on record of a government redeeming its obligations before maturity, at a bonus of 21 per cent. on a portion, and averaging from 12 to 15 per cent. on the whole. In 1854, the Government also disbursed \$7,000,000 towards the \$10,000,000 to be paid Mexico on account of territory ceded by the "Gadsden Treaty," so called.

STOCKS HELD ABROAD.—The United States and State stocks are largely held abroad, where the usually low rate of interest makes them a desirable investment. As far back as 1838, it was estimated that \$130,000,000 of securities (now probably \$300,000,000 including railroad bonds) were held abroad, parcelled out amongst the States and divers corporations, the interest on all the State stocks having been paid in specie or its equivalent during the suspension, excepting those of Pennsylvania, Virginiaand Mississippi.

STATE LOANS.—Of the New England States, Maine and Massachusetts alone have any public debt, and that of Maine, a very small one, bearing 6 per cent. interest, is chiefly held at home.

The present loans of Massachusetts have been principally made in aid of her railroads, and all bear 5 per cent. interest, none of which date back of 1837. It is a gratifying fact to every New Englander, and especially to every citizen of Massachusetts, that

her bonds have always commanded a higher price in London than any other State security, or the United States 5 per cent. stock. In 1849, Massachusetts 5 per cent. sterling bonds reached 109 in London. The lowest price ever touched at home was  $84\frac{3}{4}$ , in December, 1842, when the Western Railroad sold £100,000 (called \$480,000) at auction. This was a period of great depression in State securities, owing to the non-payment of interest by some, caused by the financial embarrassments of that period, and the fear of repudiation.

REPUDIATION.—The only repudiating State in the Union is Mississippi, a disgrace to the confederacy, as she still persists in refusing to acknowledge her indebtedness, though able to liquidate it. A large portion of this same repudiated debt was issued to its unsuspecting victims at thirteen per cent. premium, all of which went into the coffers of her treasury. It should be stated, however, in justice to her citizens, that they subsequently voted in favor of

paying the debt, but were overruled by the Courts.

GREAT ADVANCE IN STATE STOCKS.—The rise in State securities from 1842 to 1844, was exceedingly large. Ohio 6's rapidly advanced from 48½ to 102½; Illinois 6's, 14½ to 45; Indiana 5's, 16½ to 49½, and so with others. Pennsylvania 5's and Maryland 6's, which had been down to 40 and below 50, respectively, rose in one year to 68 and 73! More recently we find Pennsylvania 5's selling at 97½ ex-dividend (Jan. 1853), equal to par, and Indiana 5's at 10½, March, 1854. The same Illinois bonds which fell to 14½ in 1842, touched par for the first time in their history (after being issued) about July 1, 1855, "a cheering fact for every sucker," as said a Western paper. Sept. 1, they had still farther advanced to 106½, the highest point.

\* United States 6's of 1862 are quoted until 1850, when those due in 1868 (issued in 1848) are substituted, in order to show the highest point reached by any of the gov-

The Indiana debt comprised eight classes in 1850; we quote the loan for which the State faith was pledged and interest provided for, by taxation. For the other portion, called "Canal Loan," the Wabash and Erie Canal lands, &c., were pledged. The higher quotations for Illinois 6's, in latter years, are for "Improvement Bonds," so called. In July, 18:45, Illinois paid \$86\$ interest on each \$1000 of debt, being the third like semi-annual payment. Indiana had also partially resumed interest payment, and both States have since resumed in full.

The various state securities have touched high figures at different periods. New York 6's, in 1835, were up to 126; in 1842 down to 78, and rose to 121 in 1850. Pennsylvania 5's were at 1094 in 1835, and 90h of \$123;; quotations in the table are for 6's of 1860; those due in 1870 sold as high as 1164; in 1850.

Massispin and Pennsylvania Bonds, brought 117.6 per cent. Indiana 5 per cents, issued in 1835, and 90, brought 117.6 per cent. Indiana 5 per cents, issued in 1835, and 90, brought 117.6 per cent. Indiana 5 per cents, issued in 1835, and 90, brought 117.6 per cent. Indiana 5 per cents, issued in 1855, and 90, brought 117.6 per cent. Indiana 5 per cents, stock, and Western States, issuing Ioans at that period or prior thereto. On the contrary, April 10, 1837, the State of New York asked proposals at not less than par for \$450,000, 5 per cent. stock, and \$150,000, 6 per cent. payable in 8 years, but no bids were received. Other States would have undoubtedly met the same fate, had they asked for loans at that period, so great had become the change in the finances of the contrary within two short years.

In 1844, \$1,000,000 City of Boston 5 per cent. Interest.

\* Winnesinner.—Ex-dividend of 15 per ct. in 1853 and \$100 per share, payable in land (equal to about \$50 cash) in 1853.

† Canton Co.—In 1853 the shares were divided, giving four new shares for each old one, and making the par 25, it having been altered a year or two previous from 65 to 100. This stock was formerly very active here, but is now entirely out of the market, New York taking control of it. It has been subject to the most violent fluctuations, frequently advancing or receding \$210 to 25 per share in a single day. Previous to 1835 it sold as high as 280. It consists of Land and Wharf property in Baltimore, some Boston Warst Power.—Very difficult to obtain reliable quotations of, but we give such as could be found. The nominal par, in 1835, was 120. In 1851 each share was divided into five, and it is now proposed to issue 7500 new shares, at \$40, in proportion of one new for every two old.

Hadden Halls.—The quotations are given as so much per ct. Par originally \$500, but changed in 1854 to \$100.

d Dec. 23, 1853; June 23 and Oct. 20, 1854; Feb. 27, 60 cents each; May, August and November, BOSTON AND ROXBURY MIL CORPOLATION.—No regular time of declaring dividends. The last six were paid Jan. 6 and Dec. and July 16, 1855. Dividends not included in the table were made Feb. 14, 1825, (No. 1), 50 cents; February, 1826 and 27, 60 6 and July 16, 1855. Dividends n 1880, and October, 1831, 25 cents.

CORPER MINICE STOCKS.—We give a few of the most prominent stocks; quotations for which go back a few years only, excepting the Pittsburg. Some years since the mining fever raged to a great extent, but as most of the companies then on the list have faded out, we do not give the speculative prices of those times. The Minnesota at first sold at low flavores, list others, in their commencement, but the stock was not publicly operated in here until 1855, when it had become exceedingly valuable. Fitts burg (sometimes called "Cliff Mine") was at one time almost valueless, and some parties forfeited their shares, in preference to paying further assessments. It was the first Copper Mining Company in this country, and has now become a very valuable and regular dividend-paying property. The Minnesota was originally only 3000 shares, on which the dividends given were paid. In July, 1855, the shares were increased to 20,000, at a nominal par of \$50. Only \$22 has been paid in, or 3.30 on the 20,000 sh. Winnismare Co.—The dividend in the table for 1854 was made Sept. 1853, payable in land, and worth about \$50 cash. The dividend in 1855 was equal to cash. The shares were originally \$500, but each divided hive six in 1835, making the par \$50.

East Boston Co.—The dividends in 1833 and 1835 were in cash for land sold, and that in Aug. 1838, 3 shares in Eastern Railroad stock for every 10 of the East Boston; and the nor in 1856 in East Boston Ferry stock at par, then worth about \$80 per share. All others in land.

East Land Co.—The stock of this Company has reached very high prices in former years, large sales being made at 100 per cert, pring and another of \$6 per share, cash, June 1854.

Lawrence Warre Power Co.—A dividend of 40 per cert, payable in Bakes Manifesturing Co. stock, was made May 1, 1852, and one of 10 per ct., April 1, 1854, payable in Hill Mill stock. Previously, interest dividends at the rate of 6 per ot. were paid in cash.

Bacto Warre Power Co.—The Authorise of the 1843, then ehanged to \$90, and in 1845 to \$10

### MONEY MATTERS ABROAD.

Consols and their Fluctuations.—The Bank of England, its dividends and bates of interest.—Bank of France.—The year 1824, in England, was marked with heavy undertakings and great excitement among the stock operators of the day. A decline in the rate of interest had occurred, which was followed, as it always is, by speculative movements, so that the newspapers of the day could scarcely contain the announcements of the new schemes. Shares were issued at high premiums and advanced enormously. This highly inflated state of things could not last long, however, and in May and June, 1825, a reaction took place which resulted in enormous losses to individuals, and in the suspension of many firms previously considered solvent and strong.

Immense reduction of Bullion and rapid increase.—On the 17th of December, 1824, the coin in the bank of England was reduced to £1,027,000, (in 1852 it had increased to over £22,000,000), and a belief on the part of many of the leading firms was, that the bank must soon stop. But the worst had come; and by the 29th of that month the loans of the bank reached £15,000,000, while two weeks before they had amounted only to £7,500,000. Such was the pressure of the times, that sixty-seven country banks failed in

England during the preceding summer.

Another inflation,—American stocks at a high premium.—For some four or five years following, an improvement gradually took place in the manufacturing and commercial channels of that country; and about the year 1833 speculation again rose. The new 4 per cent. stock was further reduced to 31. Foreign loans, joint stock banks and railways came in vogue during 1834—'36. Individual States of this Union, particularly Louisiana, Mississippi, Maryland and Pennsylvania, negotiated heavy loans, large portions being taken by the Rothschilds; among which, \$3,000,000 of Maryland 6 per cents. at sixteen per cent. premium, or 116! About this time, \$1,500,000 Mississipi State Bonds (afterwards repudiated) were taken by Messrs. Prime, Ward & King, and others, at a premium of thirteen per cent.

A sudden reaction, however, following, a large portion of the American securities negotiated in Europe were sent back, with orders to sell at any price. The financial troubles and disturbances of that period, followed by a general suspension of specie payments throughout the Union, are noticed at length in our article on bank-

ing and finance.

Money EASY AGAIN.—Railroad mania, American Stocks down.—Passing on to 1844, however, we find that England had recovered from this revulsion and money had again become a drug. In April of that year, two schemes for railroads were published in London, involving an outlay of £4,000,000 to £5,000,000 capital.

In September, 1844, the Bank of England reduced the rate of interest to  $2\frac{1}{2}$  per cent., having, what was then considered, the very large sum of £15,158,000 bullion. Speculations in cotton were rife, whilst the subscriptions for railroads, mining companies &c., in England, reached the enormous sum of £200,000,000 sterling. Such, however, had been the discredit of American State securities, that in 1843 Maryland six per cents. sold at 50 cents on the dollar; and Louisiana five per cents. 57 per cent. in September, 1843, although money was comparatively abundant in Europe,

Money Tight.—Bank charter violated.—In England, during the year 1846, a dearth of corn took place—the potato crop failed—corn was largely imported, and coin consequently exported. £8,000,000 was granted to Ireland in March following—£7,000,000 in gold was withdrawn from the bank for export—money became dear—the bank refused discounts to its best customers—and on the 25th October the bank charter was violated with the assent of the ministry, which enabled that institution to extend facilities to the public, at an interest of eight per cent., an enormous rate when we consider that the price of money there does not average above half that figure. The Bank of France extended its aid to that

Since then the monetary affairs of Great Britain have not been subject to any marked peculiarities, and although engaged in an enormously expensive war, very little obstruction to the ordinary course of trade had been experienced, up to the latter part of 1855.

of England during these severe times.

Consolidated Annuities, or "Consols."—In 1751, by act of the British Parliament, several separate government stocks were consolidated into one general stock, called in the act, "Consolidated Annuities," and commonly quoted, for brevity, "Consols," bearing 3 per cent. interest, and then amounting to only £9,137,812.

This stock, from its present large amount, (about £400,000,000 or \$2,000,000,000), and the immense number of its holders, is more sensible to financial influences than any other, and is therefore the favorite stock for the operations of speculators and jobbers, being considered the "barometer" of the market. *Omnium*, signifies the whole of the stocks of which a government loan consists, when two or more descriptions are given for £100 in money.

English mode of Borrowing.—Instead of borrowing money as private individuals do, at the current rate, it was from an early period customary with the English government to fix the rate of interest, generally at three per cent., and, as the market rate was high or low, to promise to pay a larger or smaller amount of principal. Hence the mass of the debt was contracted into a three per cent. stock, and the amount was augmented nearly two-fifths more than the sum actually lent to the government.

Enormous Fluctuations of the Funds.—The funds have undergone some fearful vicissitudes. In 1700, on the death of the King of Spain, they fell to 50 per cent. After the peace of Utrecht, in 1715, they rapidly rose; and between 1730 and the rebellion in

1745, were never below 89; but during the rebellion, sank to 75. They fell to 53 in 1782, at the close of the American war; and, mounting afterwards to 97½ in 1792, fell in 1798 to 47½. This was the lowest they ever reached. Between that and the highest point, 107, attained in the year 1737, the difference was equivalent to 127 per cent., sufficient to annihilate many fortunes, or to confer great wealth on those who purchased when the funds were at the lowest. From 1755 to 1844, a period of nearly 90 years, Consols were always below par.

The most trying periods of the present century to Great Britain were in the years 1802-'3, 1814-'15, 1819, 1825, 1830 and 1847, as will be seen by reference to the prices of Consols for

those years, in the table.

Causes of the Depreciation.—The rapid depreciation in 1802-'3, was the result of the war with Napoleon. In 1814-'15, that of the hundred days and the battle of Waterloo. In 1819 the commercial and bank failures were greater than ever before known. In 1825 a reaction took place after great expansion; eminent bank-

ing and mercantile firms failed, and credit was shaken.

In 1830 the French Revolution caused a severe disturbance of the commercial circles of Europe; and the fall of 1847 was caused by the critical condition of the Bank of England, the famine in Ireland, and general distress among commercial men. It was greater than had been known during the prior eighteen years—exceeding that which followed the declaration of war by the French Convention, the first bank suspension (1797), and the Irish Rebellion of 1798. On the other hand, we see, in 1853-'4 and '5, Great Britain and France engaged in an expensive war—their grain resources materially cut off from the East—an immense export of gold, and yet three per cent. Consols are higher than during the peaceful periods of 1846-'7.

### BANK OF ENGLAND.

This immense engine of finance is now so intimately connected with monetary matters in our own country that the slightest throb of its quickening pulse has a controlling influence on movements in State or Wall street. In view of the interest now felt in its past, present or future movements, we have taken considerable pains to prepare a statement of its dividends from the commencement (1694)—more than 160 years—and in connection give the highest and lowest price of the stock, as also the different rates of interest charged by the Bank, with each time when a change was made, and the amount of bullion then on hand. These tables form a complete history of the Bank's movements from the beginning, and cannot fail to be of interest to all who are in the least interested in financial affairs.

### BANK OF ENGLAND AND CONSOLS.

Dividends from its commencement—1694 to 1856, with the highest and lowest prices of the Stock, and Consols, each year from 1730.

### MISCELLANEOUS.

TEXAS DEBT BILL.—By the Louisiana, from Texas, we received a full copy of the act of the Texas Legislature, giving the assent of that State to the Texas Debt Bill of the last Congress.

It is very ingeniously drawn up, so as to assume that the act of Congress is as much an act "to scale" the public debt of Texas as the acts of Texas herself have been to which the charge of repudiation has been attached, although the rate of reduction is somewhat different. The bill very carefully enumerates the several classes of public debts of Texas, to the payment of which the money appropriated by Congress is applicable, and states their "ostensible" value, that is, the par amount at which they were contracted, and the interest which has accrued upon them. The aggregate of debt and interest is the sum of \$10,078,703.21, which is stated in the bill as the "ostensible" debt, among the holders of which the sum of \$7,750,000, appropriated by Congress, is to be distributed pro rata in full extinguishment of the debt. The scaled amount at which Texas recognized it in her settlement was \$4,467,756; but this bill takes no notice of that, but recognizes the "ostensible" sum as that which Congress has undertaken to discharge at a "scaled" rate of its own. It was, doubtless, so expressed in the law, for the purpose of marking it for perpetual record that the United States "scaled" the debt.

The proviso which we have heard spoken of as attached to the article in which Texas renounces her claims against the United States, growing out of Indian depredations, is in the following words:

"Provided this abandonment shall not extend to the claims of individuals who

have lost property by the enemy."

This claim may create difficulty in the acceptance of the act as a complete renunciation by Texas; but it should not. The claim which Texas has been pressing upon Congress was for expenditures from the public treasury in repelling hostilities. This is the only class of claims which the State could renounce, and these were never very formidable demands. It would have been very easy to show that the United States owed Texas nothing on that head, and the claims of any citizen of Texas upon the United States for losses from this cause, incurred when Texas and the United States were nations foreign to each other, and could only act through their respective governments, would be too utterly and palpably worthless to merit notice. The reservation of such demands may have been a propitiation to some fastidious voter in the Legislature, but it is too absolute a nullity to be allowed to effect the complete acceptance of this act as a final settlement of the controversy.—New-Orleans Picayune.

BILLS AND NOTES. An Important Decision to the Commercial Community.—In the case of Jervis Spencer against the Bank of Baltimore, concluded this morning by a verdict in favor of the Bank, under the instructions of the Court, the important questions were decided: That when a note is drawn to order, dated in the city of Baltimore, and indorsed by a resident of Baltimore, and made negotiable at a bank in the city of Baltimore, payment of said note is properly demandable at the counter of the bank where made "negotiable," though the drawer may reside out of the city, and the place of his residence be known to the bank; that the word "negotiable," in commercial sense, is synonymous with payable; and that a bank may retain out of deposits in a bank, by an endorser on such note, a sum sufficient to cover the amount of the note, interest, and costs of protest. The case is an important one, and will be carried to the Court of Appeals.—Baltimore Patriot.

This principle is one that has been in force for many years. If a specific point be named in a promissory note, as the place of payment, a demand must be made at that point: it being a part of the written contract.

BANK Notes "At Par."—A suit was lately decided before Judge Pearson, at Harrisburgh, in which the Bank of Chambersburgh was sued for the amount of the penalty imposed by the 47th section of the General Banking Law, which requires that the country banks, east of the mountains, shall keep their notes at par in Philadelphia, those west of the mountains, in the city of Pittsburgh. If any bank

fails to comply, a penalty is imposed during such length of time as its notes may be under par, at the rate of two mills per annum on every dollar of the average amount of its circulation for the preceding year. The suit was decided against the Commonwealth, because of some informality in bringing it; but the following point, made by Judge Pearson, as to the meaning of the words "at par," is of importance, if it is to be adopted as a general principle: "The notes of a bank at par, within the meaning of this act, is whenever they are equal to gold and silver for ordinary purposes. The phrase 'at par' does not mean that the paper must be received in the custom-house, at the city banks, or by the brokers. If the notes are equivalent to gold and silver for all ordinary business transactions, they are at par within the true intent and meaning of the act."

To interpret the meaning of the words "at par" as any thing less than convertible into coin without cost, appears to us a violent change from their ordinary application.

Mysterious Disappearance of Bank-Bills.—Within a short time past, nearly \$10,000 have disappeared in effecting the exchanges between some of our State-street banks. The particulars, as we learn, are as follows: As our readers are aware, an exchange of the bills of other banks held by the banks in this city, is effected by many at the commencement of business for the day. For this purpose there is at the Suffolk Bank a box for each of the other banks, in which the bills of these several banks are placed, and from which they are taken by the messengers of the respective banks. On Thursday morning last, the messenger of the Washington Bank went as usual to make his exchanges. The box at the Suffolk was emptied as usual into his bag and he proceeded to the Washington Bank, where, on counting the bills, the sum of seven thousand dollars was found to be missing. The Suffolk Bank contends that it delivered to the messenger of the Washington the full sum due that bank. The messenger—whose integrity is firmly established—says that he delivered all he received to the cashier of his own bank. Where the bills have gone to, is a question which has not yet been solved, and in the mean time an interesting question arises, which bank is to bear the loss.

We also understand that a mysterious disappearance of a similar nature has occurred between the Suffolk Bank and the Merchants' Bank. The amount is \$2500. The Suffolk Bank claims to be able to show that the bills were delivered. The Merchants' Bank never received them. Thus the matter stands at present. The whole affair is wrapped in a deep mystery, which all the efforts to solve have thus far been in vain.—Boston Journal.

All such losses and disputes could be entirely obviated by a Clearing-House in that city. Similar losses were frequently sustained by the banks here, formerly; but nothing of the kind can occur under the present system.

COLLATERALS.—At the recent session of the Circuit Court of Rhode-Island, Judge Curtis decided a case of some interest to those loaning money on collateral securities. John Lockwood and others were plaintiffs, and the Traders' Bank of Newport, defendant.

The Bank had loaned the plaintiffs \$5000 on the pledge of one hundred shares of stock in the Newport Gas Light Company, to be returned on the payment of the draft discounted. Pending the maturity of the draft, the Bank delivered the stock to Henry Bull, upon his written promise to return it to the Bank seasonably. Bull surrendered the stock to the company, and obtained new certificates in his own name, and transferred them to the Bank in blank. The Bank forwarded them to New-York, where the plaintiffs' draft was payable, but they refused to receive them, and allowed the draft to be protested. The Bank then sold enough of the stock to reimburse the loan and expenses, and notified the plaintiffs that the balance of it was subject to their order. The plaintiffs sued the Bank, claiming that they were not bound to receive the new certificates in place of those left by them with the Bank. They also contended that an election in the Gas Company was claimed to be illegal in a petition filed in the Supreme Court of the State.

Judge Curtis decided that the stock itself was something that was not tangible and visible, and therefore could not have been left with or demanded from the Bank; that the certificates were, in both the delivery to the Bank and the tender by the Bank, the evidence of title to the stock; that the certificates tendered by the Bank being perfect evidence of such title, the plaintiffs had no right of action,

and that as to the contested election, whatever might hereafter be decided as to its validity, it was sufficient as between the parties to this suit, that the Directors elected had acted as such. He therefore non-suited the plaintiffs.

ROBERT SCHUYLER DEAD.—So Robert Schuyler is dead. The great defaulter has paid a debt which could not be avoided. A Paris correspondent of *Courrier des Etats Unis*, New-York, furnishes the following particulars:

"Robert Schuyler died about the middle of last month, at his residence in the environs of Genoa, where he had been living for some time in the strictest incognita with his family.

"He was not enriched with his monstrous frauds; on the contrary, he received

from America the funds necessary for his subsistence.

"The place of residence would have been known a long time ago if certain persons, occupying important positions in the management of several railroads, and especially the New-Haven Railroad, had not been deeply interested in securing his silence and absence from the country.

"Since his departure from America his health has been on the decline, and he

finally died of grief and mortification.

"Several eminent financiers in New-York will not be sorry to hear the news of his death. He has left, as I am informed, a great number of important papers, which will be published. They will form a curious chapter in the history of speculating enterprise in the New World. The corpse has been interred temporarily, and will probably be transported to America."

Counterfeits.—Mr. Seropyan, of New-Haven, Connecticut, who has for several years pursued studies in chemistry, at Yale College, has invented or discovered a valuable combination or process whereby the counterfeiting of bank-notes or other prints, by photography or anastatic means, or by lithography, can be entirely prevented ! His plan has been submitted to the chemical department of Yalo College, and also to the "Massachusetts Association for the Prevention of Counterfeiting, and they fully corroborate the assertion of Mr. S. as to the success of the plan. It will also prevent counterfeiting by imitation of bank plates; because the ink used by him being only known to himself, cannot be procured. The peculiarity of the ink is such, that it conveys an unique impression upon the bank-bills—one that cannot be imitated. Neither can genuine bank-notes, printed by this means, be altered from a smaller to a larger denomination. No portion of the bank-note can be removed by ordinary chemical process without being readily discovered. The process has been submitted to several bank-note engravers of our city, who have entire confidence in its success, and who are convinced that, by the means now alluded to, the community can be protected against the present evils of counterfeiting. The faculty of Yale College (Scientific Department) has given the following feiting. The faculty of 1 are contege testimonial, in favor of the new process of printing:

"New-Haven, Jan. 21, 1856.

"We have for some years been well acquainted with Mr. Scropyan, and hold him in high esteem. His studies pursued in the Yale Laboratory at this place, have fitted him for successful investigations in chemistry. His recent researches connected with his patent, have been skillfully conducted, and his results are every way worthy of confidence. The method he has devised, is a perfect protection against counterfeiting by photography and the anastatic process, and also against alteration by erasure or otherwise. The paper used is improved by the process, acquiring increased strength and durability; and the color of the paper and printing is well contrasted, producing perfect distinctness and a fine effect. The process is exceedingly simple, and yet completely effectual, and must be of immense importance to all banking institutions.

"B. SILLIMAN,

"JAMES D. DANA,
"Yale College,
"B. SILLIMAN, Jr.,
"Professor of General and Applied Chemistry,
"John A. Porter,
"Prof. of Analytical and Agricultural Chemistry."

Bank Architecture.—In pursuance of a notice issued by the publisher of this work, various plans have been submitted for the construction of country bank buildings. These plans have been laid before a committee of cashiers, who have examined the same, and who have awarded the premiums for the best plans, namely: one for a building to cost about \$10,000; secondly, \$20,000; and thirdly, \$30,000. These accepted plans will be published in the early numbers of the Bankers' Magazine—probably in April, May, and June next.

Two of our city banking houses have lately been partially in flames, owing to imperfect construction. The liability of this contingency has induced the owners of new banking houses to erect such buildings as may be considered fire-proof. For a description of these the reader is referred to the Bankers' Magazine for February, containing views and architectural descriptions of four of these costly structures, namely: I. The banking house of Messrs. Duncan, Sherman & Co. II. The Bank of the State of New-York. III. The Mechanics' Bank. IV. The Bank for Savings, Bleecker street. The architects have in each case taken the necessary precaution to guard against internal and external causes of fire; and state in their accounts of these buildings, that they are essentially (as they should be) fire-proof. This will furnish additional security, not only to the bank property itself, but to the property of their numerous tenants, the three houses first named being provided with numerous suites of rooms for bankers, insurance companies, etc.

List of Banks and Bank Officers—The Banker's Almanac for 1856, is now ready for distribution, containing various items of information which render it an indispansable volume for the cashier's desk. Among these items are: I. An accurate list of the Banks in each State of the Union, arranded alphabetically in cities, with the names of president and cashier of each. II. A list of eight hundred private bankers in the various cities and towns of the United States, corrected to January, 1856. III. The Usury Laws of the Several State, with the rates of damages on Bills of Exchange, foreign and domestic. This series was also published early in the year 1855; but there have been important modifications since in several of the States. In Georgia, North-Carolina, Illinois, Louisiana, and Pennsylvania, as well as in California, some recent changes are stated. As the edition of the work is a limited one, those who desire copies should forward their orders immediately.

New-York City.—William T. Hooker, Esq., who has been Cashier of the Continental Bank since its formation, has been elected President of the Bank in place of the late Mr. George Curtis, whose death was recently stated. Benjamin F. Warner, Esq., of the Chicopee Bank, Springfield, succeeds Mr. Hooker as Cashier.

Geneva.—William T. Scott, Esq., was on the 11th of February elected President of the Bank of Geneva. S. H. Verplank, Esq., succeeds Mr. Scott as Cashier.

NEW-HAMPSHIRE.—Levi Chamberlain, Esq., has been chosen President of the Cheshire Bank, Koene, in place of John Eliot, Esq., resigned.

Milford - The Souhegan Bank, at Milford, commenced business in January last. President, Thomas Chase, Esq.; Cashier, H. A. Dauiels, Esq. Capital, \$100,000, paid in.

Portsmoath.—The Bank of New-Hampshire has commenced business at Portsmouth, Cashier, J. P. Bartlett, Esq.

MASSACHUSETTS.—J. F. Kimball, Esq, was in November last elected Cashier of the Appleton Bank in place of John A. Buttrick, Esq., resigned.

Association for the Suppression of Counterfeiting —George W. Thayer has been chosen Chairman of the Bank Board for Suppressing Counterfeiting; Treasurer, Almon D. Hodges; Secretary, Charles B. Hall; Executive Committee, James G. Carney, James M. Thompson, Almon D. Hodges, Lemuel Gulliver, Charles B. Hall. It was voted, that an assessment at the rate of five dollars on each one hundred thousand dollars of capital stock, be laid upon the banks for the ensuing year.

RHODE-ISLAND.—We learn from Providence, that the brokers of that city have formed themselves into a Board, and have adopted the rules of the Boston Brokers' Board. A. B. Dike, Esq., the oldest broker in the city, has been elected President; Luke Green, Vice-President; Thomas A. Doyle, Secretary; and P. B. Stines, Jr., Secretary.

MARYLAND.—The Farmers and Merchants' Bank of Baltimore was in serious trouble a few days ago, in consequence of the keys of the vault having been lost. They were missing when the bank was opened in the morning, and were not found until after the hour of closing, during all of which time the vault remained unopened with all the books, papers, and money therein. A duplicate key of the vault was in the institution, but had been mislaid. Fortunately, the lost keys were picked up in the street and restored to the bank in the afternoon. The usual business of the day was meantime transacted with money obtained from other institutions.

VIRGINIA.—The Speaker of the House of Delegates presented the following communication from a committee of the Board of Trade of the city of Richmond:

"To the Honorable Speaker, etc.: The Board of Trade of this city respectfully represents that the bank capital is wholly inadequate for the present and increasing requirements of the community, being now not more than it was thirty years ago. In the meanwhile, the city has advanced greatly in population, manufacturing and mechanical production, and in commerce. The inadequacy has been sensibly felt in years past, is now loudly complained of, and will necessarily be more felt as business and commerce are increased. The prospects of the city are altogether cheering. Its manufactures are large and diversified, its mechanics numerous, enterprising, and successful. The market is more and more attracting the attention of the interior trade for the purchase of its supplies, and is advancing in importance as a dépôt of the products, agricultural, manufacturing, and mechanical, of the State at large. To accommodate the vast accession to its general business, and the increasing accessions on which it is authorized to rely, wherein the country connected with this market is not less interested than is our own community, a material addition to the banking capital of this city is urgently and immediately required. Its influence in sustaining and advancing the market will be to the equal advantage of the country and the city, since facilities accorded to trade are a direct benefit to the producer. The petitioners humbly pray that an increase of the bank capital may be in due form provided for."

Bank Charters.—The bank question has assumed a very unexpected phase. A clause making the stockholders individually liable was adopted. It was reconsidered, and the same clause again adopted by a vote of 79, a majority of the whole House. On the same day, on motion of Mr. Edmunds of Halifax, the whole bill, as amended, was stricken out, leaving the question open. Finally, a compromise was adopted to the effect that while the individual responsibility clause is abandoned, the mother banks shall pay out only their own notes and redeem them in specie; so, also, with the branches. Also, that the notes of the branch banks shall be redeemed at the mother banks, or places of redemption, at one fourth per cent discount. The law, chartering the Bank of Virginia was pussed by a vote of 118 to 19, and provides that the charter shall run for sixteen years from April, 1857.

The charters of the Farmers', Exchange, Bank of the Valley, etc., were also ordered to an engrossment, in the precise form in which that of the Bank of Virginia was passed—with the exception of the time when the charter shall expire, which was left in blank. It is thought that the times, when the charters of these banks shall expire, will vary from the time fixed for the Bank of Virginia.

GEORGIA. — The Legislature of Georgia has granted several new charters. Among these: I. The Mechanics and Planters' Bank of the city of Savannah. Each of its branches will be required to pay specie on all the bills issued by them. II. A bill to incorporate the Exchange Bank of Georgia, in the city of Griffin; capital, \$500,000. The charter of this bank contains the usual restrictions incorporated in all bank charters by the present Legislature, pledging the private property of the stockholders for the redemption of its issues, guarding against the sale of the charter, and prohibiting any man not a citizen of Georgia from being a Director. III. A bill to incorporate a bank in the city of Columbus, to be called the "Bank of Columbus." Capital, \$250,000. IV. A bill to incorporate a bank at Cuthbert, Randolph county, to be called the "Bank of Cuthbert." V. The North-Western Bank of Georgia, at Ringgold. An act was passed by the last Legislature, to incorporate a bank in Savannah, to be called "The Mechanics and Traders' Bank." A bill has passed both Houses of the present General Assembly, and received the sanction of the Governor, changing the name of the bank to the "Bank of Commerce," extending the time within which it shall go into operation, and introducing other changes in the charter. The act of incorporation as it now stands is one of the most liberal ever granted by the Legislature.

The charter is for thirty years; that is, until the year 1886, and the time within which the bank shall go into operation is extended to the first January, 1857. The bank is made capable in law to hold real estate so far as may be necessary for the erection of banking houses, and such as may be bona fide mortgaged to it as security, or conveyed to it in satisfaction of debts, or purchased at sales upon judgments for such debts, and to dispose of the same. These and other privileges

common to similar institutions are secured and provided for.

The capital stock is limited to \$2,000,000, which shall be divided into shares of \$100 each. The bank may commence business as soon as \$100,000 shall have been paid in specie, and after it has gone into operation the Board of Directors may in their discretion order the sale of additional stock, provided that no such additional stock shall be sold until the sum of \$500,000 shall have been actually paid in by subscribers.

The Board of Directors are permitted to establish branches in any city or town of this State, where the authorities of the same do not object, said branches being

required to redeem in specie all bills issued by them.

MISSOURI.—By an act of the late General Assembly of the State of Missouri, approved 11th December, 1855, amendatory of an act cutitled, "An act to charter the Bank of the State of Missouri," approved 2d February, 1837, the charter of this bank has been extended until the 2d of February, 1861, namely:

this bank has been extended until the 2d of February, 1861, namely:

An act to amend an act entitled, "An act to charter the Bank of the State of

Missouri," approved February 2d, 1837.

Be it enacted by the General Assembly of the State of Missouri, as follows:

Section 1. The first section of the act of which this is amendatory, is hereby amended, by striking out of the seventh line the words "fifty-seven," and insert-

ing in lieu thereof "sixty-one."

Sec. 2. The intention of this amendment is to provide that the bank shall continue until the year of our Lord one thousand eight hundred and sixty-one, any act to the contrary notwithstanding; and all acts and parts of acts in relation to the Bank of the State of Missouri, or any of its branches, now in force, shall continue in force until the second day of February, in the year eighteen hundred and sixty one. This act to take effect from its passage.

Approved December 11, 1855.

# Notes on the Money Market.

NEW-YORK, FEBRUARY 23, 1856.

Exchange on London, at Sixty Days' Sight, 9 a 91 Premium.

The month of February has brought about a highly favorably change in the money market. Money has again become quite abundant, stocks have risen rapidly in market values, and there are already indications of an active spring business throughout the Union.

The main cause of this great change, is the fact that negotiations are now pending for the restoration of peace between Russia and the Western Powers, and that all the parties concerned have expressed a willingness to treat upon points already conceded or avowed. This intelligence promptly acted upon the London market, and consols advanced from 86‡ to 91‡.

The closing prices of consols at the close of the last thirteen weeks have been as follows:

| Bept | 15,    | .903   | Nov. | <b>2,</b> | Dec. | 21,  | 88¥        |
|------|--------|--------|------|-----------|------|------|------------|
| 64   | 22,    | 8974   | 64   | 9,        |      |      |            |
| 44   | 29,    | .883   | 66   | 16,881/2  | Jan. | 4    | 87¥        |
| Oct, | 6,     | .87%   | 44   | 28,       | 4    | 11   | \$61⁄      |
| 46   | 12,    | .87%   | 44   | 80,891/   | 44   | 1889 | 1 4 a 89 Y |
| 44   | 19,    | 87     | Dec. | 7,90%     | **   | 259  | 14 a 90 16 |
| (t   | 26,89% | a 88 🔏 | 44   | 15,       | Feb. | 291  | X a 91%    |

The Liverpool Times speaks thus of the activity and excitement:

"The excitement on the stock exchange when this intelligence became known was intense. The British funds rose more than three per cent, and from the commencement to the close of business, the operations were enormous—a little dashed occasionally by the various readings which were given as to the sense in which the phrase 'basis' was to be understood. But when it was posi-

tively known that Count Nesselrode had informed the Austrian envoy that the propositions were accepted purely and simply as the foundation of preliminaries of peace, the minds of the dubious were reassured, and the value of the securities increased.

were reassured, and the value of the securities increased,

"In foreign stock, also, much was done, and already an immense impetus has been given to the
general trade of the country - the result of this almost unhoped-for state of things, respecting which
nothing better than guesses could previously be offered, even by the best informed. The value,
too, of many articles, which had been enhanced solely by the war, has already suffered considerable
depreciation, and the next few weeks, and even months, will doubtless exhibit the same feverish
excitement by which business of all kinds has been so suddenly affected. A time of transition
like the present is one in which fortunes are made, and we may add, lost, and there is still sufficient
uncertainty about the future to keep alive anxiety and even fear."

An equally favorable change is noted in the market value of all classes of public securities in the London market. During the week ending 26th ult, the last installment in the Turkish six per cent loan was paid, amounting to £631,250. One new feature in the London market is in itself indicative of renewed confidence in approaching peace, and in an easy condition of money matters—this is the increase of new banking concerns. The proposed establishment of the Western Bank of London has been announced, with a capital of \$400,000. The capital of the Royal British Bank has been increased to \$300,000.

We learn from our London papers that a new joint-stock bank is about to be formed in that city, under the title of the International and London Joint Stock Bank, which is to embrace in its operations a very extensive field of business, principally in connection with the chief continental cities of Europe, as well as in the United States of America. To effect this object, it is proposed to establish chief offices in Paris, Brussels, and New-York, with branches at Bordeaux, Marsellles, Lyons, Nantes, and Havre in France; Antwerp and Liege, in Belgium; and New-Orleans, St. Louis, and other large cities in the United States. The argument for extending the joint-stock principle, is the same as that used by the other joint-stock banks recently established—the large dividends and bonuses they have paid, and the present value of their stock. The foreign offices are to be under the direct control of a local board of managers, selected by the chief board in London, who will have the power of supervision.

The business operations contemplated by this association, will embrace all the transactions o banking in their ordinary form, such as deposits, discounts, current accounts, and bank agencies; the purchase and sale of mercantile and bankers' bills, both foreign and domestic, when fully secured by bills of lading. The purchase of import of bullion is to form another feature o business, in connection with that of exchange in all its branches. The same advantages are held out to depositors on current account as those already enjoyed by existing banks.

We understand that an establishment which has already at its command an extensive business of long standing in London, is to form the nucleus of the proposed Bank. That the field open to financial and banking operations has been vastly extended during the last few years, no one can deny; but the safety and prosperity of joint-stock institutions, such as the one proposed, must depend entirely upon the sound judgment and practical knowledge of those engaged in conducting and controlling its operations.

We find that a considerable expansion is going on among the New-York city banks, following the increased accumulation of deposits. The loans have increased since the first week in January, \$5,000,000; deposits, \$3,000,000; and specie, \$4,000,000, The items for each week since December, have been as follows:

| 18    | 55. | Loans.       | Specie.      | Circulation.       | Deposits.    | Sub-<br>Treasury. | Aggregate<br>Coin. |

| Feb.  | 88, | 100,745,447  | 15,885,874   | 7,664,688          | 87,630,478   | 2,221,000         | 18,056,800         |

About \$1,500,000 have been disbursed by the Treasury upon the drafts of the Mexican government, under the treaty of purchase of territory. The accumulations of gold from California during the months of January and February, have been fully seven millions of dollars; while the foreign export has been only \$1,804,000 for the past two months. This will account for the enlarged specie returns held by the banks of the city.

The influx of capital from Europe to the United States, we think, will now become more genera than at any former period. It is even proposed to establish in the city of New-York, a bank with a capital of fifty millions of dollars, upon the plan of the Credit Mobilier of Paris. The fact that money can be used in this country so as to realize S or 10 per cent per annum, will continue to draw large sums for investment in this and other States.

The export of specie from the port of New-York, for January and February, of late years, has been as follows, (in round numbers:)

| 1859, | <b>\$6,419,000</b> | 1855, | \$2,250,000 |
|-------|--------------------|-------|-------------|
| 1853, | 1,665,000          | 1856, | 1,804,000   |
| 1854  |                    |       |             |

Do away with the slight ground for discord between England and the United States, and we find abundant elements of prosperity at home. The country was never in a better condition to maintain its commercial independence of Europe; and if a ten years peace can be guaranteed to us, foreign and domestic, the resources of the Union will be more fully developed in these ten years than in any previous twenty, without any reliance upon Europe for an extraordinary market, as now prevails for American produce. The vast agricultural and mineral resources of the country are becoming rapidly developed. The financial position of the States is every year becoming more favorable; the debts in some cases are augmenting, but the sources of taxation and revenue are increasing in a great ratio.

The news from Europe has not yet had its full effect upon the stock market. It is very apparent, however, that prices must rise far beyond the quotations of the past week. A demand for State loans will unquestionably follow the torpor that has prevailed of late; and the mails by the steamers of March will probably bring orders to a limited extent, for first-class railroad shares and loans. The improvement noted in the money market, and the renewed activity in trade, will soon have their effect upon the values of stocks.

The low price for State loans that have prevailed since October last, have induced many holders to withdraw from the market. The quotations annexed are any thing but satisfactory to those who invested at par, as was done in a large number of cases; but we think a better day is near, and that this species of loans will gradually recover their true ground. Virginia loans at six per cent are quoted at  $95\sqrt{a}$  96, and are depressed by the fact that the State is increasing its indebtedness by its further subscriptions to railroad undertakings. No fear need be felt, however, of the solidity of the bonds. The State is, and will be, amply able to meet all its obligations, even if all the railroads in which it is interested should fail. Missouri Six per Cents are depressed from the same cause, and sales are made every week at 87 a 87%.

We annex the prices at the close of each of the past six weeks:

| Jan. 19.                          | Jan. 25. | Feb. 1. | Feb. 8. | Feb. 15. | Feb. 22. |

We do not quote Maryland loans, because there are none in the market; and to be had only by inquiry. The funded debt of Maryland will become extinguished in a few years by the accumulations of its own sinking-fund. We find that, by a recent enactment of the Legislature of Missouri, that a sinking-fund has been created, whereby the whole debt of the State will in a few years be cancelled. Taxation in that State is very low, and the expenditures annually very small. The new law provides a permanent sinking-fund for the protection of the credit of the State. It is accompanied with the act establishing a county sinking-fund, which, though not immediately advantageous, will be found to be so two years hence, when the mill tax comes into operation. The law establishing a sinking-fund for the city of St. Louis is already in force. We understand that this fund already amounts to more than five hundred thousand dollars, arising from the sale of the city buildings, the centre market place, and city commons, and that a portion of it is already available. Installments upon all these sales are psyable annually, until the debt is extinguished, which, with the annual accruing interest, will furnish a very handsome fund for the protection of the credit of

the city in any emergency. Capitalists will hardly fail to see, in these measures, the ability and the disposition of the State of Missouri and the city and county of St. Louis to meet all their liabilities. Indeed we consider the finances of Missouri as established upon as firm a basis as those of any Western State. Missouri six per cents were recently quoted at S5 a S54, with a very limited debt and ample resources; while Indiana, whose debt has been once compromised, is quoted at S14 for a five per cent stock. This unfair discrimination will, we have no doubt, be speedly rectified, and the bonds of the former soon be restored to par.

In railroad shares there has been no important change during the week. Prices of Michigan Southern shares were carried up to par for one day only last week. The New-York Central Railroad Company make an admirable exhibit of revenue for the past year, and show an increasing rate of profit. They are now paying a four per cent dividend. For Reading, the price is strady, and very little stock offering at the Board. This company presents a highly favorable exhibit for the past year, and shows a prospective ability to pay ten or twelve per cent dividend annually. Its friends say that the road will divide fourteen this year; but of this operators must decide for themselves. We have full faith in the capacity of the road to pay at least twelve per cent for some years to come.

The comparative prices at the close of each week are as follows:

|                                      | Jan. 18. | Jan. 25.    | Feb. 1. | Feb. 8. | Feb. 15. | Feb. 22. |

The comparative receipts above stated are no criteria as to the business for the approaching scason. During the past two months, severe obstacles have been encountered by nearly all the roads named. Hence the reduced revenues in some cases when compared with 1855. These roads have now a highly favorable prospect for the next six months, and we are fully convinced that the year 1856 will exhibit results to all of them far beyond any previous season.

Railroad bonds, after various fluctuations, are quoted at nearly the same prices recorded a week since. There is more inquiry for Erie bonds of 1875, which are again quoted at 90; seven per cents of 1859 are again at par. For New-York Central sixes there is more demand for foreign account. Illinois Central seven per cents are in moderate demand. It was thought that the last steamer would bring liberal orders for leading railroad bonds; but, as yet, the European markets are not prepared to do much in American leans, nor will any marked change in this particular occur until a treaty of peace shall be fully ratified by the contracting powers.

The bond market is better sustained. Whether the railroad companies yield or not to their stockholders, the bonds of the leading companies are acknowledged to be substantial and reliable. Panama bonds are again at par. Illinois Central seven per cents have undergone scarcely any change since the opening of the new year. Pennsylvania Coal Company shares are again above par. Cumberland shares, under late advices, are approaching twenty-five.

We annex the closing rates for the past four weeks:

A careful examination of the details of the foreign advices, during the present month, leads to a conviction that peace will follow the propositions now under consideration. For a few weeks, at all events, this impression on the public mind will affect the current value of stocks here and in other cities. The more solid ones will rise and gradually approach the values to which they are legitimately entitled, as shown by their latest official reports. It is generally thought that this ad vance will be accompanied by renewed activity in business channels, and by a commensurate rise in property generally in our city. We look forward to a very active year, with a continued foreign demand for American breadstuffs and for cotton. Europe will still require, for the present year at least, all the surplus grain that we can export, and at remunerative prices. The whole field of commercial operations throughout the Union, offers the most flattering results for the employment of capital. The year 1855 was productive probably beyond precedent in this country. The present year bids fair to exceed the former largely. There is a steady but not active demand in Europe for American securities. These are now distributed among small capitalists, unlike former years, when they were in the hands of a few. The securities that claim the most attention abroad are Illinois Central bonds and Erie Railroad loans. Resding Railroad shares are among the most favored investments.

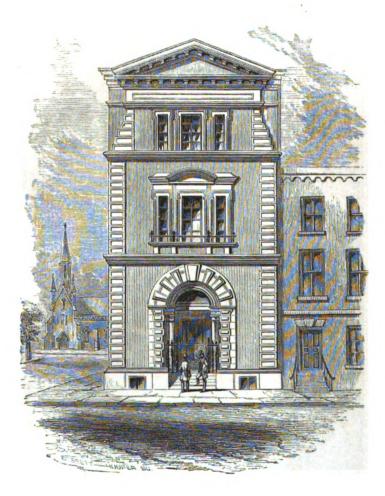

The stringency noted in the London market in January is considered as merely temporary and will have no effect here; the only unfavorable feature observable in this market is the advanced quotations for bills in Europe. These again approach the specie point, but we think the change is only temporary. There has been for some weeks a reduction in the export trade, in consequence of the difficulty of shipping produce. This will be remedied in a few days, and a resumption of the exports will occur so as to furnish a more liberal supply of bills on England and on the Continental cities. Bankers' bills on London are steady at 109½ a 109½, francs, 5.18½. The steamer of Wednesday last carried out \$700,000 in gold. We note a further reduction in the rates of discount on commercial paper, namely, 7 to 8 per cent for first-class paper, and 6 to 8 per cent for loans on call.

### DEATH.

AT PITTSFIELD, Mass., on Friday, February 22d, in the seventy-fifth year of his age, John Taylor, Esq., President of the Newark Banking & Insurance Co. for twelve years, until 1858. He conducted a large business with great sagacity and success. From 1842 until 1858, he was President of the Newark Banking & Insurance Company, and by the exercise of a skill truly remarkable, carried that institution from a most difficult position to its present prosperity. The sagacity, foresight, and diligence, with which Mr. Taylor managed his affairs, had their fit counterpart in the liberal views and benevolent designs with which he administered his wealth. He was a man of the most expansive charity, not only contributing freely to the great benevolent operations of the day, but, in a retired way, relieving the wants of the sick and the needy, more than the world can ever know. Many, very many, the whole community, had lost a friend; nothing in all creation, an enemy. It was a privilege to know such a man—a man so guileless, so sweet-tempered, so sympathetic and fresh-hearted, of such inbred courtesy, of such ingennous simplicity, so perfectly unspoiled by his labors and their rewards, so true to right, so trustful and icarless in God, yielding such joy and blessing in all the relations of domestic life, so noble and lovely in all things.

# THE USURY LAWS OF THE STATES.

There are propositions now pending before the Legislatures of several States, for important modifications of the usury laws. Public sentiment seems to demand that the severe penalties now enforced upon usurious contracts shall be done away with and that money shall become a free commodity among the people; in other words, that there shall be no restrictions as to the rates on loans. In Great Britain there has been since the year 1834, a virtual abrogation of the usury laws of that country: and a few months since these laws were by statute entirely repealed. We have no doubt that if such laws were repealed in this State, or essentially modified, capital would be more abundant: because many who now have money to lend will not loan it during a stringent market, beyond legal rates, and will keep it on deposit without interest rather than violate the law.

The following bill, intended to modify the existing law, in so far as to prevent the plea of usury from being a bar to the recovery of the original loan, (in which there may be justice,) has been reported in the N. Y. State Senate:

An Act to amend Title Third, Chapter Fourth, Part Second of the Revised Statutes, entitled, "Of Interest on money."

The people of the State of New-York, represented in Senate and Assembly, do enact as follows:

SECTION 1. No promissory note, draft, or bill of exchange, not having more than eight months to run, from the execution thereof, shall be

void by reason of any agreement between the parties to such note, draft, or bill of exchange, to receive pay or allow a rate of interest above seven dollars upon one hundred dollars, for one year, and at the same rate per cent for any longer or shorter period.

- § 2. Whenever, in any action brought upon any promissory note, draft, or bill of exchange, not having more than eight months to run, from the time of the execution thereof, as in section first of this act named, it shall appear by the pleadings or proofs in such action that a greater rate of interest has been received, paid, or allowed, or agreed to be received, paid, or allowed, on such promissory note, draft, or bill of exchange, the plaintiff in such action shall, nevertheless, recover from the defendant the amount actually paid, lent, or advanced, without interest or cost of action.
- § 3. If, before action brought upon any such promissory note, draft, or bill of exchange, as in section first of this act named, the maker thereof, acceptor or endorser, shall tender to the owner of such promissory note, draft, or bill of exchange, with interest thereon at the rate of 7 per cent, as in section first of this act named, and which said tender shall be refused by such owner, that in such case, upon any action brought to recover upon such promissory note, draft, or bill of exchange, the defendant may, by answer, plead such tender, and if upon the trial it shall appear that a greater rate of interest has been paid, received, or taken upon such promissory note, draft, or bill of exchange, than seven per cent, then, in such case, the plaintiff shall pay all costs and disbursements of the defendant in such action, and which, on motion, may be set off against the amount of the plaintiff's recovery.

§ 4. The provisions of this act shall not extend to, or in any way authorize any bank or incorporated company to take or receive, directly or indirectly, over 7 per cent per annum of interest on any loans or discounts made by any such bank or incorporated company.

§ 5. So much of title third, chapter fourth, part second, of the Revised Statutes, and so much of the laws of eighteen hundred and thirty-seven, chapter four hundred and thirty, as are inconsistent with the provisions of this act, are hereby repealed.

§ 6. This act shall take effect immediately.

Early last year we compiled and published a careful summary of the laws of each State in reference,—I. To the legal rate of interest. II. The rate of interest allowed, if any, on special contracts. III. The rate of damages allowed by statute on protested Bills of Exchange. IV. The law in each State in reference to sight-bills. As some changes have been made since then, or corrections furnished, the summary has been republished for the use of bankers, in the new volume of the Merchant's and Banker's Almanac, for the year 1856. As this volume is a multum in parvo that should be in the hands of every cashier and bank officer, as well as bank director, and as it is now in possession of three fourths of the banks in the country, it will be unnecessary here to recapitulate its contents. For our other readers it may be well to allude to some of the modifications that have been made in a few States.

I. Maryland.—There has been a decision by one of the higher courts, to the effect that usurious contracts are, by the laws of Mary-

land, void; but this decision, we are informed, does not meet the concurrence of the Bar. Hence the subject is entirely open, and as the new constitution of that State leaves the matter in the hands of the Legislature, it is to be hoped that the question will be now settled by that body. The forty-ninth section of the third article of the Constitution of Maryland fixes the legal rates of interest for the State, at six per cent per annum, and requires the Legislature to provide by law the necessary forfeitures and penalties against usury. Since this Constitution went into effect, in 1851, two sessions of the Legislature have been held, at neither of which was there any attempt made to comply with this requisition. It remained therefore for the members of the present Assembly to report such a bill as should be worthy of an enlightened commercial people, and beneficial to the interests of the State.

Upon this subject a Baltimore paper adds:

- "All commercial Europe has annulled the Usury Laws, and practical experience has acknowledged the wisdom of the measure. In twenty-one of the States of this Union, the statutes against usury have either been abolished wholly, or have been divested of their restrictive and obnoxious clauses. In not one of these States where the experiment of free trade in money has been fairly tried, has any desire been manifested to restore the ancient restrictions. It remained for a Senator of Maryland, and a Governor of New Jersey, to attempt the revival of a prejudice which has nothing to recommend it but its antiquity and its absurdity. If the Constitution of Maryland makes it obligatory upon our Legislature to provide by law forfeitures and penalties for any infringement of the statute, we ask that these fines shall be merely nominal. Beyond this no Legislature has a right to go, and they who, in their capacity of public servants, shall seek by stringent enactments to force capital from the State, or promote a violation of the laws, will be regarded no longer as public servants, but public oppressors, false to the trust reposed in them, and unworthy of the station they have been elected to fill."
- II. Georgia.—It was supposed by some bankers in Georgia, that no statute existed as to grace on sight-bills; but it appears that there was a statute passed in the year 1850, namely:
- "Three days, commonly called the three days of grace, shall not be allowed upon any sight-drafts or bills of exchange drawn payable at sight, after the passage of this Act; but the same shall be payable on presentation thereof, subject to the provisions of the first sections of this Act."—Act passed Feb. 8, 1850. [See Cobb's New Digest of the Laws of Georgia, pp. 519-522.]
- III. Louisiana.—By the act of 1855, it is provided, that interest may be charged at the rate of eight per cent. The act is as follows:
- "1. All debts shall bear interest at the rate of FIVE per cent from the time they become due, unless otherwise stipulated.—2. Article two thousand eight hundred and ninety-five, of the Civil Code, shall be so amended that the amount of conventional interest shall, in no case, exceed eight per cent, under pain of forfeiture of the entire interest so contracted.—3. If any person hereafter, shall pay on any contract a higher interest than the above, as discount or otherwise, the same may be sued for and recovered within twelve months from the time of such payment.—4. All laws contrary to the provisions of this act, and all laws on the same subject matter, except what is contained in the Civil Code of Practice, are repealed.—Act March 15, 1855."
- IV. Pennsylvania.—A legal friend has furnished us the following cases or points, as bearing upon the subject of interest. The penalties for violation of the usury law in that State are still very heavy—being, like that of New-York, a loss of the whole sum loaned. (See Statute, p. 56, Almanac.)

"In investments by building associations in loans to members thereof, the premium given for preference or priority of loan, shall not be deemed usurious. Act of 8 May, 1855, § 1, P. L. 519.

"A man may bona fide purchase any security for the payment of money, at the

lowest rate he can, without incurring the penalties of usury. 2 Dallas, 92

"Loans to railroads or canal companies, and bond taken for a larger sum than the

amount of money advanced, not usurious. Act of July 26, 1842, § 11, P. L. 434.

"Interest is a legal incident to every judgment. 4 Dallas, 252; 5 Watts, 464; 6
Watts, 53; 6 Binney, 437; 5 Wharton, 280; or decree of the Orphans' Court, 4 Harris, 151. Where a judgment is revived by sci. fa. the amount of principal and interest then due constitutes a new principal, and the plaintiff has a right to charge interest on the aggregate amount of principal and interest due at the time of rendering judgment on each sci. fa. 5 Sergeant & Rawle, 220; 5 Binney, 56; 5 Watts,

"Where more than legal interest is included in any speciality or note, the whole amount can not be sued for and recovered; but the plaintiff is entitled to a verdict for the just principal and interest. 2 Dallas, 92.

"The rule of law is, that interest is allowed on goods sold and delivered, and on all open accounts, where, by the usual course of dealing, or by express agreement, a certain time is fixed for payment; on money lent and advanced; on arrears of rent, unless it would be inferred by the landlord's conduct that he did not mean to insist upon it, or he demands more than is due, or there are other special circumstances which might make the charge of interest improper; and, generally, wherever one person detains the money of another, without any right and against his consent. 6 Binney, 162; 1 Ser. & Raw. 176; 1 Binney, 488; 1 Dallas, 315, 349; 2 ib. 193;

"A dormant partner is liable for interest, upon the receipt of the money, by an acting partner, without his privity or participation. 1 Dallas, 343, 2d edit.

- V. New Jersey.—This State presents the most anomalous law on the subject of interest—seven per cent being allowed in one portion of the State, and only six per cent in other counties. This certainly should be remedied so as to present a uniform law for all the State. So well satisfied are the people, that a liberal rate should be allowed, say seven per cent at least, that petitions to this effect are now before the Legislature.
- VI. Ohio.—A legal correspondent in Ohio, informed us that the summary published by us in 1855, in reference to that State, might lead some persons astray. He has therefore, furnished us the annexed memoranda, with other details, for which we refer bankers to the Almanac before mentioned.
- "I. Interest.—In the absence of any agreement as to the rate of interest, the law fixes it at six per cent per annum. Contracts stipulating for any other rate not exceeding 10 per cent per annum, are lawful, and may be enforced. Penalties.—There are no penalties for usury. Contracts for greater rates of interest are void as to the excess only, and if interest beyond the rates established have been paid, the debtor has a right to have such excess applied as payments on the principal.

"II. Bills of Exchange.—Bills drawn by a citizen of the State of Ohio on a person or body corporate in any other State of the Union, and returned under protest, are

subject to the payment of 6 per cent damages.

"III. Foreign Bills.—Bills drawn on any person or body corporate beyond the jurisdiction of the United States, and protested, 12 per cent damages.

"IV. Sight Bills.—No grace is allowed on bank-checks payable at sight. A statute is in force providing that 'all bonds, notes, or bills, negotiable by this act, shall be entitled to three days' grace in the time of payment.' The practice throughout the State is not uniform. In some places the banks allow grace on bills drawn upon individuals and payable at sight."

VII. California.—We took some pains to obtain accurate informa-

tion from California, as to the legal rates for loans, etc., and the following is the result:

"I. Interest.—The legal rate of interest in California is, by statute, fixed at TEN per

cent. On special contracts any rate of interest may be agreed upon or paid.

"II. Penalty for Violation of the Interest Law.—There is no law in California fixing any penalty for charging any rate of interest above ten per cent. The matter is thus left entirely free between the contracting parties.

'III. Damages on Bills.—The damages on bills of exchange drawn or negotiated in California, payable in any State east of the Rocky Mountains, and returned under protest for non-acceptance or non-payment, are uniformly 15 per cent.

"IV. Foreign Bills.—The damages on foreign bills of exchange returned under

protest are 20 per cent.

"V. Sight Bills.—Grace is not allowed by the bankers on bills, checks, drafts, etc., payable at sight. The notarial fees for protesting a bill of exchange or promissory note are \$5."

VIII. North-Carolina.—There is still some uncertainty even among bankers and legal gentlemen, as to the meaning of the phraseology in the statute as to damages on bills of exchange. The summary published in the Almanac, is from a legal friend; but it is still held by others, that the damages on bills returned for non-payment from Louisiana, for instance, are liable to ten per cent damages. As there is a codification proposed of the statutes in force, this subject will, no doubt, be more carefully elucidated.

IX. Missouri.—The Legislature of this State, at the session of 1854-5, passed an act allowing Ten per cent interest per annum by special contracts. This provision to take effect on and after January 1, 1856.

During a recent visit to Albany we noticed in some of the rooms of the Capitol several copies of a pamphlet written in 1836, by the Hon. John Whipple, of Rhode-Island, in defence of stringent usury laws. This treatise was first published anonymously, in 1836; was republished by certain parties in Albany, in 1850; and again appeared from a Boston press in 1855.

It is now put forth, word for word, as it appeared in 1836, quite regardless of the great changes that have since taken place in usury laws, and in the opinions concerning usury laws, all over the commercial world; unmindful, too, of the fact that our most wonderful accessions of specie, during the past seven years, have disturbed some of his illustrations as to the possibility of heavy capitalists sweeping up all the money, so as to "create an artificial scarcity."

Allowing the little demagogical flourish on the outer cover of the pamphlet to pass for what it is worth, we will offer some brief comments upon such portions of Mr. Whipple's part of the arguments as may not have been so fully noticed in our previous articles on this

When the various papers were drawn up by the parties now asking the New-York Legislature for a relaxation of our present usury law, this very pamphlet of Mr. Whipple was almost the only paper they had before them, whereby they could know what were and what were not the arguments or the allegations of their opponents. But for this book they would have had nothing to encounter, except a lit-

tle harmless waggery about the cannibal tendencies of certain Wall-street Shylocks for "pounds of flesh." This nonsense about "Wall street" they could have immediately brushed aside, merely by sending up the names of the thousands upon thousands of plain and practical business men, nearly all borrowers of money, who were petitioning for a relaxation in our usury laws. Not one money-dealer has, for several years past, taken any action, directly or indirectly, in this anti-usury law movement.

In March, 1855, Mr. Whipple published, in the Boston Daily Chronicle, a sweeping indorsement of his former paper, adding the random and most erroneous assertion, that nine tenths of the persons seeking for this reform were money dealers and money-lenders, and thereupon he indulged in some pleasantry at the singularity of "money-lenders" feeling it needful to invoke governmental aid to lessen prices, when the said prices were already within their own control. This humorous sally was essentially neutralized, simply by publishing immediately, in the same paper, a flat and positive denial as to the character and occupation of the memorialists. Mr. Whipple had been most grossly misinformed.

The leading positions taken by Mr. Whipple have been specifically met by the New-York Chamber of Commerce Report of October, 1854. His points are stated at pages 5, 10, 11, and 12 of that Report. It was also answered by other writers in 1850. The little incidental remark by Mr. Whipple, that "government has the power to convert certain shells into currency, and impart to them the same power, but not the same value, as gold and silver," was not noticed by the Committee, because they undoubtedly supposed such remark would never again be repeated.

If government can impart value to oyster-shells, for instance, by a mint stamp, it would really seem strange that the mint stamp of an eagle should always give about sixteen times as much value to an ounce of gold as the same device gives to an ounce of silver. We incline to think that such stamp was a certificate of value, and not the cause of the value of gold and silver. Governmental action enhances the value of gold and silver the exact cost of the artistic skill and manual labor in the process of refining.

This governmental uniformity in refining the metals is availed of by our silversmiths and general gold and silver workers in this city; hence the reason that these artisans are every day purchasing and working up gold and silver coins into useful and ornamental articles, and when they are made into fine chased-work, they will command from twice to three times their weight in coins. Still we cannot find the faintest vestige of that marvellous "governmental stamp" upon

the fine work referred to.

Mr. Whipple regards it as an *immoral* perversion to turn money from being used as currency. See pages 18, 20, and 24. He does not clear up this thought in a very lucid manner, but simply denies the moral right to take for money all we can get, or to lock up metallic currency in a warehouse. He may not, perhaps, be aware that our artisans in New-York are all the time buying up coin to make into

spoons and forks, and other articles of use or ornament. Now this is turning away coin from its "original purpose;" still we suppose he would not say that our spoons and forks were "shapen in iniquity and conceived in sin," because they were made of silver coin, which government had "created" to "measure value" with.

We cannot see any immorality in using our own money as we choose. To counterfeit or steal the article would, to be sure, betoken a wrong appreciation of morals, and so it would to cheat in our book accounts; but to say we commit a wicked act when we take eight cents instead of seven, for twelve months' use of a dollar, looks like

being "behind the age."

Mr. Whipple wrote his comments about usury a year before our law of 1837 was enacted. We cannot believe he has attentively read the provisions of that statute, nor is it probable that he is fully aware of the brood of vampire Shylocks who have germinated and thriven under its benighted influence. It is labor lost for Mr. Whipple, or any one else, to argue against the glaring facts which we can adduce as to the constant increase in the distress and embarrassment in raising money under all the pressures that have occurred since 1837.

Prior to that time, we may go back for a century, and find no rates of interest that will compare at all with the heartless grinding of the past three years. Why don't our usury laws stop this? Simply because no usury laws have ever been enforced since the earliest records of history, except temporarily, by feudal barons and robbers, against unarmed Jews, in olden times. If we must have stringent usury laws, even this feudal barbarism is more manly than to have a criminal law stand twenty years, that would cover with infamy any poor wight who dared to raise a finger to enforce it.

It has been said recently that because money possesses a debt-paying quality beyond any thing else, government should rule the price for its use. This is precisely like saying, "Because animal and vegetable food, with good water, all under the protection of government, have a life-preserving quality, government should regulate the price of our food."

"Money," says Mr. Whipple, "exists for the common good;" so, we say, do victuals and drink. Mr. Whipple presses into his service the most elaborate affluence of language to pile on the attributes, ad infinitum, that money possesses beyond any thing else in the world, making them all converge to his one favorite theory of governmental rule in price. We should probably assent to most of the differences that he declares to exist between money and ordinary merchandise, but, in doing so, we should turn them all into our strongest arguments for freedom in the movements of an article of such "exclusive functions." We attach no importance whatever to making out that money is or is not merchandise.

Mr. Whipple is an able lawyer, and knows perfectly well that it is spurious logic to deduce conclusions having no necessary connection with his premises. To say that government must rule one item of our property, because it is unlike all other items thereof, is a palpable instance of such false logic.

We fully concur in the benefit, or usefulness, of establishing some one rate of interest to govern when no contract between debtor and creditor can be shown; and this is all the peculiarity we can properly recognize in the legislative character of money.

One more, and the last, of Mr. Whipple's points, we will touch in conclusion. He attaches no small degree of importance to certain experiences of our new States out in the far West as showing the ill effects of freedom in currency, adding that such freedom in Indiana

and Wisconsin caused distress and embarrassment.

There is no doubt that they had their seasons of financial embarrassment, and it is equally probable that hard times and freedom as to rates of interest may have existed at one and the same time, and still no necessary connection between the two events. Men will push out into new States, and will, in many instances, go into speculations quite out of proportion to their means, and, as a necessary consequence, become distressed and embarrassed in their financial arrangements, no matter what law may exist in regard to the rate of interest. Hard times and liberal usury laws may exist at the same time, and yet no necessary connection between the two. We do not pretend to say that freedom in currency will for ever remove all danger and embarrassment of wild speculation; but we do say, and can verify with the most conclusive precision, that freedom from restrictive usury laws will lessen our chances for embarrassment and ruin. Such freedom will render the rates of interest much more free from violent changes, and the rates of interest will, at the same time, be gradually lessened.

If the experiences of Alabama, Wisconsin, etc., etc., are brought up against us, let him give us the laws of either of those States as they now stand, or, better than all, let him give us the usury laws of his own little State of Rhode-Island, where the forfeiture is only the excess beyond their former legal rate.

We shall, in short, be quite satisfied if our courts can say: "We will aid you in enforcing the payment of principal and seven per cent interst, you relying solely on the *honor* as well as the ability of the debtor for any thing he may have agreed to pay beyond that rate."

If our Legislature cannot feel willing to go so far as this, we must ask them to render the penalty for the violation of the usury laws only a forfeiture of all the interest charged on any usurious contracts, instead of the present penalty of fine and imprisonment and forfeiture of the whole sum loaned.

ANOTHER ROTHSCHILD.—Advices have been received of the death of the eldest brother of the house of Rothschild, at Frankfort, on the 6th ult. Baron Anslem von Rothschild is the third of the brothers who has departed this life in 1855—the head of the house in Naples, Carl, and the head of the house in Vienna, Solomon, having already died this year. Of the five brothers there remains now only James, the head of the house in Paris. Baron Anslem was looked on as the founder of the great financial Rothschild power, and, though possessed of less cultivation and education than his brother, was a decided genius in money matters; he died childless, and has left to the house a fortune of 30,000,000 gulden. The funeral took place on the morning of the 8th ult., and, though devoid of any attempt at external splendor, it was attended by more than one hundred carriages of persons to whom, during life, he had stood in so many varied positions of man of busines s, patron, friend, and benefactor, including all religions and confessions.

### THE ARCHITECTURE OF COUNTRY BANKS.

BY GERVASE WHEELER, ARCHITECT, NEW-YORK.

(Author of Rural Homes, Homes for the People, etc.)

A GREAT commercial country, like that comprised in the extended tract of the United States, requires banking facilities more extensive and places in which business may be transacted more numerous than do the closely-populated and smaller countries of Europe. To meet this want, an immense number of local banks has been founded, and as the building suited to the transaction of banking business necessarily differs both in arrangement and importance from what ordinary commercial purposes would require, an individual type may be assumed for the Country Bank, and it is worth while to consider in what the excellencies of a rural bank building should consist, and the true and simple means to secure them.

The defect in very many recently-erected banks has been, that they have neither had an individual character, nor yet one adapted to the circumstances of locality; generally a "New-York" front is clapped as a mask upon a very homely shell, and the building stands gaunt and alone in painful discrepancy with the rural nature of adjacent structures. The thought seems to have been, that, inasmuch as a great metropolis is the commercial centre of the section, its style should be copied in bank buildings equally with its modes of conducting business details. Not but that there seems an apology that a bit of city thought should be suggested by the architectural finish of a rural bank; for inasmuch as all the associations of such a building must supply reminiscences of the great central heart of commerce, the pulsations of which give and receive vitality from each distant country place—something of city style seems allowable; but this should be blended with other suggestions so that the whole may not

But in this, as in all conceptions of material art, the good, commonsense directions which honest attention to the uses of the proposed building, the material, and the site will suggest, are what must guide the designer of the plan of a country bank. There are no patent rules, no peculiarly appropriate style of architecture to fall back upon; the effort must be to secure an every-way convenient and sensible building, and then to give it such an appearance as shall be in harmony with its expressed intention, and capable of attainment without sacrifice of one single desirable feature, and above all without trickery or

The excellencies of a country bank may be classed as follows:

Simplicity of plan.

Durability and economy of mode of construction.

Security from violence and fire. Appropriate external character.

By the plan is meant the arrangement of the building and the distribution of its several portions and apartments. The nature of a

rural bank is usually two-fold—business and domestic; its latter character acquired by the frequent necessity of providing residence under its roof for a bank officer and his family. The necessary provision for the wants of the latter permits the building to have a wider spread upon the ground and a better-proportioned height than would the simple contrivance of rooms only required for banking business allow, and at the same time a more home-like character is imparted to the edifice, which makes its front in better sympathy with buildings around. The house itself may not differ in arrangement from what would otherwise be convenient, excepting in a better concentration of the apartments and in a safe separation of the two uses of the building. Upon the principal floor would be the banking-room, easily entered, with wide and commodious doors, and well-lighted vestibule, excluding external noise and cold; connected with this the offices of directors or other bank officers, with safes and strong closets, conveniently arranged between. The entrance to all these should be at once seen, and the plan of the floor readily understood by a stranger on his first entrance within the banking-room; indirect communication one room with another, and unintelligible arrangement of passages, being a most serious inconvenience in all public offices. For the rest, ample light and ventilation, the former in all cases so distributed that direct illumination of external windows may fall upon the desks of clerks within, and not on the backs of business visitors at the counter, as is only too frequently seen; and the latter achieved by simple attention to the rules that common-sense can point out, and requiring no elaborate apparatus or scientific directions to secure; these are all that in general terms can be insisted upon in calling attention to the arrangement of the plan.

In regard to ventilation, it may briefly be said that no plan is so simple and reliable as that which provides by the same apparatus warmth in winter, and circulation of atmospheric air in summer; and whatever the heating apparatus may be, whether steam, hot water, gas, or hot-air furnace, reject all in which the heat is radiated without admixture of large volumes of external air; for by a very simple law, no such heating arrangements will work unless are provided ducts even larger for the escape of the air than those which bring it in, so that whatever the heating source may be, where it consists of a supply of warmed fresh air, THERE must be ventilation, and by keeping all valves open, summer as in winter, a circulation of the atmosphere of the building will be secured. Of all furnaces the one recently patented by Boynton, of the firm of Richardson, Cox & Boynton, is the simplest and best, and with his mode of heating, and the large airflues and registers he delights in, a healthful ventilation is absolutely impossible to be prevented.

The modes of securing stability in buildings are now so well understood by able builders that no general rules seem necessary. One remark may, however, be permitted. It is a trite saying, that a good beginning makes a happy ending; in nothing can this so usefully be remembered as in a building, for of all its portions the foundations are the most important, and on various accounts they are only too liable

to be sparingly attended to. Not only the immediate effects of weak foundations should be guarded against, which as they are what all can appreciate, the cunning of the times usually contrives to build sufficiently firm, to at all events prevent these; but the slower ultimate, but still more dangerous effects of insufficient foundations should be thought of. Of these the gradual stealing of imperceptible ascending columns of dampness are the most to be dreaded: the capillary attraction of which all our building materials are capable; the extraordinary power of our summer suns, and other causes, tend to hasten a decay from this source which the present fast spirit of the age does not suffer buildings to stand sufficiently long for an occupant to even suspect. But the experience of other lands shows the presence of this silent and treacherous enemy, and the ravages he can make; and therefore it is worth while to guard against approaches, that it is hoped the longevity and permanence of intention of all well-conducted country banks

may render it an object to frustrate. The proper strength and thickness being given to the walls, their bases resting on firmly cement-bedded courses of solid stone, projecting three inches at least on either side beyond the bottom of the wall, let the builder always be instructed to leave what was called by old artificers an "air-drain," around the external face of walls buried beneath the ground. The readiest way to do this is to leave a trench two to three feet wider than would be required to lay the wall, so that the foundations may be finished from the exterior, (in itself of no slight importance,) and when the wall has perfectly settled and the cement-mortar is dry and hard, pave the bottom of this trench with flat or flagging-stones, and then fill up to within eighteen inches of the surface with broken stones lightly thrown together. This arrangement will greatly prevent absorption of dampness by the foundations, and its consequent dispersion throughout the superstructure by what is termed capillary attraction. English and French architects usually direct a course of slate, two to three inches in thickness, to be laid throughout the wall immediately above the ground, which, with the air-drain, may safely be relied on as preventing dampness and unsuspected destruction of the building.

Above the foundation, hollow brick walls have been by competent authorities so strongly recommended, it seems well to insist upon their use. Certainly, a cooler building in summer, one less easily chilled in winter, and one better adapted to resist the action of fire, is provided thereby; and it may be said, a stronger wall is given by the same number of bricks than would suffice for its solid construction, and a more architectural effect is secured by the additional depth thereby thrown into all reveals, and door and window openings. The loss of room is but little, as, if preferred, the masons may plaster upon the

inner surface of the walls without furring.

The use of slate as a covering for roofs is becoming now so general in this country, that it seems only necessary to point out the advantages on the score of durability and safety against fire, which a building so capped possesses over one otherwise finished. The objection that has generally held most force is from the liability to injury by

high winds; this can however be removed by better attention to the mode of laying—slaters generally not giving the slates sufficient underlap, and frequently contenting themselves with one nail. In Europe, slate roofs of the best class always were so laid that every slate had an overlap of two thirds of the depth of the course below, and was fastened with a wooden pin (usually of oak) and two copper nails; holes being carefully picked through each slate for these to pass through.

Of metal roofs the corrugated iron, so laid as to form a self-supporting arch without roof-framing or rafters, are the strongest, lightest, and best, though I have no personal knowledge of any roof so made in this country; in England is a roof so constructed, covering a building two hundred and twenty-five feet by forty, the roof of which is of bent sheets of corrugated iron, without framing or support other than

at the eaves.

For the protection of such buildings against depredation, ingenious mechanics have contrived various kinds of appliances in the shape of revolving shutters, impenetrable doors, impregnable locks, and such like, but experience rather favors the idea that Dickens's advice of "a little dog and a light," as about the most reliable after all; certain it is, an open shutter, gas brightly burning within, and a sharp little terrier that will bark, and run and hide himself, and keep barking in safety till his master wakes and detects the intruder, are less tempting to a burglar than the mystery and darkness of iron-bound vaults and ponderous doors and shutters.

To describe the mode of fire-proof construction now adopted by experienced builders, would require too much space, and in general the cost of the plan employed is so great that it is only in part that the principle is attempted to be carried out. There are, however, some simple precautions that every one may take, (and which, by the way, are as easily applicable to the plainest country dwellings,) which it

seems worth while to specify.

The most ready source and feeder of combustion, is in the air-passages within the walls and partitions formed by furring and studding out. Could those be filled, fire would be easily checked; or could the partitions themselves be of incombustible materials, the danger of spread of fire would be but inconsiderable. A very easily-applied mode of lessening this danger is in giving all the wood-work covered by lath and plaster, such, for instance, as studs, beams, and joists, a coating of incombustible material. To effect this, a mixture of alum, black lead, and lime white, may with confidence be used, and with the ends of all joists filled between with mortar, and all wood-work painted with any of the known fire-proof paints, the danger from ordinary sources of fire would be greatly lessened. Ordinary oil paints may be made what are called "fire-proof" by admixture of slacked lime, alum, potash, and common salt in certain proportions; and of the trials made in 1838, in England, in this connection, the best fire proof composition seemed to be that in which, with usual oil pigments, the above alkalies had been mingled.

The present fashionable mode, however, of burning a building is by

its furnace, a useful servant, which is usually overworked and not strong enough for his labor. Competition in prices has induced many vendors of furnaces to reduce the castings to such a dangerous thinness, that when the cold temperature requires them to be driven, the pipes become red-hot, and the miserably-built and treacherous fourinch-thick flues are soon burnt out, and the building is in flames. So, insist under all circumstances, not minding argument as to increased size of chimney-breast or added thickness of wall, that all flues shall have not less than eight inches thickness of wall around them on every side, more particularly in front, which coming as it does in contact with furring-out and timber, is most likely to prove the incendiary, should, from that source, the building be set in flames. In this connection might be told a funny tale of how a costly bank was nearly destroyed by fire from its ventilating flue, the wainscoting and floor against which were once charred and set in flames, and, but for timely discovery, would speedily have communicated in such a manner as to put the whole edifice in jeopardy; the foul air this flue was intended to carry off from directors' room below, must have been of a curiously gassy and explosive nature to have brought about such a result, or the ventilating shaft must have been in dangerous proximity to a fireflue.

The architectural character of a country bank must grow out of the circumstances affecting other buildings in the neighborhood. Of course, as durability is sought in the structure, only stone, brick, or iron can be used as building materials, and in these any expression common-sense will point out as suitable may be given to the exterior. Of the styles suited to present modern architecture, after all, only two seem really admissible; these are the classic Italian and the modern Italian. Both of these, however, are exhaustless in their variety, and an architect who cannot furnish designs for a whole city, each building different, and yet all of one common element of design, must be poverty-stricken, indeed!

Gothic, and the fantastic developments of rustic styles, now commonly in vogue, are inappropriate; the former, because, if honestly and fully carried out, requiring an expression of its details too positive in character to suit the manners of the present day; and the latter, on account of the lightness and fanciful nature of its architecture, rendering it unfit for the purposes of the building. The dead styles, as those of early Greece and Egypt, are, though from different causes, equally inappropriate, and although a very strict stickler for architectural propriety might insist upon such buildings being of Lombardic architecture, because to that people is usually assigned the honor of originating the system of Banking, it is not supposed the seekers for a plan of a country bank will be governed by any hypercriticism such as this.

The two designs for country banks that serve to illustrate these remarks, present an architectural character that will explain the style suggested as one of the many varieties into which the spirit of Italian architecture may be cast.

The one representing a building having a frontage of twenty-five

feet is intended to be constructed of brick with stone dressings, with brick cornice and stone members to the pediment on front.

In the centre of the front a wide and open archway leads to a broad stone platform, upon one side of which is the entrance to the bank, and upon the other the private door to the residence above. The peculiar features and advantages of this arrangement will be better understood by an examination of the ground plan presently following.

The rest of this façade is of great simplicity, the bold outlines of the windows on second and third stories giving to the design the effect that painters call "breadth." In the panel immediately under the pediment is a space in which the name of the bank may appear.

The side elevation may be described as partaking of the general character of the front; the lower windows are arched with boldly recessed and projecting brick-work around them, and the stone rustics of the front are returned round the corner as far as the moulded string-course under the window of the third story.

The second design is for a building the front of which occupies a space of thirty feet, and of this a view in perspective is given, showing the external character of both front and side.

In this an entirely different expression is given by the style, and the material may either be brick with stone, or entirely of stone, as preferred. Upon the side a break is made in the plan sufficient to destroy the otherwise monotonous appearance of so long a line, and serving to mark the separation between the business and domestic portions of the building.

The cornice is intended to be of brick and stone, contrived in such a manner as to be extremely strong and durable. The wide window in front, lighting the "check-desk" of the banking-room, is repeated in the side elevation, and would be found to have a very happy effect in execution, serving at the same time to mark the structure as a public building.

In this, the doorway to the bank is upon one side, and that to the house upon the other, giving an arrangement varied from that of the previous design.

The plan of the first design will be readily understood upon examination of its illustration. The letters marked upon it refer to its arrangements, and represent as follows:

No. 1 is the principal vestibule or open platform, which is enriched with Italian columns and antee, and has looking upon it in the centre, a wide window which may be filled, if preferred, with ground-glass, and serves to light the open space within the bank in front of the counter. Under this may be a desk for customers of the bank.

No. 2 is the lobby leading to stairs conducting to the house of the bank officer upon the upper floors.

No. 3 is the lobby corresponding to this, that opens into the banking-room, so arranged as to afford a well-lighted recess for a check-desk, and having double inner swing-doors to better insure the quiet and comfort of the interior of the banking-room. It is suggested that at night a porter might sleep in this room, as it is of ample size, and its situation would command a view, not only of the bank entrance, but

also that of the private door-way to the residence, and so secure perfect control over each.

No. 4 is the banking-room, a large, well-lighted, and airy apartment, having the counters so arranged, in reference to the windows, as to give the advantage of direct light for the clerks behind them, and at the same time ample illumination to other parts of the room, greatly assisted by the large window looking on to the platform in front, previously described.

At the end of the room is a safe divided into two compartments, one of which, No. 5, opens into the cashier's office, and the other, No. 6, into the space accessible by the clerks.

No. 7 is the strong-room or vault, securely made to resist both burglar and fire, and conveniently placed for access from the bank.

No. 8 is the cashier's room, having a sash-window towards the general room and a door into space rear of counter. Attached to this is an entry, No. 9, from which is a water-closet with dressing-room.

Rear of these is the directors' room, No. 10, a large and airy apart-

ment, well lighted and retired in situation.

No. 11 is the back staircase from cellar to this floor and to the floors above, and in this is No. 12, a lift-way from cellar to upper floors, conveniently placed for heavy weights to be raised to the several floors.

These references describe all the features of this floor. Below are spacious cellars with furnace-room, large vault, coal-cellars, etc., and in front may be an office or not as desired.

The upper floors contain the residence before referred to, and may briefly be stated to contain, in compact form, every convenience that domestic use and comfort could require. Amongst these, convenient shafts for dust, drain for waste water, ample closet and pantry appliances may be enumerated, together with suitable provision for ventilation.

The ground plan of the larger bank building having a frontage of 30 feet, differs mainly from that last described in the arrangement of the entrance; in other respects the distribution of the necessary portions of the floor is somewhat similar, and may be explained by the figures as follows:

No. 1 is the vestibule leading into the bank. No. 2 that attached to the private residence.

No. 3 is a large, well-lighted space in front with spacious desk for use of the customers of the bank.

No. 4 is the public room, the counters in which have the light from windows placed behind them; an advantageous arrangement secured in this plan equally as in that previously described.

No. 5 is the private hall, with stairway and passage-way belonging to the house above, separated from the bank by a fire proof brick wall, in which is a private door, so that the bank officer residing in the dwelling above may have access to the bank; this door is fire-proof. No. 6 is the passage-way leading to the private offices attached to the bank.

Of these No. 7 is the cashier's room, lighted pleasantly from above, and having sash-door into the bank and a window for answering inquiries of customers.

The strong-room, No. 8, is arranged as in smaller plan.

The directors' room, No. 9, is of large size and pleasant position.

Connected with this is a private dressing-room and water-closet, and from the passage, No. 6, is one similarly arranged for the use of the clerks.

There is likewise a porter's room and back staircase contained under the brick wall dividing entry to house from bank building.

Below this floor the cellar may be arranged as its uses will require,

the private entrance to this being at the side.

Above, the two floors comprising the dwelling allow of domestic accommodations on a liberal scale, and it is suggested, that connected with them should be a pleasant and well-provided reading-room for the use of the various officers of the bank.

The dimensions of the several divisions of these plans have not been detailed, because the size of the banking-room itself will govern all the other measurements, and must depend upon the amount of business it is required to accommodate. Any remarks as to cost, too, would be necessarily so entirely general, the plan merely of what a country bank of the different frontages supposed, may be, is all that it seems useful or prudent to offer. Further particulars can only be gained by consideration of local and individual circumstances: so to the examination of those interested in the architecture of an American Country Bank, these designs are trustingly confided.

LAW OF LIMITED PARTNERSHIP .- The government bill to amend the law of partnership in Great Britain, has been printed, together with the bill for establishing limited liability on the part of public companies. It provides that loans may be made to persons in business under an agreement to share profits, without subjecting the lender to any further liability, upon due registry being made of all the particulars of the transaction in a form to be approved by the Board of Trade, and to be advertised in the Gazette. In case of bankruptcy or insolvency, such lender is not to recover any thing until all the other creditors are paid in full, and he is to be liable to repay any amount he may have received, either in the shape of profits or as a repayment of principal, within the preceding year. Agents and servants may also be allowed to receive profits in lieu of wages. Neither of the acts are to apply to Scotland. In the short analysis of the limited liability bill, it was mentioned, that, according to report, any public company formed by its authority would be required to have a capital of not less than £20,000, in £25 shares, with £20 paid up; but the clause on this point in the printed bill states that 20 per cent on each share is the sum thus required. Both bills have the merit of great simplicity and breadth, and are likely to be received with favor by the commercial classes. They restore to the public the right to lend their money or to give credit upon any terms-that their own sagacity may dictate, the law merely fulfilling its natural function of taking care, by the enforcement of proper measures of publicity, that these terms shall be clear, and that no one shall be led to act except with his eyes open. Whether the first abandonment of the paternal system which "protected" the public by virtually prohibiting them from giving trust, except in particular modes deemed safe by the Legislature, may lead to some instances of folly, is a question on which different opinions will, perhaps, be entertained; but there can be no doubt as to the wholesomeness of the permanent results to be anticipated from throwing off artificial restrictions condemned by the concurrent experience of almost every other nation, and shown by unequivocal evidence in this country to have long defeated the very object for which they were established.

## BANKING IN MASSACHUSETTS.

Annual Report of the Bank Commissioners. 1856.

To Hon. Ephraim M. Wright, Secretary of the Commonwealth:

The Bank Commissioners have the honor herewith to present their

Fifth Annual Report:

The number of incorporated banks within the Commonwealth on the 31st of December, 1854, was one hundred and seventy-two, inclusive of the Cochituate Bank, which corporation still exists, under the qualifications of the general act, though it remains in the custody of Receivers by an order of the Supreme Judicial Court, heretofore adverted to by us. The progress made in settling up its affairs will be seen in the Appendix, (A.)

The number actually in operation at the above-named period was 167. Four new banks have since been organized, namely: the Northborough, the Provincetown, the Monument, and the Martha's Vineyard; so that, excluding the Cochituate, the number of banks now in opera-

tion in the State is 170.

The amount of bank capital actually paid in on the first Monday of December, 1854, was \$57,103,843, to wit: in Boston, \$32,152,525; out of Boston, \$24,951,318.

At the publication of our Fourth Report, portions of increased capital previously authorized had not been called in, which have since been contributed. The following-named banks have been authorized the present year to increase their capital stock, upon condition that the addition be paid in by the first of May, 1856:

| Brighton Market Bank, Brighton,    | <b>.,\$</b> 100,000 |
|------------------------------------|---------------------|
| City Bank of Worcester, Worcester, |                     |
| Fairhaven Bank, Fairhaven,         | 100,000             |
| Marine Bank, New-Bedford,          | 100,000             |
| Milford Bank, Milford,             | 50,000              |
| Ocean Bank, Newburyport,           | 50,000              |
| Rockport Bank, Rockport,           | 50,000              |
| Union Bank, Haverhill,             | 50,000              |
| ·                                  |                     |
| Total,                             | \$600,000           |

Charters were also granted this year for two local banks: the Cape Cod Bank, at Harwich, the stock to be paid in by the 10th of May, 1856; and the Cape Ann Bank, at Gloucester, the stock to be paid in by the 1st of May, 1856; the former with a capital of \$100,000, the latter with a capital of \$150,000; making, with increase of capital to pre-existing institutions, an authorized addition of \$850,000. Besides this, a capital of \$3,000,000 is granted to the Bank of Mutual Redemption, to be further spoken of.

| Increase in country banks,      | .\$1,273,682 |
|---------------------------------|--------------|
| " Boston,                       |              |
| Total increase within the year, | .\$1,831,157 |
| 50                              |              |

With the additions above referred to, of this year, the banking capital of the State is at present composed of

| Capital of Country<br>Boston, |      |                     | \$26,225,000<br>32,710,000 |
|-------------------------------|------|---------------------|----------------------------|
|                               |      |                     |                            |
| Total                         | <br> | • • • • • • • • • • | \$58,935,000               |

Besides the Cape Cod and Cape Ann banks, before spoken of as having been chartered the present year, an act was passed May 21, 1855, whereby the Bank of Mutual Redemption was incorporated, for the term of twenty years, to be located in Boston, with all the powers and privileges, and subject to all the restrictions and liabilities set forth in the general banking laws, under certain exceptions. The organization of this corporation has not yet been effected, though several meetings of the corporators and others interested therein have been held. Copies of the Act in question and of circulars from the Committee, indicating what steps have been taken, will be found in the Appendix to this Report, marked (B.)

This institution is of course designed, in a measure, to do the present work of the "Suffolk," in behalf of other banks. Our views of the Suffolk Bank system, as expressed in our Second Annual Report, remain unchanged. If the proposed bank should go into operation, it is to be hoped that the two will act in harmony with reference to their great objects. The powers possessed by the one, and contemplated by the other, are very great, and so long as they are discreetly and impartially exercised, will be salutary in their effects on the currency. No institution should be indulged beyond its own corporate merits, and none dishonored under circumstances likely to create unnecessary alarm or distrust.

It will be noticed that an amendment of the charter of the new bank is to be prayed for, with a view, among other things, to its being exempted from the payment of a tax to the Commonwealth. It may be worthy of consideration how far such a change would operate as "the granting of any new or greater privileges," that might induce other banks in operation at the time of such grant, to claim to be en-

titled to the same privileges, under the 69th section of the general banking law.

It has been determined by a majority of the Boston banks to establish a Clearing-House in this city for the settlement, daily, of balances arising between them. The plan proposed is like that adopted in New-York City, which, after the experience of two years, is found to answer the expectations of its originators in facilitating the objects had in view by them. Measures are in progress for a similar agency here, which, it is supposed, will be completed about the 1st of February next, and from which the same beneficial results are anticipated.

This commission is required to visit every bank and savings bank "at least once in every two years," and to examine every new bank, and every bank whose capital has been increased, within a year after they "go into operation" or "after the stock shall have been paid in," respectively. We have, in most cases, arranged that where there has

of the Legislature.

been an increase of capital, the special examination thereby made necessary, should be comprehended under the general one. The Bolyston and the Grocers' Banks are exceptions to this rule; because, in the former case, the increase was obtained subsequently to the date of the regular visit, and the period of one year from the date of payment of the same into the bank would expire before the commencement of a new term; and, in the latter case, \$100,000 of the new capital having been paid in, it was understood that the bank would not avail itself of any further addition, though the entire increase authorized had not been taken up. A further sum, however, was afterwards called in, so that a formal visit remained to be made to that institution, as well as the biennial one that would be due in course. But we shall notice this bank more at large in a subsequent part of this Report.

In this connection it may be proper to remark, that several banks have failed to take the benefit of all the increase of capital permitted by special acts in that behalf. In such case, we have supposed it to be optional with the banks to call in a portion only of the increase, omitting, as has sometimes been done, to call in the balance; the right to do which, at all, lapses after the expiration of a year from the approval of their respective acts for that purpose. At any rate, a condition to that effect has uniformly been inserted in such enactments

Furthermore, upon the subject of general visits required to be made to the banks, the Commissioners interpret the law as requiring them to make such calls once in every term of two years, and not as prescribing an interval of just two years between the visits. This commission was established in 1851, and the second biennial term expired in May, 1855. Within each of such former periods, all then existing banks and savings institutions were examined; and, if care should be taken to make the visit in each case after an interval of two years, an almost exact rotation would be the consequence—a course of procedure obviously to be avoided. On the other hand, by construing the rule as requiring a visit to be made in every biennial period, we are enabled to make these investigations conformable to what the circumstances of each case may seem to demand; so that, during the present term, an institution may be passed over to a late day, which had been examined at an early part of the foregoing term, and thus the interval be extended considerably beyond two years.

We have been somewhat minute on this point, which would not otherwise seem to have called for particular explanation, because an opinion prevails to some extent among bank officers that the law of 1851 contemplates a more regular recurrence of the formal examinations

It should be remarked here, that very many official calls by the Board and, by individual members of it, have been made, during the past, as well as former years, upon both classes of institutions, as occasion appeared to make it useful or proper to do so. And frequent statements from them, more or less in detail, have been forwarded to us, in response to written requests for the same: and it may be said

here, that information thus wanted, from time to time, whether applied for personally or otherwise, has been furnished very fully, and generally with great promptitude. Our inquiries have almost uniformly been met, by all interested, with apparent frankness, and, of course, the objects of these inquiries have been thereby all the more speedily as well as easily attained. Our official calls, made as they always have been, without notice to the parties, and therefore without regard to their ordinary business, however urgent it might be, have never been embarrassed by unnecessary delays or obstructions, and the officers have always been found at the post of duty, with one or two exceptions, in which cases reasonable or necessary causes of absence were found to exist.

The objects of these occasional calls upon the institutions of both classes will be readily comprehended, and their importance appreciated by persons conversant with banks, who understand the extent of their powers, and are disposed to reflect upon the possible utility of timely interposition to avert tendencies to excess of any kind, and to effect, by admonition or otherwise, the curtailment, as we have done in some cases, and the entire omission, in others, of the proposed payment of dividends which would be incompatible with their condition.

During the year 1855 the Commissioners have made formal examinations of eighty-one banks and forty savings institutions, besides the occasional visits referred to, for various purposes, of which no special record has been made.

It is proper here to make mention of such acts as were passed at the last session of the General Court, in reference to banks and banking.

By statute, 1855, chapter 91, the provisions of the act of 1838, (that bills of exchange, drafts or promissory notes, becoming due on Sunday, on the annual Thanksgiving and-Fast days, or on the Fourth of July, shall be payable on the day next preceding such days respectively, and may be noted or protested for non-payment on such preceding days,) are made applicable to Christmas-day and the 5th of July, when the 4th occurs on Sunday, notice of the dishonor of such paper not necessarily to be given until the day next after such Christmas or 5th of July.

The 6th section of the act of April 15, 1854, requiring of the banks to make weekly or monthly returns to the Secretary of State, was so far modified by act of March 26, 1855, that every bank out of Boston neglecting to make any such return, shall forfeit \$25 to the use of the Commonwealth; and, if such neglect continues for ten days from the first Monday of the month, a forfeiture of \$500 is incurred, unless it shall be made to appear, to the satisfaction of the Secretary and Treasurer of the Commonwealth, that the returns were duly made and deposited in the post-office of the place where bank may be located, properly addressed to the Secretary of the Commonwealth, and that there was no neglect on the part of the officers of said bank. The penalty of \$500 imposed on Boston banks by the 6th section aforesaid, is still incurred, under the act of 1855, for each and every neglect to comply with the provisions of the other sections of said act of 1854.

By an act passed April 6, 1855, "relating to the organization of

corporations," it is provided that the first meeting of all corporations shall (unless otherwise provided for in their respective charters) be called by the person, or a majority of the persons named in the act, in the mode indicated in the 3d section of the 44th chapter Revised Statutes; and the persons so named in the act, and their associate subscribers to stock, prior to the date of their act, shall be considered the persons authorized to hold the franchise or privileges granted until

the corporation shall be organized.

The first section of an act passed April 10, 1855, directs any sheriff, constable, police officer, or other officer of justice in this Commonwealth, immediately to seize and take possession of any false, forged or counterfeit bank-bills or notes, or any plates, dies or other tools, instruments, or implements used by counterfeiters, or designed for the forging or making of any false or counterfeit notes, coin, or bills, that shall come to his knowledge, and deliver the same into the custody of the court of record having jurisdiction of the offence of counterfeiting, in the county where the same may be, that the court may cause the same to be destroyed as soon as the ends of justice will permit.

The second section of the same act requires that whenever the charter of a bank shall expire or become forfeited, or the bank be closed for any cause, the directors having been last in office shall deliver up all their plates and dies forthwith to the court described above, within the county where the bank shall have been located, to be disposed of by the court in a way to prevent their being afterwards

used for any unlawful purpose.

The requirements of this section are enjoined on said directors, under a penalty of \$500, upon any member who shall neglect or refuse to

comply with them.

The act approved April 21, 1855, imposes a penalty of \$50 for every offence upon the cashier of any bank, or the treasurer of any savings institution in this Commonwealth, who shall refuse or neglect to make the returns to assessors of cities and towns in this Commonwealth, in which borrowers of money on certain collateral security there-

in named may reside, or who shall falsify such returns.

The returns from the banks continue to be made to the Secretary of the Commonwealth, and by him promulgated with great regularity; and their appearance is regarded with so much interest, that the public would hardly consent now to dispense with them. This attention to them awakens criticism, which suggests alterations or amendments for the purpose of greater certainty of detail and uniformity in arranging the different particulars. The banks frequently make loans to each other; and, sometimes, with the understanding that they are to be on time—and that, to sister institutions in other States. If these debts are allowed to be considered in the light of bank balances, and so excepted from the class of debts to a bank which compose its loan, we suppose they will be as well entitled to a place in the returns to the Secretary, under the head of "balances due from other banks"—which ought to consist only of immediate resources—and which, alone, in a well-regulated bank, would have place in such a summary.

We have never believed it was the design of the Legislature or the

policy of the law to make the exception in question, in favor of any bank balances not subject to immediate draft; and, consequently, we consider such balances as appertaining to other debts due to a bank, that is, to the loan. In several instances, we have caused such items to be taken from the "bank balances," and placed where they appropriately belong. But if bank officers can persuade themselves to make oath to the truth of this branch in the returns, we cannot comprehend how mere memorandum-checks can truthfully be deemed cash items, and, in that way be denominated bank balances, like bona-fide checks on, and bills of, other banks, which are instructed to be so.

We heretofore glanced at the fallacies presented, to some extent, by the returns in these respects. Memorandum-checks, so called, are a species of promise by no means common, and which no bank ought to hold; for any thing of that nature should be suffered only on the strength of ample collateral, and then be known as demand-loan—which, at best, is perhaps a feature of doubtful propriety in any bank. The purity of these returns should be carefully maintained; and it is worthy of consideration how far they may be so improved by further legislation, and the requisitions made so plain that the introduction into them of vicious elements shall be an offence in law, and punishable as such.

To return to the practice with banks of borrowing of each other on interest—we recommend that no loan should be made to another bank any more than to an individual, without the transaction is regularly passed upon by the directors, and entered in the loan, like any other discount. Without this, the true state of the bank cannot be known to the public. Indeed, it may be entirely misapprehended, and an impression far from the truth be made by the returns. If a bank has a loan proper of \$150,000, with \$50,000 due from other banks, on which it is taking interest, and the latter sum is reported under the head of bank balances instead of loan, the bank is enjoying a credit to which it is not entitled, and is considered rich in resources at hand which it does not possess. A consequence is, that its own means being thus disposed of to another, and perhaps a weak institution, it in turn becomes a borrower—till, this facility of obtaining means from other similar sources, leads to an expansion much beyond what would be afforded by the legitimate use of its own capital; and the result is its sudden disability to meet the demands of the public, which are all the more urgent when it is discovered or believed that it has been pursuing a course not conformable to the common ideas of just banking principles.

The Commissioners are required to report, annually, of the "general conduct and conditions of the corporations visited by them." The latter duty is accomplished, in respect to the banks, by the publication of the foregoing abstracts—from all which, as well as from our observation in other respects, we are warranted in stating that, generally, the administration of the banks has improved: still, many practices exist, which are at variance with prudent counsels, and will be made the subject of special comment in the progress of this Report. But most of the objections we have to make to the "conduct" of banks are

such as we have frequently urged on the public. The attention of stockholders, as well as the community, has often been invited to topics of great interest to them; but little heed, however, is paid to such suggestions. Those most interested are often regardless of the annual meetings for the choice of officers; and, so long as dividends are regularly made, seem willing to leave the affairs of a bank in the hands of a set of men who virtually reëlect themselves for a series of years. In several cases, we have witnessed the efficacy of examinations by stockholders—and we are persuaded, that, if investigations could be had more frequently, by committees of the corporation, the management of such banks would be sensibly renovated. We have exhorted the proper officers of savings banks to take part in the meetings of stockholders of banks in which they may be interested, as a step likely to be beneficial to both institutions. Some banks commit themselves to the smallest number of directors allowed by law—and, in the end, such institutions fall into the hands of a mere majority, and thus the power over them, as it is wont to do in all the affairs of men, is suffered "to steal from the many to the few." Large banks are not prudently intrusted to a board of five directors—and large or small ones, with only that number, are liable to have their organization interrupted by casualties; the only corrective for which is the intervention of a special meeting of the corporation.

We have remarked very fully on several occasions, and particularly last year, upon the disposition of some of our banks to indulge in remote loans, under the temptation of heavy rates of exchange and a promising circulation. We have stated, heretofore, to the public, our belief that these experiments would end in losses to the adventurers, and the result has been that dividends have necessarily been passed, this year, by several banks, and thereby a penalty suffered for risks too great to be encountered by well-disposed and well-ordered institutions. Happy may they feel, who escape such danger, with a capital intact. The lesson may be useful in bringing them back to the path of duty. Banks must expect to look such losses in the face at once—without deluding themselves with an over-estimate of suspended paper. The actual profits of a bank are alone the basis of a dividend—and these can be reaped only from the field of an ac-

tive loan.

We are persuaded that a persistent course of incurring risks of the kind referred to, renders a bank obnoxious to the reproach of hazarding the public. The claim set up, that the charter is their own, and that they can use it and bank under it, in these respects, at will, would not, we suppose, avail them in a court of chancery. They are rather public than private corporations, and need to be restrained by the arm of the law, when found travelling without their proper sphere. However broad and clear their rights may be, under their charters or the general laws, they can only be exercised in subordination to the public interests, and in a way not to interfere with the rights of others.

In this great matter of the conduct of the banks, almost insepara-

ble from their general condition, the public has an interest in knowing how stands their loan, and of what it is composed. Very many institutions have pursued the even tenor of their way, supplying as they might the offerings within their own circuit, made up of commercial paper growing out of the pursuits of trade: so far they merit commendation, and but little uneasiness is felt on their account. Exceptions exist to this remark in some quarters, where the loan is so composed as to need the more watchful scrutiny of the Commissioners, who will appreciate as well as they can the securities brought in from abroad, and will aim to apply such restraints within their reach, from time to time, as the exigency may demand.

It has been a common and a true remark during the past year, that the banks have been very much extended—and that, too, at a time when the money market has been much easier than at present. But extension upon the basis of business paper is a very different thing from distension created by speculation upon mere capital—that is, loans upon stocks, instead of discounts of promises representing something that has an intrinsic value. If, then, the bank accommodations are, in any degree, replaced by such as are based on the sale of commodities, and speculative paper has yielded to purely commercial negotiations, in so far has the condition of the banks been materially improved—and such changes have, to a considerable extent, been witnessed.

Many of the best banks do not disclose by returns such abundant immediate resources as they in fact possess—much that is instantly available being in the form of demand-loan, readily convertible into cash. But, however beneficial this class of assets may be to an institution standing by itself, the current of public opinion seems to run against them as a common practice among the banks. If they become general, a sudden retrenchment of them may become general too. No doubt this has occurred to a great extent the past year; and, involving as it has, the contraction of loans on stocks, (all of which had probably reached their highest point,) has with many minds accounted for the great stress upon the market. We look upon such an opinion, with some modification, as entitled to consideration—and the system of demand-loans is to be deprecated. The essayists have their favorite theories about the pressure of the times, and some of them give special prominence to the agency of the banks in this respect. But we do not view the banks as omnipotent for good or for evil; there are many financial "ills that men endure," which banks, with all their appliances, can "neither make nor cure." Still, they too often adopt a line of policy which tends to aggravate rather than relieve the necessities of the community, for whose benefit they were created, and which first they should aim to accommodate. In hard times, this demand-loan gives added weight to burdens already grievous to be borne—and, at all times, the exaction of exchange is felt to be graduated by a scale established by the banks, and not by the public. But, while running the race in which all are eagerly bent on their own emolument, there is, perhaps, too little regard had to

the condition and wants of individuals. Banks had better substitute for this demand-loan, paper so timed that it will turn up at proper intervals to relieve their circulation without surprising the public; and as for exchange, the Legislature, by prescribing the extreme rate of bank profits, would establish a certain and doubtless more satisfactory rule, for an arbitrary and capricious one.

A very common intimation is made that the State is too exacting in its tax upon banks, and that this compels them to look for remuneration, to some extent, from their customers. But bank charters carry with them privileges of no ordinary character; and a bank, with prudence and economy, may divide six or seven per cent per annum, enough to satisfy all but the demands of avarice, and pay its

tax and expenses besides.

Banks complain that the five per cent rate of interest, allowed by the State on its own bank loans, is unreasonably low. This complaint, we think, is just—especially as the Commonwealth reserves the right to make its calls without regard to the state of the market or of the bank. We shall, perhaps, allude to the subject further in another

portion of this Report.

But if the banks fail at times to deal generously with the community, they in turn are apt to lack sympathy when it is most needed. Though we have a signal exception to this remark, of recent occurrence among us, which will be noticed hereafter. Panics arise with hardly a visible pretext—and, at such times, it is not uncommon to hear complaints of bank exactions where least expected. And yet our banks sustain the shocks of common rumor and apprehension, with a steadiness which is indicative of their strength, and inspires a degree of confidence; while the events of the past year should remind them of the tenure on which they hold it, a just and reasonable regard to the expectations of the public with reference to its own security and their stability.

In this connection, and it is quite time to reäffirm it, some of the panks keep too little specie. A proposition was before the Legislature not long since, for requiring them to keep on hand a certain amount of specie, in proportion to their capital, under a prohibition against discounting when the proportion should be reduced, and until

it should be restored.

The Special Board of Bank Commissioners, appointed under the act of May 2, 1849, who were required "to make a careful examination of the laws of this Commonwealth relating to banks and banking," and to report what alterations should be made in said laws that should be mutually advantageous to the banking institutions and to the community, made particular reference to this branch of their duty. The country banks have latterly held but about one million in specie, with a capital of more than twenty-six millions—and the city banks an average of about three millions, with a capital of nearly thirty-three millions—and with all the admonitions of the past, there are several institutions too regardless of the great theory of our banking system in this respect. Many of them have specie funds at proper

points which are presumed to answer the purpose of specie in vault. But the example of a slender exhibit by them in this particular, is followed by banks that do not imitate their more favorable characteristics; and thus, in the aggregate, the precious metals are too much dispensed with. The language of the former Board of Commissioners, just referred to, on this point, is as follows: "It is believed by the Commissioners that the rights of bill-holders would be more secure, and the derangement caused in the money market by a sudden call of the banks on each other for specie balances, would be less injurious in effect, if the banks were required to keep their vaults a greater amount of specie in proportion to the circulation than the banks do keep."

The application of a rule for the regulation of the proportion of specie to circulation, was deemed a matter too difficult—but the report proceeds to recommend the requisition that banks should keep an amount of specie on hand bearing a fixed proportion to their capital under the above-named prohibition. See Senate Doc. 6, 1850.

A Report is expected in January next from the Association of Banks for the Suppression of Counterfeiting. It is represented that ten convictions have been obtained this year, the aggregate of the sentences being thirty-four years and two months, and that twenty persons are now under arrest through the agency of the Association; and that the whole number of sentences so procured the preceding year was sixty-four-in consequence of which, the frequency of the crime has greatly diminished. It is estimated that the circulation of counterfeit money has been reduced to one fourth the amount existing prior to the efforts thus made. If such be the case, there can be no doubt of the propriety of continuing the aid of the State, for the suppression of the crime in question, beyond the period at which the present annual allowance for that object will expire. The number of banks on the list of associates the last year is 136 in Massachusetts, 129 in the other New-England States, one in New-York, and one in Canada—showing an increase of 46 banks over the list of the previous

By the second section of an act passed April 13, 1838, it is provided, that any bank which may avail itself of the provisions of the preceding section, (for surrendering its charter,) shall be exempted from liability to pay the bank tax from and after the time a majority of the Bank Commissioners shall certify to the Governor that said bank may, with safety to the public, proceed to close its concerns, under the provisions of the 7th section of the 44th chapter of the Revised Statutes. Since the passage of this law, the Board of Bank Commissioners then existing has been abolished; and it is considered very questionable whether it is competent for the present Board to make the certificate referred to, if a case should arise to call for it.

By the banking laws of this Commonwealth, (chapter 36, section 61,) every bank is required to redeem its notes and bills in "specie," or in gold "and silver money," section 29. By recent acts of Congress, the new silver coin is not a legal tender beyond \$5, and the

three-cent pieces only to thirty cents. A question has been raised, whether it is competent for the banks to pay out this silver coin to redeem their bills beyond the above limits, to which it is confined by the United States laws as a legal tender.

By the Constitution of the United States, Congress has the power "to coin money, regulate the value thereof, and of foreign coin, and to fix the standard of weights and measures." We take it, therefore, banks can only offer a "legal tender" for the redemption of bills, and can no more pay out silver change therefor, beyond the extent fixed on as a "legal tender," than they can pay out foreign coins, whose values are not so fixed by authority of the United States. (See Appendix, C.)

A distressing occurrence within the past year, (the suicide of the late paying-teller of the Merchants' Bank, in this city,) besides giving rise to much interesting speculation, has revived the discussion of the subject of certified checks, or checks marked "good," by officers of banks, without authority to do such an act. Our banks have disavowed any sanction of such a procedure, and it was supposed the practice in Massachusetts had been discontinued since the exposition made of the law in reference to it by our Supreme Judicial Court.

It has been decided, and, we thought, clearly understood, that the teller of a bank, as such, had no authority so to certify a check as to bind the bank to pay the amount thereof to any person who might afterwards present it, and the "usage" for him so to do, to enable the holder to use the check at pleasure, has been pronounced "bad." Taking it for granted that these views were generally entertained in bank circles, it would seem that the mere presentation of such a check is calculated on its face to arouse suspicion of its character, and occasion inquiry as to its motives.

The late paying-teller of the Merchants' Bank did certify checks of the foregoing description to a very large amount, say two checks of \$25,000 each—which were afterwards cashed at the "Grocers'" and the "Atlantic" Banks respectively. These transactions have given rise to suits at law, to determine whether the loss occasioned by these checks, falsely certified by the paying-teller of the Merchants' Bank, to be good against the drawers of them, shall fall upon said bank, or upon the other two banks above named. We should refrain, as much as possible, from anticipating what points will be raised, or what final disposition will be made of these cases; but, it seems so surprising that any subordinate bank officer should presume to receive checks of this character, and for sums so large, that it has been an object with us, if merely for general purposes, to ascertain, if we could, who authorized these payments. The tellers in each case declare that they acted under direction of the cashiers, which is denied by the last-named officers absolutely in one instance, while in the other, that of the Atlantic Bank, the cashier allows that he assented to the payment of a check by the teller, though he avers neither the amount of the check, nor the drawer's name, nor any of its peculiarities were made known to him. It occurred to us that it became the directors of both institu-

tions to fix, as nearly as possible, the degree of culpability attaching to the various parties implicated, with a view to exemplary action in the premises.

The Cochituate Bank, of this city, upon which an injunction was served April 15, 1854, is still in the hands of the receivers, by whom its concerns are being closed, under the direction of the court. Our preceding report contained a review of the circumstances attending the downfall of that institution, and of its condition afterwards, as disclosed by the receivers. A dividend of fifty per cent had then been ordered to be paid to the creditors. The progress of this work to the present time is indicated by notices to be found in the Appendix hereto, marked A—whereby it will appear that a further dividend has been ordered, and the first of April next fixed by the court as the day on or before which claimants against the bank must present their demands, or the same will be for ever barred.

We come now to speak of the Grocers' Bank, of this city. It has for some time been apparent that the transactions of this institution were too extensive for its capital, and the diminution of the number of its directors a year ago was by no means calculated to strengthen its hold on the confidence of the public. More recently, when reduced to the necessity of appealing to its neighbors for aid, there was a general disposition manifested to afford relief so long as it was presumed that its embarrassments resulted merely from an imprudent management of its affairs. Indeed, the merchants, as well as banks, came forward with alacrity to rescue its credit, and reassure the public re-

specting it.

The Commissioners have not doubted, and so expressed themselves, that the needed succor might be afforded the bank with entire safety, provided the books indicated truly the extent of its liabilities; but when proof appeared of a falsification of its accounts of the gravest character, by the cashier, it became imperative upon them, if possible, to stay its progress; and application was straightway made, (November 29,) to Mr. Justice Merrick, (of the Supreme Judicial Court,) for an injunction to that end. The application was granted, and service made the next day on the officers of the bank. A hearing of the matter was assigned for the 4th of December, instant, at which time a temporary injunction was ordered, to remain in force till the 8th of January—when the case will be further heard. In the mean time, Charles H. Warren, Jarvis Slade and Southworth Shaw, Esquires, were appointed agents to take custody of the bank and its effects, under an order which will be found in the Appendix, marked D, together with the specifications composing the allegations made by the Commissioners in their original application to the court; these will exhibit the nature of the irregularities discovered by the Commissioners, calling for summary proceedings on their part. At the adjourned examination, the affairs of the bank (now in course of further investigation by the agents,) will be more fully developed; and the whole subject being in the hands of the court, will be passed over by us for the present, with the remark that the bank-note account did not disclose

the amount of bills issued by the bank, by more than \$100,000, and consequently misrepresented its liabilities to that extent. It ought to be stated here, however, that the creditors of the bank need entertain no doubts of its ability to meet all their demands.

The experience of the past month, in this connection, leads us once more to refer to the imperfect guardianship maintained over the bank paper, not merely after it has become cash, but while in blank state, and in progress of being signed by either officer. Every body acknowledges the necessity of *securing* the circulation—the importance of guarding it at every stage (from the original authority to procure it, and its passage through the engraver's hands, up to its final entry on the books of the bank) is equally deserving of the deepest consideration.

We have urged our views on this subject, in former reports, at the risk of being tedious to the public, as we may often have been to bank officers; and, but for recent occurrences, we should perhaps have abstained from further mention of it at this time. But no apology is now necessary for this repetition. And it should be here stated, that the Commissioners learned, on inquiry, that the late Cashier of the Grocers' Bank had ordered from the engravers at New-York an additional supply of bank-notes of the largest denominations, amounting to \$500,000—that the order was nearly filled, and it seems the blanks have been forwarded to the address of the bank since the writ of injunction was served upon it.

We have made mention, formerly, of instances of losses arising from want of care in the custody of this species of property. And we have now before us a case of abuse, which never could have occurred under a proper system of checks easy to be practised, and quite too important to be longer overlooked. In view, then, of what has passed, we feel called upon to advise (what we have repeatedly suggested in former reports) the establishment of a State Registry, under the superintendence of an officer, whose duty it shall be to procure the engraving and printing of all notes designed for circulation—the whole to be under his custody till they are delivered to any bank; and, when so delivered, to be countersigned, numbered and registered, in proper books for that purpose, under formalities corresponding to the great importance of the subject. This much is due alike to the character of the State and the security of its citizens.

The Governor of the Commonwealth, in his last annual message, holds the following language: "It is very desirable our currency should be rendered as safe as practicable; it is the duty of a depositor to ascertain the solvency of any bank he intrusts with his property; but the bill-holder, often at a distance, a laborer or a female, trusts solely to the law for protection; what the State permits as currency they confidently take, assured that the law will protect them in so doing by all just enactments." This confidence should not be suffered to prove misplaced; and if the protection of the law is needed, and thus justly and earnestly invoked for protection against the righteous issues of a bank—how much more should it interpose to prevent the imposition of a fraud upon society, as stealthy in its progress as it is baneful

in its effects, and which combines some of the worst forms of guilt with a breach of trust the most detestable.

We pass on to the consideration of

### SAVINGS BANKS.

The number in operation at the date of our former report was seventy-four. The institutions of this character chartered the present year are as follows:

Foxborough Savings Bank,
Holyoke,
\*Cape Cod Five Cents Savings Bank,
Fall River,
Lynn,

New-Bedford,
Plymouth,
Salem,
\*Shelburne Falls,
Stoneham.

Eight of these have commenced operations; and likewise the institutions at North-Brookfield and Winchendon, which were chartered the preceding year; so that the whole number now organized in the Commonwealth is eighty-four.

We do not learn that any measures have been taken for organizing "The South End Five Cents Savings Bank," at Boston, or the "Amherst Savings Bank," at Amherst, which were chartered in 1854.

The savings banks have increased the present year in nearly the usual ratio, notwithstanding the large drafts that have been made upon them in consequence of the pressure of the times, and to meet the demands of emigrants.

We republish below the statement given last year, showing the growth of these institutions since 1834—with the added result of 1855:

| Year. | No. Depositors. | Aml, of Deposits.            | Year. | No. Depositors. | Amt. of Deposits.     |
|-------|-----------------|------------------------------|-------|-----------------|-----------------------|
| 1834, | 24,256          | <b>\$</b> 3,407,773.90       | 1845, |                 | \$9,813,287.56        |
|       | 27,232          | 3,921,370.83                 | 1846, | 62,893          | 10,680,933.10         |
|       | 29,786          | 4,374,578.71                 | 1847, | 68,312          | 11,780,812.74         |

The following enactments of the last Legislature are here referred to, as being interesting to those connected with savings banks:

As an act of May 3, 1855, prohibits a savings bank from investing more than ten per cent of its deposits in the capital stock of any one corporation—or more than \$100,000 of such deposits, in case such per centage amounts to said sum—and any savings bank, having invested in any one corporation a larger amount than above authorized, is required to reduce the same to the prescribed limits within twelve months from the passage of the act.

By an act approved May 17, 1855, the trustees, or committee of

<sup>\*</sup> Not organized.

investment of a savings institution, are authorized, at discretion, to pay out any money deposited in the name of a minor, by himself or any other person, to such minor or other person making the deposit.

It should be the anxious care of every philanthropist to maintain these nurseries of frugality in their pristine purity and simplicity. The greatest good of the greatest number can only in this way be secured; and this way is departed from the moment any other modes of investment are resorted to, directly or indirectly, than the State laws mark out. Gentlemen, conductors of savings banks, associate together for the purpose of securing, in a safe way, under the direction of the State, the small earnings of a class of men who "need to be encouraged" in the practice of economy. They were authorized, in the outset, to invest such funds at their discretion. These sums became at length so considerable, that the Commonwealth assumed a more immediate guardianship of them, and prescribed certain modes of disposing of them, which being observed, the trustees were to be held harmless. It was and is to be considered that safety was more desirable than extraordinary profit—safety, which is incompatible with exposure to the ordinary risks of trade and banking.

By the 78th section, chapter 36, of the Revised Statutes, a primary list of allowable modes was pointed out, and, in the succeeding section, a secondary class was permitted to be resorted to, in case the funds could not be conveniently loaned in any of the first-mentioned forms. It never was intended that a savings bank should commence operations by entertaining, in the outset, propositions for loans of a merely personal character. These can only be suffered after the first class has been exhausted. To be sure, it may not often be an easy matter to adduce judicial proof that the trustees have made diligent search for forms of the first class before resorting to the second; but it behoves them to take care not to be exposed to the probability of such a disclosure. It never was designed, and public policy does not require, that the funds of savings banks should be made to minister to the pursuits of the business community, by mere accommodations upon com-

It was not contemplated that these receptacles of the small earnings of the proper beneficiaries would overflow with contributions from the thrifty and prosperous of all professions of men. The State prescribed how the expected deposits in these institutions might be placed in quiet investments, not anticipating that a great portion of the wealth and capital of the country should be invited to come in, and, when there, be diverted from the ordinary channels of trade. If savings banks will take the money of the rich, who are too indolent to invest for themselves, or shrewd enough to avail themselves of the financial skill and ability with which the investments of some of these institutions are managed, they have no right to commit another error by loaning any portion of it in any other way than the law points out.

But they should not commit the first error, by receiving money of persons not properly claiming to be depositors. It is inconsistent with their duty to the institution to do so—and is at variance with the settled principles and policy of the State.

But, if it is impolitic or improper to take secondary security, in any case where the primary can first be had—it is still more unjustifiable to aid weak parties in upholding their names by the support of collateral which the law does not recognize—avowedly making a loan for the sake of and by the aid of such collateral, which could not stand alone—taking three names, under the semblance of a compliance with the law, for the sake of admitting a pledge of property, which is in direct violation of it.

Cases of the foregoing character exist particularly in some of the more recent institutions, which, if persisted in, would, in the opinion of the Commissioners, subject such corporations to injunction. But, after expressing to the managers our views of their personal accountability for the security of such loans, we have been disposed to await a return to the course indicated by the laws.

The growing magnitude of savings banks suggests inquiry whether they are pursuing exclusively the purposes of their foundation—and, if not, what are the departures, and what correctives can be applied.

As we have often intimated, the accumulations of these banks are derived, in great measure, from the deposits of a class of men who are able to manage their own investments, and whose means are too ample to need the gratuitous aid of others in this particular. The public is very apt to test the success of a savings bank by the amount of money it holds in deposit. This rule of judgment is fallacious; and we are bound to consider whether all the sources from which these supplies flow into the banks, fully entitle them to the encomiums that have been lavished on them. Mere increase of deposits alone is not evidence that they are doing the proper work of savings banks. Some institutions, to a certain extent, decline taking deposits of thrifty people; they might properly be oftener refused, and still the institution be equally worthy of the confidence and commendation of the public. And, if such a principle were generally adopted, there would be less frequent calls on the Legislature to enlarge the circle of allowable forms of investment.

Savings banks in France have been not inaptly compared to bee-hives, to which the fruits of daily industry are brought by those who have earned them; and this is a just picture of these institutions here, as well as there, so long as the design is adhered to, of confining their benefits to such as need them; but the simile fails, when they take deposits from rich as well as poor—and it is as the friends of the latter, chiefly, that they have acquired their strong hold on public favor. It becomes us, then, to consider whether our savings banks are managed mainly with a view to the safe keeping of the small earnings of the community, or primarily to secure profits on the capital placed with them.

We have come to the conclusion that the latter is too often the first object. We frequently find them entering the competing lists with the other and older institutions, with an eye to large dividends; and thus they are exposed to risks which endanger the trusts they hold. We have known them, in the pursuit of larger carnings, to decline county and town securities at 5½ and even 6 per cent. It will be

hard to imagine what better operations than these can be expected. But these banks, after once allowing themselves to discount business paper, are loth to loan in any other way; and, at last, the transition is easy to the practice of discounting altogether—and, finally, as has sometimes been the case, of adopting a uniform rule to deduct the interest in advance, for six months, on all loans they make.

These departures from the proper duties of savings banks would not be so common, if persons interested in them would confine themselves to the objects held out by the originators of these charities. They do not promise their depositors large gains, but safe custody of what they bring in, and moderate accretions thereto. It may be well for the managers of savings banks to consider whether, if they are allowed to persist in performing the functions of banks of discount, they may not, hereafter, be subjected to some of the laws which now govern that class of corporations. Propositions have already been made in

other States, with a view to taxing savings banks.

Savings bank charters, that is, the privileges of taking care of other people's money, are eagerly sought for, and that without any restrictions as to the amount to be held in deposit. They are too many and too large; hence, persons connected with them are led to seek an enlargement of the range of investments; and we have even known some gentlemen, of much experience on these subjects, to propose that the whole matter should be left to the discretion of the trustees. This proposition virtually disclaims the supervision of the State altogether—an innovation to which the public never will consent, as the savings banks derive their chief claim to public confidence from the supposed power of the Legislature carefully and constantly exercised over them.

We have repeatedly urged the importance of withholding this class of charters, unless sufficient reasons can be given, in each case, to warrant the grant. We take occasion to present an extract from a report made by the joint committee of the Legislature on banks and banking, in the year 1847. The views therein expressed are entitled to respect, proceeding, as they do, from a gentleman of great experience in financial matters, and now occupying, as he has for some time past, a place at the head of one of the largest and most prosperous

savings banks in the State:

"While banks and other corporations have been freely multiplied, it has been the approved policy of Massachusetts to establish savings banks with caution, and in locations where it might be expected that there would be a sufficient number of competent and public-spirited managers, and a large amount of deposits to diminish the mischief c. These institutions are, therefore, for the most part, inevitable losses. found so separated from each other, that they make some peculiar claim to the deposits of the population which surrounds them. arrangement obliges some persons to send their deposits to an inconvenient distance. But it is surely better that the deposits should be carried so far to safety, than that they should be exposed to be lost or wasted in a nearer location. The security of the money is not the only nor the highest good that is sought by requiring that savings

banks should be strong and worthy of confidence. The existence of the system depends on the continuance of the high character which most of them have so nobly deserved. When this character shall be lost, that which might have been deposited, will probably be wasted, and the motive for economy, and the thrift, the actual wealth, which they would have created, may never be found." (Senate Doc. No. 16.)

Besides restricting the number of savings banks, or avoiding an indiscriminate multiplication of them, we must repeat our recommendation that a limit be placed to the amount of the accumulations of deposits in each case. Every charter can thus be graduated by the nature of the circumstances under which it is asked for. Applicants for them, having only the proper idea of a savings bank before them, will rest satisfied to abide the wisdom of the Legislature in this particular, and will then be induced to confine the benefits of the institution to the proper objects of its trust.

There is another practice, which has been much dwelt upon by us, which we consider as tending to magnify the receipts of savings banks, and which prevails most among the earliest and largest of them—that is, the payment of a specific rate of interest, (say four per cent,) considerably less than the earnings of the bank—reserving an extra dividend of all the profits, to be made at the return of every period of five years—and this, notwithstanding the 81st section, chapter 36, Revised Statutes, which requires that the income of profits of all deposits shall be divided among the depositors in "just proportions,"

Very ingenious theories are propounded to justify reducing the rates of dividends below the current earnings. In determining the meaning of "just proportions" of the income, it would seem as if no great difficulty existed, if the plain import of words and ordinary good faith were adopted as the rules of interpretation. The words appear to us to intend the dispensation of the justest proportion to the greatest number, and will hardly admit of being wrested from their common import by the exercise of skill on the part of managers, who desire to erect bulwarks in the shape of a reserved fund, to protect depositors against imaginary or possible loss. In this way, it is obvious, the longest depositors are the greatest gainers; while those whose necessities compel them to withdraw their funds in the interval between the quintennial dividends, earn only four per cent. more fortunate depositors, who can live without their principal, and who, consequently, are in less need of its income, are enabled, at the end of the period, to receive not only their own with interest, but to reap where they had not sown, by gathering up the proceeds of the short depositors who may have been compelled to withdraw at an earlier day. This matter is very well understood by shrewd people throughout the Commonwealth, who look upon these as among their best investments; particularly as all sums, so deposited, of less than \$500, are exempt from taxation.

A great deal, we think, depends on the right settlement of this question of the division of profits. The growth of these banks, as before intimated, is very rapid; perhaps sufficiently so, without hold-

ing out the lure of a large extra dividend to rich depositors. This course of proceeding may, indeed, render it more difficult to obtain the proper legal investments, or, at any rate, furnish pretexts for soliciting authority to take a wider range—which, we are persuaded, the proper exercise of the powers of savings banks would not call for.

Touching the institutions generally, some approximation to a more equal distribution of profits the past year is apparent. The new corporations are more frequently adopting the five per cent rate of annual dividends, and making an interval of only three instead of five

years between the extra dividends.

We have been gratified to perceive that the average rate of ordinary dividends has increased this year to  $4_{100}^{2}$  per cent, from  $4_{100}^{4}$  per cent last year, being nearly one per cent; while the average annual per cent for the past five years has fallen to  $6_{100}^{7}$  per cent, from  $7_{100}^{2}$ , as it stood last year, a diminution of nearly  $\frac{1}{4}$  per cent; a result which

likewise indicates a more equal division of profits.

It is the custom of many of our best savings banks to divide six per cent per annum; and, in other States, legislation has been resorted to for effecting a closer division of the profits. In Connecticut, the prevailing rate has been  $5\frac{1}{2}$  to 6 per cent. We noticed, not long since, that the Portland Savings Bank had made a fifth dividend at the rate of six per cent per annum, the net profits being divided every six months. By this rule, depositors suffer no great loss of interest on withdrawal of their funds; and those who prefer it, can have the income passed to their credit—and thereby they will be earning compound interest.

It is proper here to notice that we have information that it is not uncommon for an individual, in some localities, to hold by assignment several bank-books, with authority to draw the amounts due thereon. The fact suggests the probability that purchasers, in such cases, may obtain better terms if the institution practices upon the four per cent rule, with a large surplus in prospect, than where it is usual to divide the regular earnings more equally. It can hardly be a question whether encouragement in any form should be afforded to negotiations of this character.

As we have alluded particularly to the subject of personal securities, we will now point out some of the instances of excessive loans of this description, which have lately existed. This irregularity prevailed in several institutions in 1854—and it required considerable effort on our part to effect their reduction. It will be seen, by reference to the Abstract for this year, recently published by the Secretary of the Commonwealth, that the following savings banks, at the date of their returns, August 25, 1855, had exceeded the sum allowed to be loaned on personal security, that is, one half the total amount held in deposit, namely:

Lee Savings Bank,
Barnstable Institution for Savings,
Salem Five Cents Savings Bank,
New-Bedford Five Cents Savings Bank,
North-Brookfield Savings Bank.

Since the date of the State returns, above referred to, the proper corrections have been made in all these cases; and, in the last-named, it appears that the item of personal securities was made to exceed the legal amount, by having included in it a sum which more properly belonged to the class of county and town loans. It is not necessary to enlarge on this topic; experienced officers in savings banks very generally coïncide in the estimate we place on this class of paper for these institutions. They are very much more uncertain in their nature in the outset, and (as all savings bank securities should partake of a permanent character,) less reliable in the future. The younger banks incline the most to this direction with their funds. But such operations admit of more favoritism than any others; and, least of all, can a new bank be justified in resorting to them, for reasons too numerous to be recapitulated here.

Time brings sounder views; and, as these banks advance in age, we have been happy to find their general condition improves, in the selection of safe and sound investments, in preference to notes, bills, or even mortgages, that have come to them through the medium of other hands, or embarrassed by the slightest apparent doubt or de-Officers, too, in time, arrive at a fuller appreciation of their relations to the public and their depositors; which leads them to juster estimates of the offerings made to them within the statute. They often start with an impression that the community has a claim upon them, which must have weight in their treatment of applicants. Whereas, the officer has simply to be true to himself, and his duty is very plain and easy of performance. He must improve some of the modes pointed out by statute; and, within those modes, he has only to do as he would in making investments for a favorite ward, or as he would do for himself. He has every inducement to follow the law strictly; and men go out of their way to do otherwise. Trustees are benefited, and their work made lighter, by having well-settled rules to govern them; and it has been well said respecting them, that a "plain path, though it be a narrow one, is safer to walk in than a trackless waste, where no man can be sure that he is on the right course."

On the 22d of March last, application was made to the Supreme Judicial Court for an injunction on the Salem Savings Bank, which institution we have repeatedly spoken of, as disavowing any obligation to make its loans and investments in accordance with the general laws of the State, upon the ground that its charter bears earlier date than the passage of those laws. Whereupon, notice was ordered to be served on the bank, returnable at the term of the court to be held the succeeding May at Salem, to show cause why the injunction should not be granted.

The object of the process, of course, is to test the legality of the position taken by the bank, in regard to what we deem illegal investments; and, thus far, the facts alleged by the Commissioners remain undenied, and the views heretofore taken by them of the law, uncontroverted. At a future day, it will become the duty of the Commissioners to report the final disposition of this matter.

The practice of discounting by savings banks, which has been so

frequently and pointedly referred to by us heretofore, and hinted at in this Report, still prevails in certain quarters—and, in some cases, is justified by reliance on respectable professional advice or alleged legal authority. We have this subject still under advisement, and, with our present views upon it, and unless the usage should be upheld by more direct sauction, shall feel bound to take steps to submit the question to the Supreme Court at no far-distant day.

Among the authorized loans of the first class, to be made by savings banks, are the "public funds of this Commonwealth." It has occurred to us that authority might very consistently be given to the Treasurer and Receiver-General of the Commonwealth, to hire money of savings banks, when authorized by the Legislature to make a requisition to that effect, under such conditions as its wisdom might dictate. This might be done upon suitable notice to the institution, and at such rates of interest as may be fixed by law. Loans and investments of this character are obviously so much for the interest of the lender, that, at any rate not below that now paid to banks in similar transactions, they must be deemed desirable; though, it would be hoped, the rate might not be less than six per cent. The savings banks in Great Britain have their investments made with the Commissioners of the Sinking Fund for the United Kingdom; and thus the public credit is aided, on the one hand, and the good will of the people, in a degree, secured on the other.

In speaking of the "general conduct and condition" of the savings banks, (as we are required to do,) we are bound to make a distinction in those respects among them. Some of them are most admirably conducted, and all of them afford evidence of a disposition to uphold their ancient and well-earned good reputation. The losses sustained by them have been so rare as to furnish the best comment upon their faith ful management; and the instances, almost solitary, of the dissolution of one of these charters, convince us that the State owes them a debt of gratitude that cannot better be repaid than by persisting in a strict maintenance of that vigilant care over their investments, which has thus far shielded them from danger and disaster. Losses occasionally occur, (and it would be an interesting subject of inquiry from what kinds of investment or loans these most frequently arise,) but they have very seldom been considerable enough to interrupt the regular payment of ordinary dividends.

Sufficient method is not always observed in keeping the accounts and filing the papers in savings banks—particularly, at their outset. Careless book-keeping and negligent conveyancing, if persisted in, would rightfully be viewed as tending to hazard the public welfare. We have urged that all loans should be separately arranged under their respective classes; and that, with mortgages especially, all the papers relating to one transaction should be filed together—embracing in one parcel the application with a description of property, appraisement, report by committee of investment, with an abstract or certificate of title and policy of insurance. Printed forms are advantageously used in some of our best banks, embracing blanks for many of these objects on the same sheet. And, in addition to this, a sound legal

adviser should always be at hand, and relied upon, by a bank that deals much in negotiations of this sort—a precaution to which they owe much of their success in that branch of their operations, which would otherwise expose them to greater risks than any other.

Savings banks have, in some cases, submitted to us the question of the propriety of their establishing agencies in neighboring towns, for the purpose of receiving deposits on their account. Such propositions have been discountenanced by us, on the ground that, for various reasons, these corporations are designed to be conducted under the direct supervision of the precise parties who undertake their management. And we have furthermore advised the discontinuance of incipient agencies of a like kind, but confined to the town in which the corporation may be established. This advice has been adopted. Such transactions are accompanied by risk to the bank, which, though remote at first, would become considerable and extensive, if the principle involved in this question should be sanctioned. In this, as in all other matters of doubtful propriety in the conduct of these banks, the reasons are many and obvious against innovation—without one adequate motive apparent in its favor.

SAMUEL PHILLIPS, HENRY B. GROVES, A. G. UNDERWOOD.

Boston, December 31st, 1855.

GOLD OF AUSTRALIA.—A paper was read at the late meeting of the British Scientific Association on the auriferous quartz districts of Australia. Mr. Campbell was of opinion that the gold fields are inexhaustible, and the finding of gold only in its infancy. Boundless fields lie still untouched, which will employ the labor of ages yet to come; and when efficient machinery shall have been brought to operate upon the rocks, there may be then gold enough to liquidate the national debt. Sir R. I. Murchison said he had been in communication with the Governor of Australia, and it was undoubted that though the population had of late largely increased, the produce of gold had decreased. It was a virgin country; the gold lay in great troughs, and the question was, How long it would take to exhaust them? It might be a quarter of a century, more or less—he would not like to name it; but it would be sooner or later exhausted. The riches were on the surface. When the Spaniards first visited South-America, and found the palace of Montezuma, and other palaces covered with gold, which had been collected by the poor people with their sticks out of the gravel of the earth, they said, "What will come when we go down to the bowels of the earth?"—and it must be remembered that the Spaniards were then the best miners in the world. What was the result? They mined for gold, they were ruined; and a proverb gradually came into use, which said: "He who wants to make a fortune, will mine for copper; he who wants a moderate fortune, will mine for silver; and he who wants to ruin himself, let him mine for (A laugh.) There might be exceptions to this rule, but it generally held true. In nincteen cases out of twenty, deep mining will cost 25s. for every £1 of gold. This was undoubtedly the case in South-America. No doubt, however, Australia would produce gold for many years, and enable this country to found there a magnificent empire.

## THE SUPPRESSION OF COUNTERFEITING.

THIRD ANNUAL REPORT OF THE Association of Banks FOR THE Suppression of Counterfeiting.

Agreeably to the eleventh article of the Association, the Managers present herewith a report of their doings for the past year, accompanied with such explanations and suggestions as will enable the Association to judge somewhat of their labors and their results.

This report is printed as usual, and sent forth to the banks in New-England, prior to the annual meeting, that the members of the Association may have an opportunity to examine it, understand the extent of our labors the past year, and thus be prepared to make such suggestions as might not otherwise present themselves, if the report was not made until the day of the annual meeting. And of banks not members, we ask an examination of this report, and hope they will join us, as they may at any time, under the second article of the Association.

At the first meeting of the Board of Managers, elected at the last annual meeting of the Association, an assessment of five dollars on each \$100,000 of capital stock, was laid upon the banks, pursuant to the second article of the Association.

Subsequently, circulars were sent to all the banks in New-England; and, in Massachusetts, one hundred and thirty-six, out of the one hundred and seventy banks in operation, responded by paying their annual assessment. Of the banks in the other New-England States, one hundred and twenty-eight became members, out of about three hundred.

One bank in the State of New-York, one in Pennsylvania, and the Bank of Quebec in Canada, are members; making in all two hundred and sixty-seven banks now members of the Association. Last year, the number belonging to the Association was two hundred and twenty-one, making an increase the present year of forty-six banks.

The Board of Managers become constantly more impressed with the necessity of the *united* action of *every bank* in New-England and the other Northern States, not only to furnish means for, but to otherwise coöperate in, suppressing the troublesome and dangerous business of counterfeiting bank-notes.

As the banks in Rhode Island generally did not respond to our circular of yearly assessment, the Treasurer of the Association visited Providence, and, at a meeting of the banks in that city, stated what course the Association was pursuing, whereupon it was agreed that the Association should be encouraged and aided by the banks in that State; and the secretary of the meeting, L. Green, Esq., Cashier of the Weybosset Bank, was instructed to solicit subscriptions from all banks in the State.

The result of the above meeting, and of the personal effort of Mr. Green, was, that about three hundred dollars were contributed from the banks in Rhode-Island, and forwarded to the Treasurer.

The very large banking interest of the State of New-York have never yet had any united action on this subject, which daily appears almost indispensable for their own, as well as for the interest of a vast community in their midst, entitled to their protection as far as may be. We are disposed to think it is not from any disinclination to take part in such an Association, but rather for the reason that no banking gentlemen have found time to take the matter in hand.

Each bank officer is so fully engaged with his own bank, that what is "every body's business is no body's business," which continues to leave the subject one of inattention rather than one of indifference.

We, therefore, feel it a duty to suggest again the forming of an Association in the great State of New-York similar to ours, or, in order to avoid the time, labor, and expense of thoroughly organizing such an Association, to unite with us, by contributing the small assessment required of each bank, and giving us the influence and aid necessary in various ways to fight successfully the common enemy. Our operations and mode of management are so perfected, that we can operate just as successfully in one part of the country as another, provided we have the means to do so, both of money and of friendly aid and counsel of banks in the immediate vicinity of the place of operation. These we should feel more certain of, and would of course more surely receive, if those banks were with us and of us.

An informal organization of the banks in Philadelphia has been in existence about three years, which has accomplished much good in that vicinity, having sent to the penitentiary several notorious forgers, and has aided successfully to arrest several old and noted counter-

feiters, who are now in the hands of the law for justice.

We are happy to know that they have still in view a formal organization, to embrace all the banks in that commonwealth, as well as the adjoining States of New-Jersey and Delaware. We hope another year will consummate and perfect a united action of all the banks in the States above named, as a sure mode of operating at a much less

expense than in any other way.

The Board of Managers have held five meetings, at which reports have been made of the doings of the Executive Committee, and their doings approved. The Executive Committee have held forty-one meetings during the past year, at which a great variety of subjects affecting the banking interest of New-England have been presented and acted upon, besides giving special directions and authority concerning our various operations in different localities.

It was stated in the last annual report that a reward had been offered by the Executive Committee, of one hundred dollars, for the best specimen of bank-note paper. The sub-committee, having the matter under consideration, published a detailed printed report, in February last, which was sent to each bank belonging to the Association. As this report, however, may fall into the hands of parties interested, who did not see the report referred to, "upon the subject of bank-note paper," it may be of interest to repeat here the results arrived at by the committee, from testing the specimens of paper presented under our reward.

The result of this offer will be best given, perhaps, by the following reports from the gentlemen having the matter in charge.

### REPORT.

To the Association of Banks for the Suppression of Counterfeiting:

The Committee appointed to report upon the specimens of banknote paper, which have been offered for premium, respectfully submit

the following statement, namely:

The only specimens submitted for examination were from the manufactories of Messrs. Crane & Co., of Dalton, Mass., and J. M. Wilcox & Co., Ivy Mills, Penn. These parties have been extensively engaged in the manufacture of bank-note paper, and have acquired the reputation of furnishing a superior article.

The specimens offered for premium have been carefully examined, and the strength of each sample has been fully and impartially tested by an experiment showing the number of pounds each half-sheet would sustain, and the exact weight necessary to break it apart.

In these experiments, the Committee were assisted by a gentleman emineutly qualified for the duty, and his report (which accompanies this) will show in detail the full and exact results of the trial. These experiments were very satisfactory, showing that the paper of both manufacturers was very strong. The specimens of each manufacture, considered best by the Committee, were of the same weight, namely, fourteen pounds to the ream; and the strength of these samples was nearly equal, though Wilcox & Co.'s proved the strongest.

The general appearance of both these papers is good. Crane & Co.'s appears rather whiter and more even and delicate, probably owing to the pulp having been ground finer; while in Wilcox & Co.'s the fibre appears longer, which, while it naturally adds much to the strength of the paper, would also detract from its general appearance, rendering it apparently coarser and more uneven. Yet Wilcox & Co.'s paper was not coarse, or uneven, but could be written upon with perfect freedom and ease, as much so as Crane & Co.'s.

The great fault in the paper heretofore used for bank-notes, has been a want of strength and durability. The Committee are of opinion that Wilcox & Co. have produced a paper which, while it has proved stronger than Crane & Co.'s, also promises to be more durable and lasting; and in other important particulars they consider it fully equal.

They are, therefore, decidedly of the opinion that Wilcox & Co. have offered the best specimen of paper; and they are therefore fully entitled to the reward which has been offered.

Boston, February 7, 1855.

L. GULLIVER, A. D. HODGES, Committee.

#### REPORT ON BANK-NOTE PAPER.

To the Executive Committee of the Association of Banks for the Suppression of Counterfeiting:

GENTLEMEN: Having tested at your request, and in your presence, the strength of sundry specimens of bank-note paper, I proceed to give you the results.

The papers were tested as to their strength, by finding how great a weight, in pounds, was necessary to break the same number of square inches of the several sheets.

The machine by which this result was arrived at has been seen, pronounced reliable, and adopted by your Committee. It is believed that the mode of testing adopted by the Committee arrives, more readily, at more nearly accurate results, than any previous modes

known to have been practised.

The specimens of paper, each consisting of five hundred sheets from each manufacturer, were divided into three nearly equal parts, and two sheets taken from the interior of each of the parts; one of each of these sheets was used for the testing lengthwise of the sheet, when folded as used for printing bank-notes, both when "sized," as received from the maker, and after the sizing had been partially removed; this I call the "perpendicular strain." The course pursued was to halve each sheet; each half being accurately weighed, one was tested with "sizing," and the other without sizing, or after the sizing had been partially removed. This was done, so as to have, as near as possible, the same paper subjected to the same test, both with and without sizing, a single sheet not varying much in strength or quality in either half. The other sheets selected were treated in precisely the same manner, for testing crosswise of the paper, when folded as for printing bank-notes; this I call the "transverse strain." The "sizing" was removed by first treating the paper with an extremely dilute organic acid, washing in distilled water, and drying; this process was repeated, substituting a weak solution of caustic potassa for the acid, (about seven grains potassa to the fluid ounce of distilled water,) washing in distilled water, drying, and pressing. The papers examined were, all of them, fine specimens of Cellulose, and their fibre would not be acted upon by either the acid or alkali as used. The specimens were from the manufactories of Messrs. Crane & Co., Dalton, Mass., specified in this report as A No. 1, 2, and 3; and from Messrs. J. M. Wilcox & Co., Ivy Mills, Pa., specified in this report as B No. 1, 2, and 3, and C No. 1, 2, and 3. The weights used for determining the weights of the sheets, in all these experiments, were the French decimal weights, grammes, decigrammes, centigrammes, milligrammes, etc.

At a meeting of the Executive Committee of the Association of

Banks for the Suppression of Counterfeiting, it was

Voted, unanimously, that the reward of one hundred dollars be paid to Messrs. Wilcox & Co., of Philadelphia, in pursuance of the advertisement of the Committee.

It will be seen that the heavier paper furnished no increased strength as to probable wear; as, after the removal of the sizing, it was the weakest of all the specimens examined, in the direction in which strength is most needed. This examination of bank-note paper is believed to be the most thorough and accurate of any ever made in this country. And the result is very gratifying, as showing that our bank-note paper is equal, if not superior, as to strength, to that of any other. Indeed, if we may rely upon such reports as we have of the tested strength of the paper used for the notes of the Bank of England,

the samples tested here are very much superior, in this respect, to Upon looking the "experiments" over carefully, the curious observer will be struck by the great difference of strength exhibited between the perpendicular and transverse strains of the sized paper; especially as all the paper tested was "hand-laid" paper, and the difference, though varying in degree, is always in one direction—the transverse being invariably the stronger. He will also note that this difference changes, with one exception, when the unsized paper is tested, in favor of the perpendicular strain. This exception is in Crane's paper, and is possibly more apparent than real, as that paper being made double, the two inner surfaces probably protected each other, and prevented the removing of the sizing to the extent to which it was removed from the single paper made by Wilcox. The explanation of the matter is supposed to be this: when the pulp is taken up in the mould for the sheet by the maker, it is shaken in two or more directions while the water is running through and from it, and the fibre is laid in the direction, probably, in which it is shaken while it is in a particular state of semi-fluidity, and habit makes that direction uniform at that time. The fibres thus placed side by side are fastened together by myriads of minute points or pillars of gluten or sizing, and it is more difficult to pull them apart than it is to break them off. So soon as the sizing is gone the strength in this direction is weakened, and the slight interlacing of the unsized fibre gives the paper increased relative strength in the opposite direction. We have gone into this subject somewhat at length, as being one of great interest to all of us; and we trust that its importance will induce every member of the Association to do what can be done by each, to the obtaining of as perfect an article as can be made, for the common good of all. And it would seem to be worth while for the manufacturer, also, to do what he can, by improved machinery or otherwise, (by a tremulous, jarring motion, possibly,) to produce a more thorough interlacing in all directions of the fibre while settling upon the mould. Something has been already done in the right direction, we think, in consequence of the action of the Association, and we hope it is but the precursor of more and better things to come.

In connection with the subject of counterfeiting by crystallotype and photographic processes, referred to in our report of last year, it may be well to state, that the views there presented have been confirmed by further experiments, as will appear from the following report of the sub-committee, who had that matter then under consideration.

## REPORT.

The Committee appointed by the Executive Committee, March 15, 1854, to examine into the subject of counterfeiting by crystallotype process, have attended to the duty assigned to them, and respectfully report:

That, soon after their appointment, they caused experiments to be made by Mr. Whipple, the celebrated Daguerreotypist of this city, the results of which warranted them, in their judgment, in stating,

verbally, to the Executive Committee: "We have no doubt that, by the crystallotype process, bank-notes can be so well copied as to be passed into the bank issuing the original note as certainly as the original itself." "But that printing the note in fine red letters, all over its surface, as a ground-work, and then printing on that the note proper, in black ink, in the usual way, would be an effectual bar against this mode of counterfeiting bank-notes."

The Executive Committee having called the attention of the banks to the subject, by publishing and circulating among them a report, made to it by a committee upon the subject of bank-notes, in May last, containing the substance of the above statement, your Committee have waited the leisure of Mr. Whipple to make further experiments, which having been made, served by their results but to confirm the opinion, so confidently expressed, as to the dangerous certainty with

which a skillful operator could prosecute this business.

It having been somewhat questioned, of late, whether the red lettering would prove to be a protection when submitted to the test, and the Committee having been favored with a view of some crystallotypes made at the South, in one of which the denomination in large blue letters (Protectors so called) was very well imitated, by tracing with blue ink the slight impression which the crystallotype gave of them in black, they have recently caused further experiments to be made with special reference to this question, the results of which prove that the red lettering, as proposed by the Committee, is a perfect and complete protection.

The experiments of the Committee were made with notes prepared with a light red, and a dark red ground; produced, in the light red, by parallel lines, and in the dark red by lines crossing each other in a variety of directions, so as to give a considerable body of color, but not so uniform or so good as would be produced by fine lettering, compactly placed on the note. The light red came up so pale a black as to leave it questionable whether such notes might not be passed, in the evening especially; but the dark red came up so black as to confuse the whole note, destroying the vignette and end-pieces to such a degree as to set aside all idea of passing such a note to any one at all observant of, or in the habit of receiving, paper money.

In conclusion, your Committee would suggest the propriety of renewedly calling the attention of the banks to this important subject, that they may consider the expediency of protecting themselves against a danger which, from some facts within the knowledge of the Com-

mittee, threatens soon to become imminent.

Boston, March 26, 1855.

James G. Carney, James M. Gordon, Committee.

It will be perceived that the Committee confine themselves to the question of the sufficiency of the *red* lettering as a protection against these modes of counterfeiting. It may be proper to add, that their experiments led to the ascertainment of the fact that other colors, also, might be safely relied upon for this purpose. Orange, yellow, and their various shades, approaching to a *straw* color, even, were

found to produce in the crystallotype a more or less deep black, in proportion somewhat to the intensity of the shade of color used; but in all of them to an unexpected and satisfactory extent. Their opinion, already expressed, that this protection, in whatever color it is used, should be applied in the form of fine lettering, as a ground-work, remains unchanged.

remains unchanged. The subject next in importance to counterfeiting bank-notes, if indeed it is not quite equally important, is that of altered notes—alterations of a genuine note from a small to a larger denomination. Many of these are done with great ease, and with a skill and nicety well calculated to deceive even a practised eye. Some of the issues of some of the later banks almost invite the rogue to this species of fraud. The denominations in figures once on each end, and in words once in the middle of the note, are easily changed so neatly as not to excite suspicion at first sight, even in fair judges of bank-notes, and they pass quite freely until they become notorious. Different modes of protection against this evil, as well as against the general one of counterfeiting the whole note, by any and all processes, are continually offering themselves for inspection to the Executive Committee, and occupy considerable time and thought in the course of a year. These are very cheerfully bestowed upon each new plan as it is presented, in the hope that the right one, or some one suggestive of it, will, in process of time, make its appearance; and, also, to induce the preparation of new plans, and the application of fresh effort, and thought, and skill, unceasingly, to the attainment of this end. It is one of the unpleasant duties of the Committee—a duty it owes alike to the public and to the individual—to withhold its sanction to, and even to discourage the continued prosecution of, any plan which does not promise to yield a material benefit. This duty it endeavors to discharge so as not to stop effort, while it would save further loss to the inventor, who, it may be, while he clearly perceives the short-comings and the deficiencies in the plans of all who have preceded him, is yet blind to the serious objections against his own, and is unwilling to think of it as any thing short of perfect.

The Executive Committee caused to be drawn the following act,

which was passed by the last Legislature of Massachusetts:

SECTION 1. Whenever any false, forged, or counterfeit bank-bills or notes, or any plates, dies, or other tools, instruments or implements, used by counterfeiters, or designed for the forging or making of any false or counterfeit notes, coin, or bills, shall come to the knowledge of any sheriff, constable, police-officer, or other officer of justice in this Commonwealth, such officer shall immediately seize and take possession of the same, and deliver the same into the custody of the court of record, having jurisdiction of the offence of counterfeiting in the county in which the same shall be; and the said court shall, as soon as the ends of justice will permit, cause the same to be destroyed by an officer of the court, which officer shall make a return to the court of his doings in the premises.

SEC. 2. Whenever the charter of any bank in this Commonwealth shall expire or become forfeited, or whenever any such bank shall

close its business for any cause whatever, the members of the board of directors of such bank which shall have last been in office, shall forthwith deliver up all their plates and dies to the court of record in the county in which such bank shall have been established, having jurisdiction of the offence of counterfeiting, and such court shall cause the said plates and dies to be disposed of in such manner as the court shall deem expedient, in order to prevent their being afterwards used for any unlawful purpose.

SEC. 3. Any member of such board of directors who shall willfully neglect or refuse to comply with the requirements of the preceding section, shall be punished by a fine not exceeding five hundred

dollars.

SEC. 4. This act shall take effect from and after its passage.

In accordance with the provisions of the first section of the foregoing act, the Executive Committee, having obtained possession of the following-named plates and bills, caused them to be destroyed by the municipal court having jurisdiction in Suffolk County, to wit: plate of the Merchants' Bank, Salem, \$10; plate of the Webster Bank, Boston, \$5; plate of the Casco Bank, Portland, \$5; plate of the City Bank, Hartford, \$2; six pieces, of parts of plates, of different denominations, partially finished; bills of the Casco Bank, Portland, (\$5,) \$1300; bills of the Bank of Montpelier, (\$10,) \$600.

Some of the above-named plates were well-executed and very dan-

gerous counterfeits.

The plan adopted in 1853, of offering rewards for the conviction and sentence of engravers of plates for counterfeit bank-notes, or dies for altering the same, has been continued as an inducement for the various officers of the police, in all parts of the country, to arrest and convict this class of persons, and its results are highly satisfactory.

From January 1st, to December 31st, 1855, ten persons have been

convicted and sentenced.

It will be seen that the number sentenced this year is much smaller than last year, for the reason, that so large a number, and some of them the most notorious and enticing, were last year taken out of the midst of the community, and securely locked up for a term of years.

We think we may fairly claim, that from our energetic and persevering action, counterfeit bank-notes have rarely, for the last year,

made their appearance in the community.

The testimony of Mr. Grubb, who is at the head of the foreignmoney department of the Suffolk Bank, is, that since the sentence of the notorious gang last year, in Canada, very little counterfeit money has been presented, in comparison to the amount floating prior to the sentences above named.

As in the history of a nation or people, a time of peace, prosperity, and progress furnishes but few items for the historian's pen; so the comparative quiet and freedom from the inroads of the Counterfeiter the past year, happily leaves us with but a light record of "the doomed for their misdeeds." But, as in time of peace, prosperity, and progress of a nation, it is fitting itself and strengthening itself for the hour of strife, which, in process of time, is sure to come to it; so should the Association, by husbanding and enlarging its means, both of money

and of friends, be perfecting itself for its hour of need, which the future has as certainly in store for it. The convictions last year, in Canada, of offenders who, for nearly a quarter of a century, had practically bid defiance to the law and its officers, has broken up for the time all organized bands of counterfeiters there, and filled with a wholesome teror all those persons connected with them. To preserve the moral force of these convictions to its full extent upon these persons, it is necessary that they should believe, and occasionally feel, that the same watchful eye is ever upon them and their doings; and the same invisible but potent and unyielding hand is ever ready to put its grasp upon them, wherever they may be, if they continue their warfare upon the earnings of honest labor. It would certainly go far to break up the business of the counterfeiter in the Northern States entirely, if, whenever the utterer of a counterfeit was detected, he should invariably find the nearest bank a member of the Association, and always the swiftest witness against him. It will not, therefore, be a matter of surprise, if we again and again call upon each and every bank to join us, and help us in our endeavors to hedge in and check this nefarious business. We want their "material aid" in money and in men. We want to feel that they are with us, heart and hand; and we want the rogues to know that, and to feel it, too. The subscription is a small one, and we hope that it may ever be so. Ten dollars from two banks will do more for the cause than twelve or fifteen dollars from one bank. We should then have two friends to work with, and two centres to work from, instead of one. But the money is also needed, and the smallness of the assessment makes it necessary that the number of the associates should be large, in order to procure any thing like a reliable fund for extended operations. All that is not expended each year, if any thing is left, is safely funded for future use. And the future, we fear, will need it. There seems to be a sort of fascination about the business, to certain people, which is continually making converts to it from the large class of the lazy and the idle. So we may reasonably expect, from time to time, for the present at least, ever to find use for all the friends who may join us, and for all the money we may jointly contribute to the good work.

BOARD OF MANAGERS OF THE ASSOCIATION OF BANKS FOR THE SUPPRESSION OF COUNTERFEITING, IN A.D. 1855.—President: ANDREW T. HALL, President Tremont Bank; Treasurer: Almon D. Hodges, President Washington Bank; Secretary: CHARLES B. HALL, Cashier National Bank of Boston.

DANIEL DENNY, President Hamilton Moses Wood, President Rollstone Bank, Bank.

L. Gulliver, Cashier Union Bank. WM. HYDE, Cashier Hampshire Manufacturers' Bank, Ware.

J. M. THOMPSON, President John Hancock Bank, Springfield.

HENRY W. CUSHMAN, President Frank-lin County Bank, Greenfield.

Bank, Worcester.

Fitchburg.

JAMES G. CARNEY, Lowell Bank, Lowell. L. BALDWIN, President Brighton Market

J. B. CONGDON, Cashier Merchants' Bank. New-Bedford.

J. A. Appleton, President Haverhill Bank, Haverhill.

GEORGE W. RICHARDSON, President City J. CHADWICK, Cashier Exchange Bank, Salem.

EXECUTIVE COMMITTEE IN A.D. 1855.—Chairman: JAMES G. CARNEY; Secretary: Charles B. Hall; Almon D. Hodges, Lemuel Gulliver, James M. THOMPSON.

## ARTICLES OF ASSOCIATION.

The Associated Banks of Massachusetts, represented by their delegates in convention at Boston, February 9th, 1853, adopted the following Plan of Organization:

I. The object of the Association is the prevention of counterfeiting, and the detection of counterfeiters of bank-bills, coins, checks, or drafts.

II. Each and every bank may be represented by one officer, who may be a president, cashier, or director of the bank, to be appointed by the Board of Directors. An annual assessment may be made upon each bank represented in the Association, in proportion to the amount of its capital stock, to be determined by the Board of Managers, but in no case to exceed the sum of five dollars per annum, on each one hundred thousand dollars of its capital.

III. There shall be an Annual Meeting of the Association in Boston, in the month of February, of which fourteen days' notice shall be given, by a printed or written notice, addressed to the cashier of the

bank.

IV. At this meeting, all the officers for the year shall be elected by ballot, to consist of a Board of fifteen Managers, five of whom shall be from the county of Suffolk, and ten from such other places in the State as the meeting may decide.

V. The Managers shall choose a chairman, secretary, and treasurer. The chairman shall be, ex officio, President of the Association. In case of his absence, any other member may be chosen to preside.

VI. The Secretary shall record the doings of the Association and of

the Board of Managers.

VII. The Treasurer shall receive and disburse the funds of the Association, under the direction of the Board of Managers; and, if required, shall give bonds for the faithful discharge of his duties.

VIII. There shall be regular quarterly meetings of the Managers, five of whom shall constitute a quorum. Special meetings may be called by the chairman, secretary, or any other two members of the Board.

IX. The Managers shall have power to appoint such agent or agents as they may deem proper to promote the objects of the Association, and determine their compensation.

X. The agent or agents thus appointed, shall render a written report of their doings, at each quarterly meeting of the Managers, and at any

intermediate time, when required.

XI. At each Annual Meeting of the Association, the Managers shall render a detailed report of their proceedings, and the acts and doings of their agents, together with a statement of all funds received by the Treasurer and disbursed by him under their directions—all accompanied with proper vouchers, to be presented to the Governor for his action thereon, according to law.

XII. Any bank becoming a party to this plan of organization, by a duly-authorized officer, and paying its proportion of the assessments,

shall be entitled to all the privileges of the Association.

## Rules of the Board of Managers.

PREAMBLE.—As much of the efficiency of the Association will depend upon secret information, to be obtained only with the understanding that its source is to remain secret, it is understood by each member of the Board that all communications made to it are to be strictly confidential.

ARTICLE I. Meetings.—The Annual Meeting of the Association shall

be held on the second Wednesday of February.

The quarterly meetings of the Board shall be held in Boston, on the third Wednesday of February, May, August, and November. Special meetings shall be held at any time, at the request of the Chairman, or of any two members of the Board. Five minutes after the time named, a quorum being present, the Board shall proceed to business; and the first business in order shall be the reading of the records of the last meeting of the Board, and of the doings of the Executive Committee since that meeting.

ART. II. Officers.—The Board of Managers, considering itself as the trustee of the Association, and ex officio the depository of its power, to this extent, will fill pro tempore any vacancy which may occur in its own body, or in the office of secretary or treasurer, by the choice of, or appointment thereto, of some delegate from some one of the banks belonging to the Association, who may be eligible to fill

such vacancy, according to the articles of association.

The chairman shall preside at all meetings of the Board when present; in his absence, a chairman pro tem. shall be chosen. The treasurer shall receive all the funds belonging to the Association, whether now in existence or hereafter accruing, together with all vouchers for payment of money, and all other papers and books relating to this office, and hold the same, subject to the orders of the Board, except as provided for in Article III.; and on his retirement from office, shall pass the same to his successor, or to the executive committee. He shall give a bond in the sum of five thousand dollars, to such persons as may be named by the Board as trustees for the Association, for the faithful discharge of the duties of his office; keep a book belonging to the Association, in which shall be entered in detail, all receipts and payments of money; keep the funds of the Association invested, as provided in Article III.; at each quarterly meeting of the Board, and oftener if required, lay before it a statement of the assets and liabilities of the Association, and generally to discharge all other duties usually belonging to said officer; and shall be paid for his services one hundred dollars per annum. The secretary shall keep a record, in books belonging to the Association, of the banks belonging to it, with the capital of each; of all meetings and doings of the Association, of the Board, and of the Executive Committee; with the names of the Managers present at the meetings of the Board, and of the Executive Committee: notify the annual meeting of the Association (to be held on the second Wednesday of February, at such time and place as the Board may direct) as required in the articles of

association; notify each member of the time and place of meeting of all meetings of the Board, and of all adjournments thereof; and at each meeting of the Board have his records of its doings and of the doings of the Executive Committee present for inspection and use, as provided in Article I.; take charge of and preserve all books and papers belonging to the Association, not connected with the treasurer's department; correspond with banks and individuals, by direction of the Board, or of the Executive Committee; and generally do and perform all other duties usually devolving upon such office; and at the expiration of his office, deliver the books and papers in his possession, belonging to the Association, to his successor; and he shall be paid for his services five hundred dollars per annum; and no salaried officer or agent shall be employed by the Board or the Executive Com-

mittee, except the treasurer and secretary aforesaid.

ART. III. Executive Committee.—The Executive Committee shall consist of five members, three from Boston and two out of Boston, to be chosen by ballot annually, by the Board, whose duty it shall be to institute and prosecute, or authorize to be instituted and prosecuted, all proceedings in furtherance of the objects of the Association, during the recess of the Board; authorize the treasurer to pay bills, and either member of the committee to enter into engagements on behalf of the Board, to an amount not exceeding in all one thousand dollars, during such recess; such engagements being entered into, and bills created, solely as special undertakings, in each instance, and with no avowed view of permanency, except with the previous assent of the Board, had and obtained in each case; and all bills and engagements exceeding that sum are to be acted upon by the Board, before such bills are paid or engagements entered upon; direct the investment of the funds in the hands of the treasurer, and generally exercise, when the Board is not in session, the power conferred by the Association upon the Managers, subject to the restraints and limitations contained in the articles of association, and in these rules, and to such further restraints and limitations as the Board may, by rule or vote, from time to time impose. In case of the absence of three of the members of this committee, those present may call in either of the Managers to act as members pro tem., and the committee shall act only by unanimous assent of the members present in all cases, and three members shall constitute a quorum.

ART. IV. Managers' Expenses.—The expenses of the Managers, incurred in the discharge of their duties as Managers, shall be paid as follows: Two dollars for each day's attendance at meetings of the Board, and of special committees thereof, with an allowance to those managers residing out of Boston for travelling expenses, of one dollar for each ten miles of travel in one direction.

ART. V. Alteration of Rules. — These rules may be altered at any meeting of the Board at which a majority of the Managers are present, notice having been given of the purpose.

## TEXAS PUBLIC DEBT.

Notice to the Creditors of the late Republic of Texas.

TREASURY DEPARTMENT, February 27, 1856. WHEREAS, on the 28th of February, 1855, Congress passed the following act upon the subject of the debt due to the creditors of the late Republic of Texas:

An Act to provide for the payment of such creditors of the late Republic of Texas as are comprehended in the act of Congress of September ninth, eighteen hundred and fifty.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in lieu of the sum of five millions of dollars, payable to the State of Texas in five per cent stock of the United States, by the act entitled "An act proposing to the State of Texas the establishment of her northern and western boundaries, the relinquishment by the said State of all territory claimed by her exterior to said boundaries, and of all her claims upon the United States, and to establish a territorial government for New-Mexico," passed September ninth, eighteen hundred and fifty, the issuing of which stock was restricted by the first proviso to the fifth proposition contained in the first section of said act, the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to the creditors of the late republic of Texas who hold such bonds, or other evidences of debt for which the revenues of that republic were pledged, as were reported to be within the provisions of the said act of September ninth, eighteen hundred and fifty, by the report of the late Secretary of the Treasury to the President of the United States, and approved by him on the thirteenth day of September, eighteen hundred and fifty-one, or which come within the provisions of said act, according to the opinion upon the Texas compact of the present Attorney-General of the United States, addressed to the Secretary of the Treasury, under date of September twenty-sixth, eighteen hundred and fifty-three, the sum of seven millions, seven hundred and fifty thousand dollars, to be apportioned among the said holders pro rata: Provided, That the interest on the debt embraced in this act

shall be determined by the existing laws of the State of Texas.

§ 2. And be it further enacted, That in all cases where the State of Texas may have paid any portion of the debt described in this act, the said Secretary shall refund to the proper officer of said State the amount actually so paid by the State, upon the presentation at the Treasury Department of the evidences of said debt on which the said State may have made such payment: Provided, The said sum shall not exceed the proportion which would have been allowed to the creditor or creditors if such payment on said evidences of debt had not been made by the State of Texas; and where the said sum that may be refunded to the State of Texas by the provisions of this section is less than the proportion which would have been allowed under this act to the holders of such evidences of debt had such payment not been made them, such holders shall be entitled to receive the differ-

ence between said sum and the proportion they would have received under this act if no payment had been made them; and where any original certificates or other evidences of debt have been surrendered to the authority of the State of Texas, and new certificates issued therefor by said State of Texas, such new certificates shall be received as evidences of the original amount of the claim.

§ 3. And be it further enacted, That no payment shall be made under this act to any holder of said securities or evidences of debt, unless the said holder shall first execute to the United States a receipt for the said payment, in which said holder shall for ever release all claim against the United States for or on account of the said securities or evidences of debt; also similar releases to said State of Texas; and the said certificates or other evidences of debt shall then be deposited with the Treasury Department.

§ 4. And be it further enacted, That before payment of the moneys aforesaid, the Secretary of the Treasury shall give notice, by public advertisement, for the space of ninety days, of the time at which said payment will be made, and no payment shall be made on any bond, certificate, or evidence of debt, which shall not, thirty days before the time limited by said notice, be presented at the Treasury Department.

§ 5. And be it further enacted, That the sum of seven millions seven hundred and fifty thousand dollars be, and the same is hereby, appropriated out of any moneys in the Treasury not otherwise appropriated, for the purpose of carrying into effect the provisions of this act.

§ 6. And be it further enacted, That this act shall not take effect until it shall be assented to by an act of the Legislature of the State of Texas, and a copy of the act of said State, duly authenticated, deposited in the Treasury Department at Washington; nor until the Legislature of the State of Texas shall pass an act withdrawing and abandoning all claims and demands against the United States growing out of Indian depredations or otherwise.

Approved February 28, 1885.

And whereas, on the 1st of February, 1856, the State of Texas passed the following act, giving the assent of that State to the aforesaid act of Congress, and specifying the several debts of the late Republic of Texas, amongst the holders of which the \$7,750,000 appropriated by said act of Congress is to be divided, pro rata, in discharge of the principal and interest due on said debt, according to the laws of Texas:

An Act giving the assent of the State of Texas to "An act to provide for the payment of such creditors of the late Republic of Texas as are comprehended in the act of Congress of September ninth, eighteen hundred and fifty," which was passed at the second session of the Thirtythird Congress of the United States, and approved February twentyeighth, eighteen hundred and fifty-five.

Whereas, at the second session of the Thirty-third Congress of the United States, an act was passed, entitled "An act to provide for the payment of such creditors of the late republic of Texas as are comprehended in the act of Congress of September nine, eighteen hundred and fifty," which act was approved February twenty-eighth, eighteen

hundred and fifty-five, and provides that in lieu of the sum of five millions of five per cent stock of the United States still due to Texas, under the provisions of the act of Congress of the ninth of September, eighteen hundred and fifty, the United States will pay to the creditors of the late republic of Texas who hold such bonds, or other evidences of debt for which the revenues of that republic were pledged, as were reported to be within the provisions of the said act of September the ninth, eighteen hundred and fifty, by the report of the late Secretary of the Treasury to the President of the United States, and approved by him on the thirteenth day of September, eighteen hundred and fiftyone, or which come within the provisions of said act, according to the opinion upon the Texas compact of the present Attorney-General of the United States, addressed to the Secretary of the Treasury, under date of September twenty-sixth, eighteen hundred and fifty-three, the sum of seven millions seven hundred and fifty thousand dollars, to be apportioned among the said holders pro rata; the interest on the said debt to be determined by the existing laws of the State of Texas.

And whereas by the terms of the said act of the twenty-eighth of February, eighteen hundred and fifty-five, it is not to take effect until it shall be assented to by an act of the legislature of Texas, nor until the legislature of said State shall pass an act withdrawing and abandoning all claims and demands against the United States growing out

of Indian depredations or otherwise: Now, therefore—

§ 1. Be it enacted by the Legislature of the State of Texas, That the said State hereby consents and agrees, that in lieu of the five millions of five per cent stock still due to said State, under the act of Congress of the ninth of September, eighteen hundred and fifty, the United States shall pay to the said described creditors, whose debta ostensibly amount, with interest thereon according to the laws of Texas, to the sum of ten millions seventy-eight thousand seven hundred and three dollars and twenty-one cents, of which five millions five hundred and two thousand nine hundred and sixteen dollars and thirty-four cents principal, and three millions two hundred and eightyfour thousand two hundred and forty-one dollars and ninety-four cents interest on said principal, are evidenced by the certificates of the auditor and comptroller of the State of Texas, issued under the provisions of "An act to provide for ascertaining the debt of the late republic of Texas," approved March twentieth, eighteen hundred and forty-eight, and other acts of said State passed subsequent thereto; ninety-eight thousand five hundred and forty-five dollars and sixty-six cents of principal, and one hundred and three thousand two hundred and ninetynine dollars and twenty-seven cents of interest on said principal, are evidenced by ten per cent bonds of the republic of Texas, issued under an act of Congress of said republic of the seventh June, eighteen hundred and thirty-seven; two hundred and eighty thousand dollars of principal, and three hundred and twenty-five thousand and five hundred dollars of interest on said principal, are evidenced by a ten per cent bond issued by the republic of Texas to Frederick Dawson, for naval vessels, dated the thirteenth of September, eighteen hundred and thirty-eight; forty-one thousand and one hundred dollars of principal, and forty-one thousand two hundred and seventy-one dollars and twenty-four cents of interest on said principal, are evidenced by ten per cent bonds of the republic of Texas, issued under the provisions of an act of Congress of said republic, entitled "An act to provide for the redemption of the promissory notes of the government now in circulation, and for funding other liabilities of the government," approved fifth of February, eighteen hundred and forty; three hundred dollars of principal, and two hundred and thirty-six dollars of interest on said principal, are evidenced by eight per cent bonds of said republic, issued under the provisions of the act of Congress of the said republic, last before named; twenty-four thousand and one hundred dollars of principal, and eighteen thousand three hundred and sixteen dollars of interest on said principal, are evidenced by eight per cent treasury bonds of said republic, under the provisions of an act of the Congress of said republic, entitled "An act for creating funds for the support of the government for the year eighteen hundred and forty," approved February fifth, eighteen hundred and forty; two thousand nine hundred and thirty dollars of principal, and eight hundred and ninety-one dollars and twenty-one cents of interest on said principal, are evidenced by the first issue of promissory notes of said republic, under the provisions of an act of Congress of the said republic of the seventh of June, eighteen hundred and thirty-seven; sixteen thousand five hundred and thirty-seven dollars of principal, and three thousand six hundred and fifty-one dollars and ninety-one cents of interest on said principal, are evidenced by the second issue of the promissory notes of the said republic, under the provisions of the act of the Congress of said republic, last before named, and three hundred and thirty-four thousand eight hundred and sixty-six dollars and sixty-four cents of principal are evidenced by the promissory notes of said republic, without interest, issued under an act of the Congress of said republic of the nineteenth of June, eighteen hundred and thirty-nine, the sum of seven millions seven hundred and fifty thousand dollars, to be apportioned among them pro rata; and the said State hereby assents to said act of Congress of the twenty-eighth of February, eighteen hundred and fifty-five, with the foregoing declaration of the debts that she understands to be embraced in its provisions, and among which the said sum of seven millions seven hundred and fifty thousand dollars are to be apportioned pro rata.

§ 2. Be it further enacted, That the State of Texas hereby withdraws and abandons all claims and demands against the United States growing out of Indian depredations or otherwise, which originated on or before the twenty-eighth day of February, eighteen hundred and fifty-five: *Provided*, This abandonment shall not apply to claims of individuals for losses of property by the enemy.

§ 3. Be it further enacted, That this act shall take effect and be in force from and after the date of its final passage or approval.

H. P. Bre,

Speaker of the House of Representatives.

H. R. RUNNELS,

President of the Senate.

Approved 1st February, 1856.

E. M. PEASE.

## DEPARTMENT OF STATE.

Austin, Texas, February 2, 1856.

I, Edward Clark, Secretary of State of the State of Texas, do hereby certify that the foregoing eight pages hereto annexed is a true and correct copy of the original act entitled "An act giving the assent of the State of Texas to 'An act to provide for the payment of such creditors of the late republic of Texas as are comprehended in the act of Congress of September nine, eighteen hundred and fifty,' which was passed at the second session of the Thirty-third Congress of the United States, and approved February twenty-eighth, eighteen hundred and fifty-five."

[SEAL] Witness my hand and the seal of the department the day and year aforesaid. Edward Clark, Secretary of State.

EXECUTIVE DEPARTMENT.

I, E. M. Pease, Governor of the State of Texas, do hereby certify that Edward Clark, who signed the certificate on the preceding page as Secretary of State, is and was at the date of said certificate the Secretary of State for the State of Texas; that he is, by law, the keeper of the original statute laws of said State, and that his attestation is in due form.

In testimony whereof, I hereunto sign my name and cause the great seal of the State to be affixed, at the city of Austin, this the [SEAL] sixth day of February, A.D. 1856, and in the year of the independence of the United States the eightieth and of Texas the twentieth year.

E. M. Pease.

And whereas the creditors referred to in said act of Congress are deemed identical with the holders of the debt described in the said act of the State of Texas; and whereas it is alleged that there exist forged certificates of said debt, the holders of which may assert to be genuine and claim payment of; and whereas the 3d section of said act of Congress requires the holders of the certificates and other evidences of said debt shall execute releases to the United States, and also to the State of Texas, before payment; and the 4th section of said act requires that public notice should be given for the space of 90 days of the time when said payment will be made; and whereas the Treasury Department has adopted the form A of a release to the United States, and the form B of a release to the State of Texas, notice is hereby given to said creditors that payment, pro rata, will be made at the treasury of the United States, by means of treasury drafts on some of the assistant treasurers or public depositaries of the United States, on and after the 1st of June, 1856, to such of the holders of the genuine certificates or other evidences of said debt, in accordance with the provisions of said acts, who shall have assigned their said certificates or other evidences of said debt to the United States, and executed the release in the form A to the United States, and the release in the form B to the State of Texas, and filed the same with the Secretary of the Treasury 30 days before the 1st of June next, the 30 days being required to investigate the genuineness of the certificates; for which purpose, the department is advised, Texas will send an agent who possesses knowledge of the debt as it was created, and the handwriting of the officials whose signatures are attached to them. It is desirable that all the certificates and evidences of debt should be filed 30 days before the 1st of June; and the holders will take notice that all certificates and evidences not filed before that time will be retained for examination and investigation until the department shall be fully satisfied of the genuineness of the certificates and evidences produced. The assignment and releases may be executed and acknowledged in the presence of the Assistant Secretary of the Treasury, or the chief clerk thereof, in the presence of a notary public, and be witnessed by the Assistant Secretary, or chief clerk and notary, and be certified by the notary under his notarial seal; but when the holders desire to make the assignment and execute the releases out of the city of Washington, it may be done in the presence of an assistant treasurer, or collector or surveyor of the customs, in the presence of a notary public, and be witnessed by the collector or surveyor and the notary public, and be certified by the notary under his notarial seal; and if there be no collector or surveyor of the customs at the place where the party resides, the assignment and releases may be executed before any court of record, in the presence of the judge and clerk thereof, and be witnessed by them, and certified by the clerk under his seal of office; and if the holder be out of the United States, the assignment and releases may be executed before any United States consul, and be witnessed and certified by him under his consular seal. All persons executing such assignments and releases must also declare, under oath before the notary, clerk, or consul, as the case may be, that they are the real owners of the certificates or other evidences of debt, or that the same have been assigned to them, bona fide, for collection; and the notary clerk or consul must include the fact of that declaration in their certificate of acknowledgment.

The pro rata dividend, when allowed by the accounting officers, will be remitted to the parties in accordance with their directions, or the drafts handed to their regularly-constituted agents for transmission.

James Guthrie,

Secretary of the Treasury.

## Form A.

As witness my hand and seal.

## Form B.

-, for the sum of \$--, issued by the tificate or evidence of debt number late republic of Texas, and redeemed by the United States in accordance with the provisions of an act of Congress, entitled "An act to provide for the payment of such creditors of the late republic of Texas as are comprehended in the act of Congress of September nine, eighteen hundred and fifty," approved the 28th day of February, 1855, and an act of the State of Texas, approved the 1st of February, 1856. As witness my hand and seal.

## POSTSCRIPT.

In answer to various inquiries, claimants will take notice that the affidavits of ownership required to be filed with the certificates, or other evidences of debt, must show whether the holder is the real owner, or holds the same for collection, or in pledge for moneys advanced. If for collection, or in pledge, the name of the party holding the beneficial or residuary interest in the claim must be stated in the affidavit, and an assignment and release to the United States and release to Texas must be duly executed by such party, together with an assignment and releases from the person in whose favor settlement and payment

is requested.

Claimants under the 2d section of the act of 28th February, 1855, who have surrendered their certificates to Texas upon payment of a portion of the amount, and now claim the difference between the amount so paid and the proportion payable thereon under that act, must file affidavits stating the surrender of such certificates, and describing each, the amount received thereon, whether the party who surrendered to, and received the amount from, Texas was the real owner, or held the same for collection, or in pledge. The party claiming any beneficial or residuary interest in the difference, as well as the person in whose favor settlement and payment is requested, must, respectively, file an assignment and release to the United States and a release to Texas in the same manner as in other cases. After the amount paid by Texas upon such certificates shall be refunded, claims of this description will be examined and settled in conformity with the proviso of said 2d section.

Claimants will also take notice that one or more certificates, or one or more evidences of the same character of debt, may be included in the same affidavit of ownership, assignment, or release, if each certificate or other evidence of debt is correctly described therein by its number, date, amount, and name of payee. It should also appear whether the certificates were issued by the authorities of the State of Texas upon claims against the republic, or were issued by the republic of Texas, according to the facts in each case.

TREASURY DEPARTMENT, 1 March 6, 1856.

JAMES GUTHRIE. Secretary of the Treasury.

## BANK ITEMS.

NEW BANK BUILDINGS.—The Directors of the Continental Bank have concluded to erect a suitable building for their banking business, adjoining the new building of Messrs. Duncan, Sherman & Co., Nassau street. The Directors of the Fulton Bank, also, propose to enlarge their banking-house, so as to present a front of forty-nine feet on Pearl street. The present building is entirely too contracted for the large business of the Bank.

New-York County Bank.—Francis Leland, Esq., of 33 Broad street, has been elected President of the New-York County Bank, in place of Charles A. Macy, Esq., who has been appointed Cashier of the Park Bank.

Madison County.—The organization of the Leonardsville Bank, at Leonardsville, Madison county, was made on the 27th February, with a capital of \$100,000. President, N. T. Brown, Esq.; Cashier, Dennis Hardin, Esq.

Albion.—A bold attempt was made to rob the Bank of Albion on Monday evening, March 3, by taking the lock off from the door leading into the business-room of the Bank, where the burglars found about five dollars in coppers, which they carried off. After endeavoring to blow the bolt off from the outer vault-door without any impression, they decamped. The editor of the American thinks it was the work of some one quite familiar with the Bank.

New-York Legislature.—The Banking Committee of the Senate of New-York have submitted a voluminous report in answer to a resolution requiring them to report upon the expediency of passing a law prohibiting the payment of interest on deposits made in the banks of this city by banking institutions incorporated elsewhere. According to this report the bank balances due by the New-York City banks vary from about nine to seventeen millions. In the view of the Committee, the possession of these balances is one of the causes of the rapid expansions and curtailments by the city banks, from the necessity of using those means in all loans, to enable them to pay the interest upon them. The Committee says:

"For many years past the city of New-York has been distinguished for the vast sales of stocks which are daily made at the Brokers' Board, and these sales seem to be constantly increasing. In no other place in the world do such great fluctuations in the prices of such securities occur, and nowhere else is there such a gene-

ral disposition to speculate in them.

"Those who operate largely in this way, are usually heavy borrowers of money, pledging for it such stocks as they possess, as collateral security, and giving their own notes, payable on call or short notice. The demand for money on such loans seems to be without limit, for as money becomes more abundant, the facilities for borrowing constantly stimulate speculation, and perhaps bring into existence new stock companies, thus creating still larger demands.

"Loans of this description are usually in large sums, attended with no trouble to the lender, and being payable on demand, are regarded as a most desirable mode of obtaining interest on deposits which are liable to be drawn for at sight; indeed, if it were not for this description of loans, it is quite evident that the banks,

if prudent, could not loan largely of the deposits held for foreign banks.

"The Committee believe that the facilities for lending money in this manner, connected with the fact that the banks are unrestrained as to the amount or character of their loans, are the reasons why the practice of allowing interest upon deposits has been so generally adopted; and it easy to be seen that the practice must tend to increase the deposits of foreign banks, and thus produce more violent fluctuations in the money market when the time comes for such deposits to be withdrawn."

Rochester.—Oliver L. Terry, Esq., was appointed Cashier of the Union Bank of Rochester, N. Y., on the 15th March, in place of S. H. Verplanck, Esq., resigned.

MASSACHUSETTS.—The bill in addition to an act to incorporate the Bank of Mutual Redemption came up for consideration in the Legislature.

Mr. Thaxter, of Watertown, moved to add to the first section the following:

- "And said capital stock shall not be liable to the payment of any tax to the Commonwealth other than the sum paid by the subscribing banks."
- Adopted.

  Mr. Thaxter also moved to amend by substituting for the 4th section, the following:
- § 4. Said Bank shall be subject to the same restrictions and entitled to the same privileges in all respects as the banks of this Commonwealth.

Rejected.

Mr. Phelps, of Springfield, moved to reconsider the vote whereby the first amendment of Mr. Thaxter was adopted.

On this motion a long debate occurred, which was participated in by Messrs. Phelps, Torrey of Boston, Mixter of Hardwick, Thurston of Lancaster, Thaxter of Watertown, Stoddard of Worcester, Lawrence of Cambridge, Sevier of Boston, and Fletcher of Lowell, when the motion was carried and the amendment was rejected

The bill was then passed to be engrossed. The bill now reads as follows:

An Act in addition to an Act to incorporate the Bank of Mutual Redemption. Be it enacted, etc.

- § 1. The act to which this is in addition, is hereby amended as follows: The purpose for which said Bank is incorporated, is for redeeming the bills of New-England banks. The stock of said Bank shall be subscribed and held only by the banks in the New-England States, and the several banks in this State are authorized to subscribe to said stock by a vote of their directors: provided, that no bank shall be authorized to subscribe to said capital stock to an amount exceeding five per cent of the capital of said bank actually paid in, nor exceeding the sum of twenty thousand dollars.
- § 2. Whenever five hundred thousand dollars shall have been subscribed as aforesaid, said Bank may proceed to organize: provided, it shall not commence business until the sum of one million of dollars shall have been subscribed, and one half of the amount paid in.
- § 3. Any stockholder in any bank which is the owner of stock in said Bank of Mutual Redemption, shall be eligible as a director: provided that at least three fourths of the directors shall be inhabitants of this State, and all of them inhabitants of the New-England States.
- § 4. Said Bank shall not issue bills of less denomination than five dollars, and shall be subject to the same restrictions and entitled to the same privileges, except as is provided in the act to incorporate the Bank of Mutual Redemption, and in this additional act, as the banks in this Commonwealth.
- § 5. The Bank of Mutual Redemption shall have a lien paramount to all other claims upon the stock of said Bank or securities deposited in said Bank and owned by any stockholder bank to the extent of any debt or liability of any such stockholder bank to the said Bank of Mutual Redemption.
- § 6. Such parts of the provisions of the Act to which this is in addition as are inconsistent herewith, are hereby repealed.
  - § 7. This act shall take effect on and after its passage.

Grocers' Bank.—The Supreme Judicial Court of Massachusetts has given its decision in the case of the Grocers' Bank of Boston, to the effect that the receivers should on demand transfer the property, accounts, and effects of the Bank into the hands of Messrs. Samuel G. Reed, of Boston, (President of the institution,) and Edward Mott Robinson, of New-Bedford, who are immediately to give public notice that they will forthwith pay off all authorized claims against the Bank, and who may sell or dispose of property of the institution, with the consent of the Directors, for the interest of the stockholders—and to make report of their doings to the Court on the 28th of April next, or earlier if required. William J. Hubbard, Esq., was appointed to determine the amount for the services of the late Receivers, which is to be paid by the Bank. The injunction upon the institution is still to remain in full force, with the exception of the changes made by this decree.

In addition to the cancelling of liabilities, the new agents are empowered to issue transfer certificates of stock, and to collect dues to the Bank.

Counterfeits.—Our announcement that the plan of Mr. Seropyan to prevent counterfeiting had been approved by the Massachusetts Association for the prevention of counterfeiting was premature. The subject is still before the Association, and will receive their close attention, and will be reported upon in due course.

Cape Ann.—The Bank of Cape Ann went into operation on Saturday, March 15, at Gloucester. Gorham P. Low, President, and Samuel J. Giles, Cashier.

New-Jersey.—There are now thirty-five banks doing business; twenty-nine, under special charters, and six under the general law. Aggregate capital, \$5,682,-262; circulation, \$4,285,075; loans and discounts, \$10,999,919; deposits, \$3,994,-541; specie on hand, \$782,659. The Bordentown Banking Company, Central Bank at Hightstown, Newark City Bank, Bank of New-Jersey at New-Brunswick, and the Princeton Bank, formerly operating under the general law, having received special charters at the last session of the Legislature, have gone into business under these charters, and are now winding up their business under their original organization. Notes of free banks amounting to \$550,249 have been returned and cancelled during the year, leaving a balance outstanding of \$148,622, secured by public stocks and mortgages in the treasury, amounting to \$149,400.

The following free banks have relinquished the business of banking, and deposited with the Treasurer funds for the redemption of the notes still outstanding: Farmers' Bank, at Freehold; Atlantic Bank, at Cape May Court House; City Bank, at Cape Island; Bank of America, at Cape May; Public Stock Bank, at Belvidere; Tradesmen's Bank, at Flemington; and Bank of Cape May, at Cape Island. The balance of notes of these banks still outstanding amounts to \$5674. The American Exchange Bank, Merchants' Bank at Brighton, and Wheat Growers' Bank at Newton, are now being wound up under decrees of the Court of Chancery. The time limited by law for the redemption of the outstanding notes of the following banks having expired, the redemption funds have been paid over by the Treasurer to the banks: Ocean Bank, at Bergen Iron Works; Delaware & Hudson Bank, at Tom's River; Merchants' Bank, at May's Landing; and Atlantic Bank, at May's Landing.

The only bank bill—that to incorporate the Phillipsburg Bank—which passed the Legislature at its recent session, has been signed by Governor Price. Last year his Excellency vetoed all special acts of incorporation. The Bank is to have a capital of \$200,000, and its charter contains all the restrictions provided by the recently-enacted bank-charters, such as the liability of all the assets of the Bank for the payment of the circulation, which shall not exceed twice the capital, and the individual liability of directors and stockholders (the former in the whole of their estate, and the latter in twice the amount of the stocks held by each) for the

The Legislature of New-Jersey adjourned on the 14th of March without creating any new banks, and without altering the usury laws.

SAVINGS BANKS.—The utility and obvious advantage of having substantial buildings for banking purposes are such that hereafter such structures will be erected upon the most solid principles. The building erected for the Seamen's Savings Bank, New-York City (of which we give a correct view,) has a front of 49 feet 1 inch on Wall street and 53 feet 3 inches on Pearl street, and was built in the most substantial manner, of Connecticut River red sandstone. It was one of the first banking-houses built with iron beams on every floor, secured from fire by a plating of corrugated iron extending up to the brick walls in every part. The roof is also fire-proof, of corrugated iron resting upon iron beams.

The banking-room and offices connected therewith occupy all the principal floor, and the vault in the banking-room is built of granite blocks.

The basement and upper stories are leased, so as to give an income of about 5 per cent on the investment.

The entrances to the banking-room, as well as those to the offices that are leased, are on Wall street, and the upper stories are approached by a commodious and well-lighted staircase built altogether of iron. Frederic Diaper, architect.

GEORGIA.—Among the legislative acts of the last session were the following: 39. An act to amend an act to incorporate a bank in the city of Savannah, to be called the Mechanics & Traders' Bank, approved February 17, 1854, and to apply the provisions of said act to the Bank of Commerce.

84. An act to change the name of the Augusta & Waynesboro' Railroad to the Augusta & Savannah Railroad, to amend the charter, and for other purposes.

259. More effectually to compel the payment of the legal tax heretofore imposed on agencies of foreign banks.

379. To charter the Exchange Bank of the State of Georgia and Griffin.

The Legislature of Georgia, at its late session, passed an act incorporating the "Bank of Fulton," to be located in Atlanta. The act incorporates the bank with a capital of \$300,000, to continue until January 1, 1875. It provides that if the charter shall be sold, it is to be instantly forfeited. Two thirds of the stock shall be owned by citizens of Georgia. The Legislature also incorporated the "Bank of Greensboro," at Greensboro. IL "The Bank of Morgan," at Morgan; and III. The "Bank of Brunswick."

New-York, March, 1856.

ARCHITECTURE FOR COUNTRY BANES.—At the request of the publisher of the Bankers' Magazine, we have examined various plans for country banking-houses that have been submitted to us, and have selected the three following as best entitled to the premium, offered by the publisher of that work, namely:

- I. Plan by Mr. A. M. Simon, architect, Harrisburgh, Pa., for a banking-house twenty-five feet front, to cost from \$8000 to \$10,000.
- II. A plan by Mr. John M. Gries, architect, Philadelphia, for a banking-house thirty feet front, to cost from \$15,000 to \$20,000.
- III. A plan by Messrs. Potter & Roberts, architects, No. 29 Wall street, New-York, for a banking-house forty-five feet front, to cost from \$25,000 to \$30,000.

In selecting these in preference to various others submitted for our examination, we have had in view more particularly the plans for the main floor of the building, or the room intended for banking purposes, and its adaptation to light, ventilation, and the general convenience of the bank's officers.

J. D. VERMILYE,
Of the Newark Banking & Insurance Company.
GEORGE ELLIS,
Of the Bank of the Commonwealth.
W. T. HOOKER,
Of the Continental Bank.

Banking.—The premium essay on banking, prepared by Mr. Sabine, of Massachusetts, for this work, being out of print, we concluded to republish it in the Banker's Almanac, where it will be found with such modifications and additions as the author thought useful. Of this essay it is perhaps unnecessary for us to say more in commendation. A cotemporary, however, uses the following language in reference to the article:

"The Bankers' Magazine for February is a most interesting and valuable number. It contains well-executed drawings of four new banking-houses in this city, including that of Messrs. Duncan, Sherman & Co., a model building in all respects; also a dozen or more able articles on various practical topics. This excellent periodical should be in the hands of every bank officer in the United States. Nowhere, in our opinion, can so much valuable information be found. An article in the December number, entitled 'Suggestions to Young Cashiers on the Duties of their Profession,' (a premium essay,) should be printed in letters of gold, and have a conspicuous place in every bank-parlor. Those who wish to save fifty dollars a year in lawyers' foes, besides being reliably posted up on all financial matters, at home and abroad, should inclose five dollars to J. Smith Homans, New-York, and order the Bankers' Magazine."—New-York Independent.

VIRGINIA.—The bills from the Senate to extend the charters of the several banks near their expiration were passed by the House of Delegates by large majorities. The charters are extended, we believe, for a term of only six years. The banking capital of the State is somewhat enlarged.

DISTRICT OF COLUMBIA.—The memorial to Congress, adopted by the Merchanta' Exchange of the District of Columbia, contains the following comparative statement of banking facilities in that District:

BANKING FACILITIES OF THREE DIFFERENT PERIODS.

| 1821.  | Capital.                | Discounts.                 |
|--|-------------------------|----------------------------|

| Farmers & Mechanics' Bank,*  | 485,900                 | 577,813                    |
| Union Bank of Georgetown,  | 478,230                 | 406,298                    |
| Branch Bank of the United States,  | 500,000                 | 1,500,000                  |
| 1856.  | \$2,693,250             | \$3,578,320                |
| Bank of Washington,  Bank of the Metropolis,  Patriotic Bank,  Farmers & Mechanics' Bank,* | <b>‡900,000</b>         | 1,600,000                  |

The Branch of the United States Bank always paid its proportion to the mother bank on dividend account, and finally, when wound up, paid back its capital, \$500,000, and about \$200,000 besides, (say forty per cent additional.) The Bank of the Metropolis has always been profitable to the stockholders. It is probable it has divided enough above six per cent to pay back its stock.

While the banking facilities have been reduced nearly three fourths since the year 1821, the population of the District has doubled.

Indiana.—The annual report of the State Bank of Indiana gives the annexed results: Notes and bills discounted, \$4,678,780—an increase of \$480,196; circulation, \$3,335,726—an increase of \$357,380; gold and silver on hand, \$1,223,200—an increase of \$136,232; Eastern means on hand, \$704,534—an increase of \$193,567; surplus fund, \$1,228,301—an increase of \$119,345. Profits at the following rates have been divided to the branches on the capital stock, including extra dividends, during the past year: To the branch at Terre Haute, 28 per cent; Indianapolis and Fort Wayne, 21 per cent; South-Bend, 20 per cent; Michigan City, 17 per cent; Richmond, 16 per cent; New-Albany, 14 per cent; Madison, 13 per cent; Lawrenceburg and Vincennes, each, 12 per cent; Evansville, 11 per cent; Lafayette and Bedford, each, 10 per cent. In reference to the power of the Bank to discount, or to issue notes of circulation, ceasing after the first day of January, 1857, and that the closing of the business of the Bank (for which two years thereafter, until January 1, 1859, are given by its charter) may be expedited, as much as may be practicable, with as little pressure on the community as may be possible, the following resolution was unanimously adopted at the last session of the Board of Directors of the Bank, held during the present month:

"Resolved, That, in view of the approaching close of the Bank, it is recommended to the several branches, that they call in at least twenty-five per cent every four months on all standing or accommodation loans; and in future confine their discounts to strictly prompt paper, to be paid at maturity."

<sup>\*</sup> Georgetown.

Those who wish to be informed as to the market values of bank shares and insurance shares generally, will find the weekly circular of Mr. G. B. Satterlee very useful for reference. It is distributed gratis to his correspondents and friends. The shares of each bank and each insurance company of this city are carefully reported, with their dividends.

## Notes on the Money Market.

NEW-YORK, MARCH 26, 1856.

Exchange on London, at Sixty Days' Sight, 91 a 91 Premium.

THE month of February closed with a comparatively easy money market, and with favorable rates for exchange on Europe, inducing a belief in renewed or further relief in commercial and financial affairs. This expectation has not been fulfilled. The events of the month have produced a retrogade movement in stocks, and a more active demand for money; this, too, in the face of strong assurances from Paris and London of the reëstablishment of peace, whereby the business markets of Europe could become more settled, and likewise in the face of a very liberally extended line of accommodation from our city banks.

The advance in sterling bills from 9 and 9% premium as quoted towards the close of February to 9% and 9% as at present, is accompanied by renewed shipments of gold to Liverpool and Havre. The export to this date since the first of January, compared with former years, has been as follows:

| 1852,          | 1854,          | 1856, |
|----------------|----------------|-------|
| 1858 9.459.000 | 1855 4.515.000 |       |

The following is a list of the companies that recently failed to pay their interest at maturity; namely, I. The Buffalo and New-York City Railroad Company; II. Albany Northern Railroad Company; III. Plattsburgh and Montreal Railroad Company; IV. Ohio and Indiana, (resumed payment since;) V. Madison and Indianapolis, (resumed payment since;) VI. Peru and Indianapolis, (will resume in a few days:) VII. Akron Branch, (Cincinnati, Cleveland, and Zanesville;) VIII. Springfield, Mount Vernon, and Pittsburgh Railroad Company; IX. New-Albany and Salem Railroad Company; X. Maysville and Lexington Railroad Company, (mortgage to be foreclosed on 28d April, 1856;) XI. Ohio and Mississippi Railroad Company, (extension proposed;) XII. Dauphin and Susquehanna Railroad Company; XIII. Sacketts Harbor and Elisborough Railroad Company; XIV. New-Haven and New-London Railroad Company.

The effect of this will be to check the foreign demand in American securities of an inferior order. We have reason to know that within twelve months past considerable amounts of railroad bonds and other securities from the United States, have been introduced into the Hamburgh market, and other continental points, with such tempting rates as procured seles. The holders, upon recent

inquiry on this side, find that they were deceived, and we shall find that hereafter there will be a much closer scrutiny into the character of American securities offered in the European markets. We have at present no centre or point where information can be readily and reliably obtained as to the stability and management of distant railroads. The railroad interest has become one of the first importance financially and commercially; the investments in them being double the aggregate bank capital of the country. A journal devoted to these subjects, and conducted with independence and firmness, is at present much needed.

It is stated by the Pittsburgh papers that the City Councils of Pittsburgh and the Commissioners of Allegheny county, have agreed to indorse the Bonds of the Steubenville and Pittsburgh Railroad Company, in an amount not exceeding one million and fifty thousand dollars; being the amount of stock held by the city and county. This movement will insure the immediate completion of this important link. Although Philadelphia and Pittsburgh are more directly interested in this work, yet it is of no small importance to Baltimore, connecting as it does the Steubenville and Newark with the Pennsylvania and Ohio roads.

On the 12th of March the suspension of the Atlas Mutual Insurance Company of this city was announced. In consequence of heavy losses during the past winter, the Company cannot promptly meet its liabilities, and a receiver has accordingly been appointed. With a large number of our merchants the loss will fall mainly from premiums paid on risks not yet terminated, as such risks must be reïnsured elsewhere.

On the 18th inst. the Wall-street market was much excited by telegraphic intelligence to the effect that the lake steamers of the Nicaragua Transit Co. had been seized by Gov. Walker, upon the plea of a heavy indebtedness of the Company to the government of Nicaragua for transit charges. The prompt effect upon the stock of the Nicaragua Transit Company was to force the shares from 22½, at which they left off the day previous, to 18½ a 19, and sales were effected on the second day as low as 14. The stock has long been a merely speculative one, and would not be touched by capitalists generally. The affair will probably now be thrown into the Department of State at Washington, or the accredited agents of the government abroad. The Company deny any indebtedness to the Nicaraguan government.

The adjustment and liquidation of the claims upon Texas, and the distribution of the funds appropriated by Congress, is a subject of satisfaction to the whole country. The assent of Texas to the law of Congress will thus put in circulation over seven millions of dollars. We give the Treasury Circular on the subject in another part of this No.

We resume our summary of the weekly movement of the New-York City banks:

| 185   | 5. Loans      | Specie.          | Circulation. | Deposits.         | Sub-<br>Treasury. | Aggregate<br>Coin. |
|-------|---------------|------------------|--------------|-------------------|-------------------|--------------------|
| July  | 7, \$97,852,4 | 191 \$15,881,098 | \$7,743,069  | \$55,647,240      | \$2,084,500       | \$17,465,500       |
| Aug.  | 4 100,118,5   | 69 15,298,858    | 7,642,903    | 83,279,994        | 8,225,500         | 18,528,800         |
| Sept. | 1, 100,486,9  | 70 12,852,828    | 7,620,178    | 81,057,210        | 5,462,800         | 18,315,100         |

The New-York banks have never reached such a heavy deposit line at any previous period, and notwithstanding the large accommodations, money still commands a high price in Wall street. Strictly prime paper readily commands 9 to 10 per cent; and good bills, well indorsed 19 per cent.

In the New-York Legislature there is a renewed movement or tinkering with the bank laws. The banking system of the State works well at present, and if more consistency or uniformity were pursued towards them by the Legislature, the banks and the people would be better off. The proposition now pending at Albany, is to compel the banks to reduce their line of "loans on call." With due deference to the legislative committee, it may be asserted that the banks severally and collectively are the best judges of what is most advantageous for themselves and for their customers. It is well known in mercantile communities that the heavy cash liabilities of these institu-

tions compel them to keep on hand a large cash reserve, both of coin and circulation, and that a considerable portion of this is loaned out "on call," with stock collaterals as security. This species of loans is considered as cash, being repayable at one day's or even one hour's notice. If the banks were deprived of this source of profit, and limited (unnecessarily we think) by law in this respect, it follows that these large sums, as now loaned out, would be retained as cash. Assuming the average to be five per cent of the gross loans, the reduction would be in this city alone about five millions of dollars. If such a law were passed, it would compel the banks to convert existing loans of this character into paper at ten days' (or even shorter) date.

In Boston there is a more liberal feeling on the part of their banks, and the line of discounts has been extended from \$49,000,000 in December last, to \$52,000,000 at this time, as may be seen by the following table:

|                | Capital.                      | Loans.               | Specie.     | Due from<br>other Banks | Due to<br>other Ban | ks, Deposits. | Circula-<br>tion. |
|----------------|-------------------------------|----------------------|-------------|-------------------------|---------------------|---------------|-------------------|

Three loans are now proposed in behalf of the State and the city. The first is a six per cent loan of one million of dollars, the proceeds to be applied to the enlargement of the Eric and other State canals. For this loan, bids were received until the 25th inst., transferable certificates of stock will be issued in the name of the people of the State of New-York, bearing interest at the rate of six per cent per annum, payable quarterly, and the principal reimbursable on the first day of November, 1873. The aggregate bids were about \$5,000,000: the accepted bids ranged from 116.71 to 118.05, yielding a premium of \$170,709, or an average of 17.07 per cent.

The second is a five per cent city loan of \$2,500,000; and the third, a six per cent loan of \$1,600,000, both to be known as "Central Park Fund Stock." These city loans are to be appropriated to the improvement of an extensive park in the centre of the island. The five per cent bonds will be reimbursable in forty-two years, (first day of July, 1898,) interest payable quarterly. The six per cent bonds will be redeemable in February, 1859, interest payable semi-annually, The Act of 1858, for laying out the park, provides for levying a tax annually for the payment of interest on the stock to be issued; and the Act of 1812, made applicable to this loan, provides not only for pledging the faith of the Mayor, Aldermen, and Commonalty for the final redemption of the stock issued, but also enacts that all the revenues of the Corporation "are hereby pledged and appropriated for the payment of the interest which shall become due on the said stock, and shall continue so pledged until the final redemption thereof; and that, in case the said revenues be not sufficient to satisfy and pay the whole of the said interest, then, and in that case, the faith of the State shall be, and the same is hereby pledged to pass such acts as shall, from time to time, he necessary, authorizing the Mayor, etc., to raise by tax," such sum as shall be requisite to supply every such deficiency. In addition to this, the 7th section of the act of 1858, for taking land for the park, declares that all the land thus taken shall be "irrevocably pledged" for the payment of the debt created therefor.

The Marysville and Lexington Railroad, with all its appurtenances, locomotives, freight, and passenger-cars, etc., is advertised to be sold on the 23d day of April, at Lexington, Ky., for the benefit of the mortgage-holders, and on a credit of six, twelve, eighteen, and twenty-four months. The purchasers will be required to execute bonds for the purchase money, having the force of ludgments, with good security, to be approved, of one of the following kinds, to wit: 1. Personal security; 2. First Mortgage bonds of the Maysville and Lexington Railroad Company. 3. Mortgages in real estate in counties near this railroad or the Covington Railroad. 4. State and United States Bonds. 5. A first mortgage on a productive railroad.

The Virginia House of Delegates has passed to engrossment, by a vote of 66 to 56, a bill to establish a Board of Loan Commissioners, which is intended to supersede the Board of Public Works, so far as their powers extended, to negotiate loans and borrow money. The principal provisions of the bill are:

"1st. The Governor, Auditor of Public Accounts, Treasurer, Secretary of the Commonwealth, and Attorney-General, shall constitute a Board, under the style and name of 'The Commissioners of Loans.' 2d. All power heretofore vested in the Board of Public Works to make loans, sell the bonds of the State, and otherwise borrow money on her credit, is revoked, and every such power is transferred to, and vested in, the Commissioners of Loans. 3d. The said bonds shall never, on any pretext whatsoever, be hypothecated, or in any manner pledged, etc."

The Twenty-Third Annual Report of the Philadelphia Board of Trade shows that the merchants of that city are zealous in their efforts to obtain legislative aid; as borrowers, not as lenders, they are aware of the importance of having a less restricted system for capitalists. Their Report gives an interesting account of the action of the Board during the year, and alludes particularly to the education and treatment of seamen; the census of the City; the insolvent laws; the Steubenville and Indiana Railroad; the improvements at League Island; the Delaware Front; the Trans-Oceanic Telegraph; and the usury laws. With regard to the last-named, this language is held:

"Although unsuccessful in previous efforts to obtain a repeal or modification of the usury laws, yet your Board, esteeming the object to be an urgent commercial necessity, have recently memorialized the Legislature upon the subject. While locking up a vast amount of capital by an arbitrary and inflexible standard of interest; diverting to rival markets another portion which finds elsewhere a higher premium for its use than is obtained here, depriving law-abiding citizens of one profitable and useful mode of employing their pecuniary means, while encouraging others to disregard and violate the public statutes; impeding and embarrassing trade and credit in all their multifarious relations by a restriction of the rates of money loans, without reference to the fiscal fluctuations which should regulate the matter; and subjecting the needy borrower to the cruel extortion which, in a season of financial pressure, may be practised upon his necessities, the usury laws serve no good and wholesome purpose whatever.

"It is needless to enter upon any elaborate argument in this report to show the expediency of a change in these laws. As the opposition to any reform proceeds chiefly from an apprehension prevalent in the interior, that if a higher rate than the present legal interest be allowed, capital will be withdrawn from the country to the cities, we deem it sufficient to say, that as the law against usury is not generally respected in the great centres of population and commerce, capital will naturally flow into them from all quarters where it cannot command the highest prices paid for its use; whereas the release of the currency from any general legislative restriction, would equalize the distribution of money, rendering it proportionally as abundant and accessible in the

rural districts of a State, as in its crowded emporiums."

The tenor of the private letters per steamer, distributed last week, has imparted a better feeling to the Stock Board; and with more activity, we find the tendency improved. Illinois Central Construction and Free Land Bonds are in demand, both in England and on the Continent of Europe, and the orders by last mail are nearly confined to this security. Frankfort papers report an active demand for American securities, but the orders from that quarter being extremely limited, we rather suggest that these reports are circulated to induce consignments to that market. Looking nearer to the present financial movements of the Continent and of Germany, particularly where, within the last five years, all classes of American securities sound, and, we are sorry to say, unsound stocks and bonds also have been freely introduced, we find that new fields are opening at an extension hitherto unknown in the annals of finances, and we can hardly expect any orders thence. The number of banks established within the last three months, and those now going into operation, absorb a capital of at least 140 million thalers, equal to one hundred million dollars, and the excitement is far from being over. For instance, the capital required to establish a Bank at Bremen is 21 million thalers, while 400 millions were subscribed. The dividend for 1855, declared by such of the new banks being in operation for a year or two, in nearly all cases exceeds 8 per cent, equal to the rate of interest paid by any of our Railroad Companies. Besides banks, a large number of other enterprises, as railroads, mines, etc., absorbing a similar amount of capital, has been started during the last six months.

From the Continent of Europe a more active demand is reported for American Securities. The carelessness of some of our railroad companies in providing the interest on their bonds, must have the effect to check confidence among foreign bond-holders. The New-Albany and Salem Railroad Company, in a circular to the creditors of the Company, propose to convert the interest on its ten per cent and eight per cent bonds, maturing within one year, and the interest on its seven per cent bonds, maturing within two and a half years, into ten per cent bonds, secured by a mortgage on the rolling stock, and redeemable in five years. The bond-holders will perhaps accept this proposition, to avoid further trouble.

Viguna correspondence mentions that not only is the railroad mania violent in Austria, at present, but speculation has taken possession of all classes there; and it is credibly asserted that there inevitably must be "a terrible smash" if peace be not the result of the Conference.

The Austrian Credit Bank has agreed to take shares in the Western or "Empress Elizabeth" Railroad to the amount of 20,000,000 florins. The houses of Rothschild will be concerned to half that amount.

Our stock market, during the week closing to-day, has undergone a decided change for the better; and from a state of general depression has recovered to great activity at enhanced rates. The favorable prospects for the future in our own country and abroad almost warrant a continued rise of prices. Looking at our railroads, we find all the impediments removed which for the last two months nearly suspended the traffic: all the depôts, East and West, are crowded with produce and merchandise waiting for transportation, thus taxing the roads to their utmost capacity. The trade of this city and of the country is fully reviving, and stringency of money, for years past the stereotype complaint of Western and Southern merchants, seems to have nearly disappeared. The large number of banks established within the last twelve months, has created many facilities for circulation, and generally proved a benefit to mercantile communities. Never before were the heavy payments of a spring season so promptly met as this year: importers and jobbers seem to be equally well provided. Cotton, one of our leading staples, commands satisfactory prices in the English and Continental markets, and peace, now beyond doubt, will have the effect to increase the demand. Bread-stuffs are not selling at the expected high rates, but prices are still enough enhanced to pay the farmer, and our population at large enjoys the benefit of cheaper food. Confidence in American securities is reëstablishing in foreign markets, and even those parts of the Continent hitherto opposed to any security in the shape of American stocks or bonds, are now coming in as large buyers. The prevailing extension of monetary institutions on the Continent of Europe, and in Germany particularly, on the present scale, can not last long: it will soon be found that the field of operation is too limited. The tide of foreign capital, therefore, will turn again toward the Great West, where money and labor can be more advantageously employed than in the old world. Many of the obstructions preventing emigration being removed, we look again for thousands and hundreds of thousands of industrious and wealthy hands, coming to our abores to cultivate our soil and increase our capital.

The movement of the Bank of England since January 1st, has been as follows:

|                     | Bank Notes<br>Unemployed |             | Loans and<br>Discounts. | Bank Notes<br>Unemployee | e Coin and<br>i. Bullion. |

Of the English money market, up to the 9th inst., the Times says:

"In the money market there has been an active demand. In general, the supply has been equal to it; but occasionally the pressure has been excessive, and consequently there is no abatement in the rates which weigh so heavily upon commerce. On the Stock Exchange 54 per cent may be quoted as the average rates for advances for short terms on government securities. In the discount market it has varied according to the quality of the paper offering, but nothing has been done under the Bank minimum. The pressure, to some extent, is attributable to the commercial acceptances of the past month having fallen due this week, and to the payment of the second portion on the deposit on account of the loan. An installment of 25 per cent, amounting to £1,250,000, is due this day week, the preparations for which naturally influence the value of money at the present time. Another installment of an equal amount is due on the 29th inst."

#### BANK ARCHITECTURE.

PREMIUM PLANS FOR COUNTRY BANKING-HOUSES.

We have in recent Nos. of this work issued a prospectus or invitations for plans of country banking-houses: and in pursuance thereof we have received numerous drawings from competent architects. These designs were submitted to a committee of bank officers, consisting of Mr. William T. Hooker, President of the Continental Bank; Mr. George Ellis, Cashier of the Bank of the Commonwealth, New-York; and Mr. J. D. Vermilye, of the Newark Banking and Insurance Co. This Committee awarded the premiums to the following architects.

I. Design for a banking-house with a front of thirty feet; to cost about fifteen or twenty thousand dollars: by Mr. J. M. Gries, of Philadelphia.

II. Design for a banking-house with a front of twenty-five feet; to cost about eight or ten thousand dollars: by Mr. L. M. Simon, of Harrisburg.

III. Design for a banking-house with a front of forty feet; to cost from twenty-five to thirty thousand dollars: by Messrs. Potter and Roberts, New-York.

We propose to publish these several plans in detail for the information of that portion of our readers in the interior, and at a distance, who have not access to competent architects and builders. Accordingly in the present No. we present design No. I. of the above series, being

the plan offered by Mr. J. M. Gries, of Philadelphia, architect of the Commercial Bank of that city, and of other bank structures. This will be followed in the June and July Nos. by the other plans proposed by Mr. Simon, and by Messrs. Potter and Roberts.

#### General Specification of Plan by J. M. Gries.

The submitted plan and elevation are for a building upon a lot thirty feet front. The accommodation given is a banking-room 26 by 40 feet; a room upon the same floor, of 13 ft. 6 in. by 17 feet, for the president and cashier, and meetings of the directors. A general fire-proof and a private one for the cashier: a passage from banking-room leads to the yard, where will be placed the water-closets and watch-house; another passage from cashier's room leads into the former, isolating the fire-proof. The extension of building to the rear gives, with the upper stories of main buildings, roomy and convenient accommodation for the cashier's residence. In the basement is the kitchen, with access from exterior and interior; a fine stair-case, well lighted by sky-light and side-windows, leads to the upper stories, in which on the second, is a large parlor, chambers with dressing and bath-rooms. The third floor is divided into other chambers and bed-rooms; giving in all five chambers and two bed-rooms.

The building is to be heated by air-furnaces in cellar, the ventilation to be secured by the erection of a large shaft over the fire-proof, into which branches from the ceilings of the rooms will be led. This flue is caused to act by gas-flue from the grate in cashier's room. By this arrangement a proper draught upon the air of the rooms is attained, and by same action upon the furnaces we secure a circulation of warm, fresh air, to replace that which is vitiated, raised to the ceiling and drawn off by the shaft.

The heights of stories of front building to be, first, 16 ft.; second, 14 ft.; and third, 10 feet in clear; of back building they will be, first, 12 feet; second, 10 ft. 6 in.; third, 9 ft., and basement 9 ft. in clear.

The materials of construction to be: For front and base of flank, freestone, with the window architraves and the cornice of cast-iron. The wall surface of front and flank between windows, to be rough-cast, painted, and sanded to the color of freestone used walls to be of brick. Floors of first and second stories to be fire-proof, with iron girders and brick arches between. The windows of first story to be secured by iron shutters sliding into the wall above windows. The roof to be covered with galvanized iron.

For security from burglars dependence is placed upon the construction of fire-proof, which will have its external walls of hard brick with iron lacing in joints; its internal lining of hard flag-stone, well secured at joints and angles by iron dowels. Entrance by mining from below or above to be guarded against by black flag-stone floors, well doweled at joints, and further secured from lifting or dropping the stone by strong iron bars on inside. The foundation to be arched and open to inspection. The doors of chilled iron, with solid frame. Being isolated, every wall is exposed to view.

In a town convenient to a good supply of the required building material at fair rates, this design is estimated to cost, finished in substantial manner, twenty-six thousand five hundred dollars.

#### FOREIGN BANKING INSTITUTIONS.

#### I. London and Westminster Bank.

At a meeting of the London and Westminster Bank, held January 16th, 1856, the Lord Mayor presiding, the dividend declared was at the rate of 6 per cent per annum, together with a bonus for the halfyear of 5 per cent upon the paid-up capital, (making a total distribution at the rate of 16 per cent,) and the report and accounts were unanimously adopted. It was stated by the chairman that business continues to make satisfactory progress, and that the new branch at Temple-bar has fully realized the expectations of the directors. Although the war, it was remarked, has recently caused a considerable increase in the value of money, trade has been well supported, and the number of failures has been less than in ordinary times. Under these circumstances, the banking institutions of the country have been exposed to few losses, and in the case of the London and Westminster Bank they have proved even below the average. Owing to the confidence of the public, and of the old customers of the establishment, the amount of deposits has been further augmented, and since the arrangement of the present accounts the total has reached nearly £9,000,000. This confidence is believed to be strengthened by the mode of publishing the accounts, distinguishing the large amounts invested in government securities, and retained as cash in hand. With management such as has distinguished the past, the directors, therefore, notwithstanding the appearance of active competition, are encouraged to believe in a continuance of prosperity, and to hope that the dividend, now ranging from 15 to 16 per cent per annum, if it be not increased, may, at all events, be maintained. Subjoined is an abstract of the report and accounts:

"The directors have to report that, after making provision for all bad and doubtful debts, paying the income tax, setting apart £2000 towards the new buildings in Lothbury and Bloomsbury, and presenting a gratuity of 10 per cent on their salaries to all the officers of the establishment, the net profits of the Bank for the last half-year amount to £78,494, which, added to £7725, the unappropriated profits of the preceding half-year, make a total of £86,220. Out of this sum, the directors have allowed interest on the rest, or surplus fund, at the

rate of 5 per cent, and they now declare a dividend to the shareholders at the rate of 6 per cent per annum, and also a bonus of 5 per cent upon the paid-up capital. After these payments are made, there is a balance of £2773 to be transferred to the rest or surplus fund, which now amounts to £144,109.

"The directors have to present to the shareholders the accounts of the Bank, which show that the net profits realized during the past six months, and the balance of £35,124 brought forward on the 30th of June last, amount to £80,355. By this result the directors are enabled to declare a dividend at the rate of £12 10s, per cent per annum, and a bonus of 14s. 3d. per share, and to carry the sum of £105 to the credit of the guarantee fund, which now amounts to £160,853. The dividend and bonus, free of income-tax, will be payable on and after Friday, 25th inst.

#### III. The Bank of France.

[We have not seen the Annual Report of the Bank of France for the past year—a document possessing unusual importance at this time—but we find a reliable summary of the items in the letter of the Paris correspondent of the Philadelphia North American, under date of February 14.—ED B. M.]

The great event of the week in the financial world has been the publication of the report of the Bank of France for 1855, by M. de Argout, the Governor. The statement is a very remarkable one; and when I have mentioned a few of its leading incidents, you will scarcely feel surprised that its effect, coupled with a declaration of dividends amounting to two hundred francs per one thousand francs share, or twenty per cent per annum, should have been to send up bank shares 205 francs at a bound, (quoted at 3495 francs.) The commercial business of the Bank of France has certainly, within the last few years, and especially during the one just elapsed, assumed proportions of the most unusual magnitude—proportions which under any circumstances would be remarkable, but which are still more so when it is recollected that the capital of the Bank of France amounts to no larger a sum than ninety-one millions; scarcely more than one fourth the capital of the Bank of England, and greatly below that of the Bank of Vienna, and the leading capitals of Europe. The report, indeed, of M. d'Argout seems to go far towards corroborating an opinion I recently transmitted to you on high authority, that the French nation was preparing to launch itself into an era of commercial activity and enterprise such as it had never before entered upon; and that the conclusion of peace was alone wanting to turn the whole force of society, en masse, from its old traditions of glory and of war, to the more fertile lucubrations of commerce and industry. "The year commences under favorable auspices," M. d'Argout concludes his report—"glad tidings have been heard amongst us—let us hope that France will ere long enjoy again the blessings of peace."

The first noticeable point in the report of the Bank, is the enormous increase in the amount of its general transactions with the commercial world. These, after a rapid advance since 1852, are stated at no less a sum than 4863 millions for 1855, or nearly one milliard over those of the preceding year! In these transactions the discount department, of course, figures for the largest share, the business there having reached, during the past year, the amount of 3762 millions, or an augmentation of 818 millions over that of 1854. At no period has this activity been more remarkable than during the past six months, and in spite, as it were, of the restrictions imposed by the so much disputed policy of the bank directors. After varying between 340 and 380 millions per month, from July to November, it reached, in December last, a total of 513 millions for the single month. In this department, therefore, and in the part which it plays in the general commercial business of the country, I think I cannot be wrong in claiming for the Bank of France by far the first place over any other similar establishment in the world.

A remarkable fact stated by the report is to the effect that "the Bank has not sustained loss by any single failure in the course of 1855." Another equally satisfactory statement is the punctuality and facility with which obligations have at all times been met. amount of bills falling due on particular days was sometimes such as to deserve, M. d'Argout says, especial mention. Thus, on the 31st October, 65,417,000 francs were collected by the Bank in Paris, upon 54,692 bills, divided over 22,632 commercial houses. There is, as you are probably aware, no clearing-house in Paris, as in London; nor were bankers' checks in use before the recent introduction of them by the Credit Mobilier—a formidable and growing adversary,

by the bye, even to the Bank of France itself.

Another striking feature of the report is the extension which it testifies as being continually given to the provincial branches of the establishment. This is undoubtedly carrying out the intentions of Napoleon I. when he originally founded the "Bank of France." But long the name of the "Bank of Paris" was the only one to which the founder was really entitled. Now, however, it numbers thirtyeight branches, or succursales; three new ones, at Arras, Dijon, and Dunkirk, having been created in 1855. The branches have shared in the increased activity to the amount of more than half a milliard; their transactions altogether figure for a total of 2,745,000,000f., or more than one half of the whole—another good sign of the generally diffused prosperity and commercial activity of the country. The most remarkable augmentation is visible in those of Marseilles, Lyons, Bordeaux, Lille, and Valenciennes.

On the subject of bullion, and the efforts made to force its entrance into this country, M. d'Argout contents himself with a somewhat dictatorial statement of facts, without condescending to enter upon any defence of the measures adopted. The purchase of corn, and the payment of the army in gold, necessitated large exports of bullion; at the same time, advances on railway and other securities to subscribers to the last national loan—amounting, at its close, to one hundred and eightyfive millions—helped to drain the bank coffers. Hence the restrictions imposed, and bullion imported at a heavy cost. At the end of March, 1855, the metallic reserves amounted to 451 millions; in July following, to only 310 millions. It was then the Bank commenced purchasing gold and silver with great rapidity, to the extent of 260 millions before the close of the year, and at an expense of four millions. "These sacrifices are not yet at their limit," M. d'Argout tells us, " and on the 31st of January, the precious metals imported had reached the value of 298 millions." The only defence of the restrictive measures, and it is one certainly very much to the purpose, is made by the observation, "that they have not proved an obstacle to the Bank continuing its discounting transactions in proportions hitherto unheard of."

It is most anxiously hoped here, that immediately on the confirmation of peace, the Bank of England will lower its rate of discount; that the Bank of France will, as a matter of course, follow the example; and that then, at last, will return the beaux jours, so ardently expected by the French commercial world, of bills again at 90 days.

The report, which I think I mentioned to you last week, of a government subsidy of one hundred millions to the *Credit Foncier*, for the encouragement and impulsion of agriculture throughout the country, has had its effect upon the shares of that company, which, long stagnant, have suddenly gone up 120f. per share. In the public securities all is, of course, expectation; but the *rente*, 3 per cent, holds firm, with little variations, at from 73 to 75 francs, manifesting a strong confidence in the result at hand, and evidently prepared for a rapid spring upward at the first symptom of a decisively favorable tendency.

#### IV. The Royal Bank of Prussia.

The Annual Statement of the Royal Bank of Prussia has recently been published at Berlin. It contains very interesting reports on general commercial and financial subjects, and speaks of the business of the year 1855 as having been by far more active and remunerative than could have been expected, the community at large having to contend against the influence of a protracted war abroad, and the paralyzing effect of high prices of provisions and necessaries of life generally at home. Public enterprises, such as railroads, mines, etc., have met with extraordinary successs, the capital wanted in all cases coming forth very freely. The beneficial influence of such a sound state of financial affairs was not lost on this institution, for an unusual increase and expansion of the transactions of the Bank at Berlin, as well as throughout the kingdom, excites our attention.

The net profit, however, is not as large as might be inferred from the above, for it amounts in all to only 445,515 thalers, (about 20,000 th. less than in 1854,) but this apparent contradiction can be easily explained, as many of the loans were available for but very limited periods. State, city, and railroad securities, held at their nominal value of 12,231,315 th. since 1854, were partly disposed of in the course of 1855, and the amount of such paper on hand at the close of the latter year amounted to only 9,400,040 th. The investment of the Bank in exchange and Lombard business, reached the extraordinary large sum of forty-seven and a half millions. The total transactions of the year amount to 1700 millions, which is an increase of about 300 millions against those of the year previous. The capital of the Bank shows a decrease of about 44,000 th., caused by the decrease of deposited capitals, which amounted to 298,000 th., against an increase of only 254,000 th., derived from the government and the sinking fund; the amount of capital on the 31st of December, 1855, was 57,713,039 th.

The business done in exchange shows an extraordinary increase. The Bank received 101,535 discount drafts for the collective amount of 91,931,618 th.; 175,113 drafts on domestic cities, amounting to 140,023,867 th.; 3677 drafts on foreign cities for 4,706,721 th.; 10,529 drafts for collection, for 1,388,804 th.; making a total of 290,854 drafts for the large amount of 238,051,011 th. The profit derived from this branch of the business amounts to 1,171,504 th.; exceeding that of the previous year by 217,864 th. An equal degree of activity is noticeable in the Lombard department; 9525 loans

amounted to 67½ millions, against 56½ millions in 1854; 3164 of these, representing 10½ millions, were on the books at the beginning of the present year.

The gross earnings of the Bank for the year were 2,148,850 th.; which, after deducting 960,458 th. for expenses and interest paid on deposits, leaves a net profit of 1,188,397 th. Of this amount, 3½ per cent, equal to 411,291 th., have to be paid to the government and to other persons having capital invested in the institution. The balance, which, with 28,590 th. received from extraordinary sources, amounts to 805,695 th., is equally divided between the government and the shareholders, after deducting 201,423 th., which are transferred to the Sinking Fund. The amount due to shareholders is sufficiently large to warrant a dividend of 6½ per cent against 6½ per cent in 1854.

In order to facilitate the business in the provinces, agencies have been established at Dortmund, Westphalia; Halberstadt, Saxony; Neisse and Ratibor, Silesia; Johannisburg, Eastern Prussia; Coblentz, Rhenish Prussia.

#### V. The Credit Mobilier, Paris.

[We extract the following account of this Paris banking concern from the Journal of Commerce:]

When the present Emperor of the French was merely the Prince President of the Republic, it was evident, as is usually the case after violent changes in any government, that to restore public order and tranquillity, capital and labor must both be fully employed, the industry of the country must be thoroughly developed, and the confidence of moneyed men must be fixed again in the institutions of the land.

Among other plans suggested at this time, and designed in part for this end, the *Credit Mobilier* received the official sanction of the French Government, on the 18th of November, 1852, a fortnight before the *coup d'état*. From its establishment until quite recently, this great banking-house has generally been considered a favorite of the Emperor, and this fact, with the avowed and official coöperation of such men as Pereire, Fould, Mallet, and others well known in the commercial circles of Paris, has added much to the reputation and prosperity of the enterprise.

The capital of this joint stock company is 60,000,000 francs, (say \$12,000,000,) all paid up in 120,000 shares, of 500 francs each. Besides this, the company is at liberty to issue bonds or obligations to the amount of ten times its capital, or 300,000,000 fr., (say \$60,000,000,) such bonds being payable, not on demand, but over a period of ninety years. These bonds draw interest annually, and for their ultimate redemption, a sinking fund is set apart from the earnings of the company.

The managers of this enormous capital are the 200 shareholders who own the largest amount of stock. They meet annually in April. The business is more directly controlled by a council of fifteen, and an executive committee of five members, who, in addition to their profits as shareholders, have, as a recompense for their services, and

as a stimulus to sagacious enterprise, additional returns proportioned to the earnings of the year.

From these statements in regard to the capital and the managers, we proceed to examine the functions of the society as set forth in the official report of M. Pereire, the acting head of the company. According to this gentleman, the society should be regarded in four points of view.

In the first place, the Credit Mobilier is an Industrial Commanditary Association, (Societe Commanditaire l'Industrie.) We have no real English phrase exactly corresponding to the French. A partnership en commandite is one in which there are silent or sleeping part. ners, responsible only for the amount which they contribute to the general fund. They are called commanditaires. If an association becomes a commanditaire in any enterprise, it is responsible, like a private person, only for a specified and pre-determined amount. This is a function which the Credit Mobilier exercises. It interests itself in new enterprises which are likely to suffer either because they are unknown or because they have an insufficient capital. It lends the influence of its name, and it subscribes to a limited amount for shares. The society engages not only in new undertakings, but in business already established. It purchases shares or subscribes for bonds, choosing, as a general principle, to invest in those enterprises which have in the highest degree a character of public utility. Railroad companies, for example, have received great cooperation from the Credit Mobilier.

#### VI. Madrid.

The government measure respecting the new organization of the Bank of San Fernando, is now before the Cortes. Senor Bruil having declared in favor of there being only one bank of issue as regards notes payable to bearer, there is no chance of any scheme which includes another bank of issue at Madrid passing. The principal features of the new measure are, that the Bank of San Fernando is to increase its paid-up capital from 120,000,000 of reals, its present amount, to 200,000,000, and to establish branch banks at Seville, Malaga, Santander, and several other large seaports and provincial capitals, where, as well as in Madrid, it is to be the sole bank of issue, and may augment its circulation till it reaches three times the amount of its paid-up capital. A dividend of 3 per cent has been declared by the Bank upon its shares for the half year ending the 31st December last.

A new bank has been announced, to be founded at Constantinople, and to be called the Ottoman Bank, with a capital of £500,000, in £20 shares. The board includes members of leading London banking establishments, and the chairman is Mr. Layard, M. P.

At Bremen, a bank, with two and a half millions thalers, is going into operation. It is to be called the "Bremer Bank." At the head of this enterprise, we note the name of several leading houses, favorably known here by the high reputation of their branch establishment here.

#### COINS AND COINAGE.

Coins, Seals, Etc.—At the sale of Coins, Seals, etc., by Messrs. Sotheby & Wilkinson, which concluded on Tuesday last, a tetradrachm of Athens (size, 6 inches; weight 265% grains) representing, on the obverse, a helmeted head of Minerva or Pallas; reverse, an owl, brought 401.—a document on vellum, with royal scal in vellow wax attached, on the truce between our Henry the Fourth and the Duke of Burgundy, but without signatures, produced 151 15s.—a didrachm of Aetolia brought 51. 17s. 6d.—a penny of Offia (without portrait,) 31. 10s.—an angel of Elizabeth, 81. 2s. 6d.—a penny of Harthaenut, struck, it was believed, in Denmark, brought 21. 15s.—another of Coenwlf, 51. 5s.—a denarius of Carausius, 81.—a tetradrachm of Camarina, 21. 18s.—Selinus, a fine specimen, 61.—a decadrachm of Syracuse, 51. 5s.—a tetradrachm of Chalus, 41. 10s.—another of Philetærus, King of Pergamus, 81.—Athenæum.

PROCEEDINGS OF THE NUMISMATIC SOCIETY, LONDON, NOVEMBER 29, 1855 .-W. S. W. Vaux, Esq., President, in the chair. Mr. Bergne read a paper "On Unpublished Coins," describing two pieces, one of Edward the Sixth, and the other of Vespasian, both believed to be unique. The former appears to be a gold jetton; the latter is a denarius, remarkable as differing from all others known to the writer, both in obverse and reverse. Most probably it was struck at Rhodes, when Vespasian visited that island, or when he deprived it of independence. Mr. Williams read a paper "On some remarkable Chinese Coins," illustrated by interesting observations on the probable antiquity of a metal currency in China, and the various forms of money which have been there used. Mr. Poole read a letter from Mr. Burgon to the President, "On certain Greek coins recently acquired by the British Museum." Four of these were Corinthian, including a remarkable one, bearing as its types the portrait and monument of the famous Lais. Of the remaining two, one was the first that has been discovered of Gortyna in Arcadia, and is further interesting as proving that town to have been included in the Achæan League. The other was of Orchomenus, and tends to indicate a Bootian League or confederation. 'The President read a paper "On two Medals of Indian Princes." One of these is of the celebrated Mogul Emperor of Delhi, Shah Akbar, the contemporary of Queen Elizabeth. The other is Shah Alem, the last sovereign of the same line, and must have been struck at the time when he abandoned the British protection, and fled to the Mahrattas, A.D., 1771.—Athenœum.

SILVER.-A good move in the right quarter. The Finance Committee of the U. S. Senate have matured a project designed to lead to the gradual abandonment and ultimate rejection of the small Spanish silver coins as part of the circulating medium, and that it will be forthwith submitted to legislative action. The result of the experiments to ascertain the value of the Spanish sixteenth, eighth, and quarter of a dollar, is reported to the Committee as indicating the first to be worth a fraction over five cents, the second about eleven, and the quarter between twentythree and twenty-four cents. The bill they have framed is believed to provide, that the existing laws authorizing the circulation and establishing a value of all foreign coins, except the Spanish fractional divisions of the dollar, be at once repealed. As to these fractions they allow them to be circulated for two years at the value of 5, 10, and 20 cents respectively, and thereafter they are to be excluded altogether from circulation. But at the mint they will at all times be received as bullion; and paid for by weight. The effect of this will doubtless be, that they will be collected and sent to the mint as the best market—the price there obtainable exceeding their value in circulation. This result will be promoted also by classifying them with our own decimal divisions. The public having then but one measure of value or price in small transactions, will have no motive for persisting to retain in use the small Spanish coins; and thus that most annoying imposition, by some dealers systematically practised, and chiefly to the prejudice of the poor, of filching a fraction of a cent from every purchaser unprovided with even change, will be effectually got rid of.

#### DAMAGES ON BILLS OF EXCHANGE.

Correspondence of the Bankers' Magazine.

WILMINGTON, N. C., April 8, 1856.

J. Smith Homans, Esq., Editor of Bankers' Magazine:

DEAR SIR: I observe in the number of the Magazine for this month (page 757) you state there is still some uncertainty as to the damages on bills drawn or indorsed in this State on Louisiana, and returned protested for non-payment or non-acceptance.

On the 1st of January, 1856, the new "Revised Code" of this State went into operation, by which the damages on all protested bills drawn or indorsed in North-Carolina "upon any person or corporation in any other of the United States, or in any of the territories thereof," are fixed at three per centum upon the principal sum of such bill. No further change was made in reference to this subject-matter, but it is very certain that prior to the operation of the new code the damages on such bills on Louisiana were ten per cent.

W. A. W.

#### BANKS OF PENNSYLVANIA.

Comparative Statement of the Liabilities and Resources of the Banks of Pennsylvania, for November 1848, 1849, 1850, 1852, and 1855.

For tabular statements of the condition of the Banks of Pennsylvania in 1847 and other years, the reader is referred to the second volume, Now Series, May Number, p. 858; and those of the year 1853 may be found in the third volume, (April Number, 1854,) pp. 808, 805. Compared with 1849, the Capital has increased \$3,550,000; Loans, \$17,900,000; Circulation, \$5,490,000; Individual deposits, \$8,900,000; while the specie reserve is less than it was in 1847, 1848, 1850, or 1852.

Missouri.—The Legislature of Missouri at its session in 1854-5, passed an act allowing ten per cent interest per annum by special contract. This act to take effect from January 1, 1856.

Savings Bank.—The State Savings Institution at St. Louis was chartered in December last, and is in good hands. The Company will make collections and remit promptly for such. See their card on the cover of this work. R. M. Hening, Esq., President; Isaac Rosenfeld, Jr., Esq., Cashier.

#### THE EXECUTIVE DEPARTMENTS OF THE GOVERN-MENT OF THE UNITED STATES.

From the Washington Union.

#### DEPARTMENT OF STATE.

THE whole machinery employed to conduct the business arising out of our foreign relations with all the powers of the world is far more simple than is generally conceived. The number employed in the Department of State of the United States is only seventeen, as follows: one Secretary of State, (Hon. William L. Marcy,) one Assistant Secretary of State, (William Hunter,) one chief clerk, twelve clerks, one translator, and one librarian.

Diplomatic Branch.—This branch of the State Department has charge of all correspondence between the department and other diplomatic agents of the United States abroad, and those of foreign powers accredited to this government. In it all diplomatic instructions sent from the department, and communications to commissioners under treaties of boundaries, etc., are prepared, copied, and recorded; and all of like character received are registered and filed, their contents being first entered in an analytic table or index.

Consular Branch.—This branch has charge of the correspondence, etc., between the department and the consuls and commercial agents of the United States. In it instructions to those officers, and answers to their dispatches and to letters from other persons asking for consular agency, or relating to consular affairs, are prepared and recorded.

The Disbursing Agent.—He has charge of all correspondence and other matters connected with accounts relating to any fund with the disbursement of which the department is charged.

The Translator.—His duties are to furnish such translations as the department may require. He also records the commissions of consuls and vice consuls, when not in English, upon which exequaturs are issued.

Clerk of Appointments and Commissions.—He makes out and records commissions, letters of appointment, and nominations to the Senate; makes out and records exequaturs, and records, when in English, the commissions on which they are issued. Has charge of the library.

Clerk of the Rolls and Archives.—He takes charge of the rolls, or enrolled acts and resolutions of Congress, as they are received at the department from the President; prepares the authenticated copies thereof which are called for; prepares for, and superintends their publication, and that of treaties, in the newspaper and in book form; attends to their distribution throughout the United States, and that of all documents and publications in regard to which this duty is assigned to the department; writing and answering all letters connected therewith. Has charge of all Indian treaties, and business relating thereto.

Clerk of Authentications and Copyrights.—He has charge of the seals of the United States and of the department, and prepares and attaches certificates to papers presented for authentication; receives and accounts for the fees. Has charge of publications transmitted to the department under the laws relating to copyrights; records and indexes their titles; records all letters from the department, other than the diplomatic and consular.

Clerk of Pardons and Passports.—He prepares and records pardons and remissions; and registers and files the petitions and papers on which they are founded. Makes out and records passports; keeps a daily register of all letters, other than diplomatic and consular, received, and of the disposition made of them; prepares letters relating

to this business.

#### Attorney-General's Office.

Hon. Caleb Cushing, Attorney-General of the United States; R. H. Gillet, Esq., Chief-Clerk. The ordinary business of this office may be classified under the following heads:

1. Official opinions on the current business of the government, as called for by the President, by any head of department, or by the

Solicitor of the Treasury.

- 2. Examination of the titles of all land purchased, as the sites of arsenals, custom-houses, light-houses, and all other public works of the United States.
- 3. Applications for pardons in all cases of conviction in the courts of the United States.
- 4. Applications for appointment in all the judicial and legal business of the government.
- 5. The conduct and argument of all suits in the Supreme Court of the United States, in which the government is concerned.
- 6. The supervision of all other suits arising in any of the departments when referred by the head thereof to the Attorney-General.

To these ordinary heads of the business of the office are added at the present time the following, namely:

First. The direction of all appeals on land-claims in California. Second. The codification and revision of the laws of the District of Columbia.

#### INTERIOR DEPARTMENT.

Secretary of the Interior Department, Hon. Robert McClelland, of the State of Michigan. Its clerical force consists of one chief clerk, (George C. Whiting, Esq.,) one disbursing agent, and ten other regular clerks; and to its supervision and management are committed the following branches of the public service:

1st. The Public Lands.—The chief of this bureau is called the "Commissioner of the General Land Office." The Land Bureau is charged with the survey, management, and sale of the public domain, and the issuing of titles therefor, whether derived from confirmations of grants made by former governments, by sales, donations of grants for schools, military bounties, or public improvements, and likewise

the revision of Virginia military bounty land-claims, and the issuing of scrip in lieu thereof. The Land Office also audits its own accounts. The present Commissioner is Hon. T. H. Hendricks, of Indiana. Its principal officers are a recorder, chief or principal clerk of public lands, principal clerk of private land-claims, and principal clerk of surveys—all of whom are appointed by the President and confirmed by the Senate—besides a draughtsman, assistant draughtsman, and some 106 clerks of various grades.

2d. Pensions.—The present head of this bureau is the Hon. Josiah Minot, of New-Hampshire. The Commissioner is charged with the examination and adjudication of all claims arising under the various and numerous laws passed by Congress granting bounty land or pensions for military or naval services in the revolutionary and subsequent wars in which the United States have been engaged. He has one chief clerk, (S. Cole, Esq.,) and a permanent corps consisting of some seventy other clerks, to which Congress, to enable him to meet the extraordinary requirements of the new bounty-land law, has added a temporary force of about fifty clerkships of different denominations.

3d. Indians.—Commissioner of Indian Affairs, Hon. George W. Manypenny, of Ohio. He is provided with a chief clerk and about

fifteen other subordinate clerks.

4th. Patent Office.—To this bureau is committed the execution and performance of all "acts and things touching and respecting the granting and issuing of patents for new and useful discoveries, inventions, and improvements;" the collection of statistics relating to agriculture; the collection and distribution of seeds, plants, and cuttings. It has a chief clerk—who is by law (as at the present time) the Acting Commissioner of Patents in the absence of the Commissioner—ten principal and ten assistant examiners of patents, besides some dozen other

subordinate permanent clerks.

Besides these four principal branches of this new executive department, the organic act of 1849 transferred to it from the Treasury Department the supervision of the accounts of the United States marshals and attorneys, and the clerks of the United States courts; the management of the lead and other mines of the United States, and the affairs of the penitentiary of the United States in the District of Columbia; and from the State Department the duty of taking and returning the censuses of the United States, and of supervising and directing the acts of the Commissioner of Public Buildings. By recent acts of Congress, also, the hospital for the insane of the army and navy and of the District of Columbia, is under the management of this department; and by assignment from the President, it has added to its long list of duties the survey and demarcation of the unsettled boundary-lines between the States and Territories and bordering nations.

This department is at present very inconveniently separated and located, and should be appropriately and permanently provided for. The Secretary's office occupies a portion of the new Patent Office building, the General Land Office a portion of the Treasury building, and the Pension Office a portion of "Winder's building," now the

property of the government, whilst the Indian Office is located in premises not fire-proof, and rented of their private owners.

#### TREASURY DEPARTMENT.

The Treasury Department consists of the offices of the Secretary of the Treasury, two comptrollers, commissioner of the customs, six auditors, treasurer, register, solicitor, lighthouse board, and coast survey.

The following is a brief indication of the duties of these several

offices and of the force employed therein respectively:

Secretary's Office.—Hon. James Guthrie, Secretary of the Treasury; Hon. P. G. Washington, Assistant Secretary; one engineer in charge; one architect, and three draughtsmen temporarily employed, and twenty-three clerks. The Secretary of the Treasury is charged with the general supervision of the fiscal transactions of the government, and of the execution of the laws concerning the commerce and navigation of the United States. He superintends the survey of the coast, the light-house establishment, the marine hospitals of the United States, and the construction of certain public buildings for custom-houses and other purposes.

First Comptroller's Office.—Elisha Whittlesey, Esq., Comptroller, and fifteen clerks. He prescribes the mode of keeping and rendering accounts for the civil and diplomatic service as well as the public

lands, and revises and certifies the balances arising thereon.

Second Comptroller's Office.—John M. Brodhead, Esq., Comptroller, and seventeen clerks. He prescribes the mode of keeping and rendering the accounts of the army, navy, and Indian departments of the public service, and revises and certifies the balances arising thereon.

Office of Commissioner of the Customs.—Hugh J. Anderson, Esq., Commissioner, and eleven clerks. He prescribes the mode of keeping and rendering the accounts of the customs, revenue, and disbursements, and for the building and repairing custom-houses, etc., and revises and certifies the balances arising thereon.

First Auditor's Office.—Thomas L. Smith, Esq., First Auditor, and nineteen clerks. He receives and adjusts the accounts of the customs, revenue, and disbursements, appropriations and expenditures on account of the civil list and under private acts of Congress, and reports the balances to the Commissioner of the Customs and the First Comptroller, respectively, for their decision thereon.

Second Auditor's Office.—Philip Clayton, Esq., Second Auditor, and twenty-one clerks. He receives and adjusts all accounts relating to the pay, clothing, and recruiting of the army, as well as armories, arsenals, and ordnance, and all accounts relating to the Indian department, and records the balances to the Second Comptroller for his decision thereon.

Third Auditor's Office.—Robert J. Atkinson, Esq., Third Auditor, and seventy-eight clerks. He receives and adjusts all accounts for subsistence of the army, fortifications, military academy, military

roads, and the Quarter-master's department, as well as for pensions, claims arising from military services previous to 1816, and for horses and other property lost in the military service, under various acts of Congress, and reports the balances to the Second Comptroller for his decision thereon.

Fourth Auditor's Office.—Aaron O. Dayton, Esq., Fourth Auditor, and sixteen clerks. He receives and adjusts all accounts for the service of the Navy Department, and reports the balances to the Second Comptroller for his decision thereon.

Fifth Auditor's Office.—Murray McConnel, Esq., Fifth Auditor, and six clerks. He receives and adjusts all accounts for diplomatic and similar services performed under the direction of the State Department, and reports the balances to the First Comptroller for his decision thereon.

Sixth Auditor's Office.—William F. Phillips, Esq., Sixth Auditor, and one hundred and one clerks. He receives and adjusts all accounts arising from the service of the Post-Office Department. His decisions are final, unless an appeal be taken in twelve months to the First Comptroller; and he superintends the collection of all debts due the Post-Office Department.

Treasurer's Office.—Samuel Casey, Esq., Treasurer, and thirteen clerks. He receives and keeps the moneys of the United States in his own office, and that of the depositories created by the act of the 6th of August, 1846, and pays out the same upon warrants drawn by the Secretary of the Treasury, countersigned by the First Comptroller, and upon warrants drawn by the Postmaster-General, and countersigned by the Sixth Auditor, and recorded by the Register. He also holds public moneys advanced by warrant to disbursing officers, and pays out the same upon their checks.

Register's Office.—Finley Bigger, Register, and twenty-nine clerks. He keeps the accounts of public receipts and expenditures; receives the returns and makes out of the official statement of commerce and navigation of the United States; and receives from the First Comptroller and Commissioner of Customs all accounts and vouchers decided by them, and is charged by law with their safe-keeping.

Solicitor's Office.—Francis B. Streeter, Solicitor, and six clerks. He superintends all civil suits commenced by the United States, and instructs the United States attorneys, marshals, and clerks in all matters relating to them and their results. He receives returns from each term of the United States courts, showing the progress and condition of such suits; has charge of all lands and other property assigned to the United States in payment of debts, and has power to sell and dispose of the same for the benefit of the United States.

Light-House Board.—Hon. James Guthrie, President; Com. W. B. Shubrick, United States Navy, Chairman; Gen. J. G. Totten, United States Army; Col. James Kearney, United States Army; Prof. A. D. Bache, Superintendent of Coast Survey; Prof. Joseph Henry, Secretary of Smithsonian Institution; Commander S. F. Dupont, United States Navy; Lieut. Thornton A. Jenkins, United States Navy, Secretary; Capt. Edmund L. F. Hardcastle, United States

Army, Secretary; and five clerks. This board directs the building and repairing of light-houses, light-vessels, buoys and beacons, contracts for supplies of oil, etc.

United States Coast Survey Office.—Professor A. D. Baché, LL.D.,

Superintendent, and Superintendent of Weights and Measures.

Captain H. W. Benham, United States Engineers, Assistant, on special service.

Captain W. R. Palmer, Topographical Engineers Assistant, in charge of the Coast Survey Office, ad interim.

A. W. Russell, chief clerk.

C. B. Snow, in charge of archives.

Professor A. G. Pendleton, United States Navy, computer of longitudes.

Lieut. W. D. Whiting, United States Navy, hydrographic officer.

Captain A. A. Gibson, United States Army.

Assistant J. E. Hilgard, in charge of computing division.

Assistant L. F. Pourtales, in charge of tidal division.

Lieut. J. C. Tidball, United States Army, in charge of drawing division.

Lieut. T. C. Clark, United States Army, in charge of engraving division.

Samuel Hein, disbursing agent. George Mathiot, electrotypist.

Joseph Saxton, Assistant to Superintendent of Weights and Measures.

#### NAVY DEPARTMENT.

The Navy Department consists of the Navy Department proper, being the office of the Secretary and of five bureaus attached thereto, namely: Bureau of Navy-yards and Docks, Bureau of Construction, Equipment, and Repair, Bureau of Provisions and Clothing, Bureau of Ordnance and Hydrography, and the Bureau of Medicine and Surgery.

The following is a statement of the duties of each of these offices

and of the force employed therein:

Secretary's Office.—Hon. James C. Dobbin, Secretary of the Navy; Charles W. Welsh, Esq., chief clerk, and eleven clerks. The Secretary of the Navy has charge of every thing connected with the naval establishment, and the execution of all laws relating thereto is intrusted to him, under the general direction of the President of the United States, who, by the constitution, is commander-in-chief of the army and navy. All instructions to commanders of squadrons and commanders of vessels, all orders of officers, commissions of officers both in the navy and marine corps, appointments of commissioned and warrant officers, orders for the enlistment and discharge of seamen, emanate from the Secretary's office. All the duties of the different bureaus are performed under the authority of the Secretary, and their orders are considered as emanating from him. The general superintendence of the marine corps forms, also, a part of the duties

of the Secretary, and all the orders of the commandant of that corps should be approved by him.

Bureau of Navy-Yards and Docks.—Commodore Joseph Smith, Chief of the bureau, four clerks, one civil engineer, and one draughtsman. All the navy-yards, docks, and wharves, buildings and machinery in navy-yards, and every thing immediately connected with them, are under the superintendence of this bureau. It is also charged with the management of the Naval Asylum.

Bureau of Construction, Equipment, and Repair.—John Lenthall, Esq., Chief of the bureau, eight clerks, and one draughtsman. The office of the Engineer-in-Chief of the Navy, Daniel B. Martin, Esq., is attached to this bureau, who is assisted by three assistant engineers. This bureau has charge of the building and repairs of all vessels of war, purchase of materials, and the providing of all vessels with their equipments, as sails, anchors, water-tanks, etc. The Engineer-in-Chief superintends the construction of all marine steam-engines for the navy, and, with the approval of the Secretary, decides upon plans for their construction.

Bureau of Provisions and Clothing.—H. Bridge, Purser United States Navy, Chief of bureau, and four clerks. All provisions for the use of the navy, and clothing, together with the making of contracts for furnishing the same, come under the charge of this bureau.

Bureau of Ordnance and Hydrography.—Commodore Chas. Morris, Chief of bureau, four clerks, and one draughtsman. This bureau has charge of all ordnance and ordnance stores, the manufacture or purchase of cannon, guns, powder, shot, shells, etc., and the equipment of vessels of war, with every thing connected therewith. It also provides them with maps, charts, chronometers, barometers, etc., together with such books as are furnished ships of war. "The United States Naval Observatory and Hydrographical Office," at Washington, and the Naval Academy at Annapolis, are also under the general superintendence of the chief of this bureau.

Bureau of Medicine and Surgery.—Dr. William Whelan, surgeon United States Navy, Chief of bureau, one passed assistant surgeon United States Navy, and two clerks. Every thing relating to medicines and medical stores, treatment of sick and wounded, and management of hospitals, comes within the superintendence of his bureau.

#### POST-OFFICE DEPARTMENT.

Hon. James Campbell, Postmaster-General. The direction and management of the Post-Office Department are assigned by the Constitution and laws to the Postmaster-General. That its business may be the more conveniently arranged and prepared for his final action, it is distributed among several bureaus, as follows: The Appointment Office, in charge of the First Assistant Postmaster-General; the Contract Office, in charge of the Second Assistant Postmaster-General; the Finance Office, in charge of the Third Assistant Postmaster-General; and the Inspection Office, in charge of the Chicf Clerk.

Appointment Office.—Horatio King, Esq., First Assistant Post-master-General, and nineteen clerks. To this office are assigned all questions which relate to the establishment and discontinuance of post-offices, changes of sites and names, appointment and removal of postmasters, and route and local agents, as, also, the giving of instructions to postmasters. Postmasters are furnished with marking and rating stamps and letter balances by this bureau, which is charged also with providing blanks and stationery for the use of the department, and with the superintendence of the several agencies established for supplying postmasters with blanks. To this bureau is likewise assigned the supervision of the ocean mail steamship lines, and of the

foreign and international postal arrangements.

Contract Office.—William H. Dundas, Esq., Second Assistant Postmaster-General, and twenty-six clerks. To this office is assigned the business of arranging the mail service of the United States, and placing the same under contract, embracing all correspondence and proceedings respecting the frequency of trips, mode of conveyance, and times of departures and arrivals on all the routes; the course of the mail between the different sections of the country, the points of mail distribution, and the regulations for the government of the domestic mail service of the United States. It prepares the advertisements for mail proposals, receives the bids, and takes charge of the annual and occasional mail lettings, and the adjustment and execution of the contracts. All applications for the establishment or alteration of mail arrangements, and the appointment of mail messengers, should be sent to this office. All claims should be submitted to it for transportation service not under contract, as the recognition of said service is first to be obtained through the Contract Office as a necessary authority for the proper credits at the Auditor's Office. From this office all postmasters at the ends of routes receive the statement of mail arrangements prescribed for the respective routes. It reports weekly to the Auditor all contracts executed, and all orders affecting accounts for mail transportation; prepares the statistical exhibits of the mail service, and the reports of the mail lettings, giving a statement of each bid; also of the contracts made, the new service originated, the curtailments ordered, and the additional allowances granted within

Finance Office.—John Marron, Esq., Third Assistant Postmaster-General, and twenty-one clerks. To this office are assigned the supervision and management of the financial business of the department, not devolved by law upon the Auditor, embracing accounts with the draft offices and other depositories of the department, the issuing of warrants and drafts in payment of balances reported by the Auditor to be due to mail contractors and other persons, the supervision of the accounts of offices under orders to deposit their quarterly balances at designated points, and the superintendence of the rendition by postmasters of their quarterly returns of postages. It has charge of the Dead-Letter Office, of the issuing of postage-stamps and stamped envelopes for the pre-payment of postage, and of the accounts con-

nected therewith.

To the Third Assistant Postmaster-General all postmasters should direct their quarterly returns of postage; those at draft offices, their letters reporting quarterly the net proceeds of their offices, and those at depositing offices, their certificates of deposit; to him should also be directed the weekly and monthly returns of the depositaries of the department, as well as all applications and receipts for postage-stamps and stamped envelopes, and for dead letters.

Inspection Office.—John Oakford, Esq., Chief Clerk, and seventeen clerks. To this office is assigned the duty of receiving and examining the registers of the arrivals and departures of the mails, certificates of the service of route agents, and reports of mail failures; of noting the delinquencies of contractors, and preparing cases thereon for the action of the Postmaster General; furnishing blanks for mail registers, and reports of mail failures; providing and sending out mail-bags and mail-locks and keys, and doing all other things which may be necessary to secure a faithful and exact performance of all mail contracts.

All cases of mail depredation, of violation of law by private expresses, or by the forging or illegal use of postage-stamps, are under the supervision of this office, and should be reported to it.

All communications respecting lost money, letters, mail depredations, or other violations of law, or mail-locks and keys, should be directed "Chief Clerk, Post-Office Department."

All registers of the arrivals and departures of the mails, certificates of the service of route agents, reports of mail failures, applications for blank registers, and reports of failures, and all complaints against contractors for irregular or imperfect service, should be directed, "Inspection Office, Post-Office Department."

#### WAR DEPARTMENT.

Hon. Jefferson Davis, Secretary of War. In the Secretary's office proper there are one chief clerk, seven subordinate clerks, two messengers, and four watchmen. The following bureaus are attached to this department:

Commanding General's Office.—This office, at the head of which is Lieutenant-General Scott, is at New-York.

Adjutant-General's Office.—Col. Samuel Cooper, Adjutant-General. Assistants: Lieut. Col. W. G. Freeman, Major George Deas, and Captain Seth Williams. Judge-Advocate, Major John F. Lee. Nine clerks and one messenger. In this office are kept all the records which refer to the parsonnel of the army, the rolls, etc. It is here where all military commissions are made out.

Quartermaster-General's Office.—Gen. Thomas S. Jesup, Quartermaster-General; Charles Thomas, Assistant Quartermaster-General; Captain M. M. Clark, District Quartermaster; Major H. C. Wayne, in charge of clothing branch; eleven clerks and one messenger.

Paymaster-General's Office.—Col. B. F. Larned, Paymaster-General; Major St. Clair Denny, District Paymaster; eight clerks and one messenger.

Commissary-General's Office.—Gen. George Gibson, Commissary-General; Assistant, Captain A. E. Shrias; six clerks and one mes-

Surgeon-General's Office. — Gen. Thomas Lawson, Surgeon-General; Assistants: Dr. R. C. Wood, and Dr. Richard H. Coolidge;

three clerks.

Engineer Office.—General Joseph G. Totten, Chief-Engineer; Assistant, Lieutenant John D. Kurtz; five clerks and one messenger.

Topographical Bureau.—Col. J. J. Abert, Colonel of the Corps:

Assistant, Lieut. M. L. Smith; four clerks and one messenger.

Ordnance Bureau.—Colonel H. R. Craig, Colonel of Ordnance; Assistant, Captain Wm. Maynadier; eight clerks and one messenger.

#### BANKING IN THE STATE OF NEW-YORK.

Annual Report of the Superintendent of the Banking Depart-MENT OF THE STATE OF NEW-YORK, ALBANY, JANUARY 1, 1856.

I. Organization of new Banks. II. Quarterly condition of the Banks. III. Banking Associations and Individual Bankers. IV. The Banking System. V. Revision of the Banking Laws. VI. The Banking Basis. VII. Securities to be deposited by Banks whose charters shall expire. VIII. Increase of capital of Banking Associations. IX. Capital Stock to be paid in. X. Banks relinguishing business. XI. Disposal of the business of Banking on death of banker. XII. Burning of Bank Notes. XIII. Destruction of plates of Banks closing business. XIV. Final distribution of the funds of insolvent Banks. XV. Incorporated Banks. XVI. Securities deposited for additional circulation. XVII. Expired incorporated Banks and their circulation.

> STATE OF NEW-YORK, BANK DEPARTMENT, ) Albany, December 31st, 1855.

To the Legislature:

The undersigned Superintendent of the Banking Department, in obedience to the requirements of the statute, makes the following

#### REPORT.

On the 30th day of September, 1855, the number of banks in this State organized under special acts and general laws, with the amount of capital of the incorporated banks and banking associations, fixed by their acts of incorporation or certificates of association filed in this department, the amount of unreturned circulation issued to banks and bankers, and of secrrities deposited for such circulation, were as follows:

| Banks.  | No.  | Capital.        | Securities.    | (    | Circulation.       |
|---|------|-----------------|----------------|------|--------------------|
| Incorporated by special laws                                | 44   | \$15,015,660.00 | \$4,600,000.00 | •••• | \$11,290,285.00    |
| Associations—circulation secured by stocks                  | . 81 | 40,183,192.00   | 9,184,054.80   | •••• | 8,744,180.00       |
| stocks and real estate                                      | 121  | 17,020,150.00   | 18,692,510.41  | •••• | 18,091,180.00      |
| Individual — circulation secured by stocks.                 | 7    |                 | 888,789.28     |      | <b>829,</b> 187.00 |
| Individual — circulation secured by stocks and real estate, | 88   |                 | 2,111,752.18   |      |                    |
| Closing business,   | 02   |                 | 268,791.69     |      | <b>256,25</b> 0.00 |

II. Reported Quarterly Condition of Banks.—The annexed tables, numbers ten and eleven, contain a summary of the reported state and condition of every incorporated bank, banking association, and individual banker, from whom reports have been received during the preceding fiscal year, at the several dates to which such reports refer. In such tables the incorporated banks and the banking associations and individual bankers having same class of securities for circulation are separately arranged. The aggregate amount of the debts and liabilities of all such banks, and also of their means and resources, as shown by their respective reports at such times, were respectively as follows:

| DEBTS | AND | LIABILITIES. |
|-------|-----|--------------|
|       |     |              |

| Items.                    | Dec. 30, 1854. | March 10, 1855. | June 2, 1855. | Sept. 29, 1855. |
|---------------------------|----------------|-----------------|---------------|-----------------|

III. BANKING ASSOCIATIONS AND INDIVIDUAL BANKERS.—Table number one, appended hereto, contains a statement in relation to the banking associations and individual bankers of this State, and exhibits the capital of each banking association, as specified in the certificate of association filed in this department, the securities deposited by each association and individual banker for the security of the circulation, and the amount of circulating notes issued to each respectively, by the Superintendent, and still outstanding on the 30th day of September, 1855.

The aggregate of the several descriptions of securities thus deposited, are as follows:

| Bonds and mor  | tgages.       |                |             |   |   | \$6,848,726.90                  |

During the last fiscal year sixteen banking associations, with an aggregate capital of \$4,995,000, have been organized, and have deposited the securities required by law, of which number eight were organized by the shareholders of expiring safety fund banks, under the provisions of chapter 313, of the Laws of 1849, and the remainder were new institutions. During the same time six individual bankers have commenced the banking business under the provisions of the general banking law, and deposited the requisite securities and received circulation thereon.

During the same period four banking associations and five individual bankers have given notice of their intention to discontinue the business of banking, and have withdrawn a portion of their securities upon the surrender of an equal amount of circulating notes.

The accompanying table, number two, contains a statement of the names of banking associations and of the banks of individual bankers, who have given notice of their discontinuance of the business of bank-

ing, together with the amount of circulating notes outstanding, and the securities or cash deposit held in trust for the redemption of the same.

Table number three contains a statement of those banks which have closed their business, have redeemed over 90 per cent of their circulation, and are publishing the two years' notice for presentation of their notes for redemption, specifying the amount of outstanding circulation, cash in deposit, date of notice and time when notice will expire, and the association or banker be entitled to withdraw the securities.

Table number four contains a statement of the names of such banking associations and individual bankers as have discontinued business, withdrawn the securities from the department, and given the requisite bonds for the redemption of their outstanding circulating notes under the provisions of ch. 319, Laws of 1841, as amended by ch. 68, of the Laws of 1851, together with the names of the principals and sureties executing such bonds, and the time when the obligation to redeem under the provisions of such bond and the statute will expire.

Table number five contains a statement of the names of broken banks whose securities have been disposed of by the Superintendent for the redemption of their circulation, the several rates at which their notes are redeemed on presentation at the Bank Department, and

when the time for such redemption will expire.

IV. The Banking System.—In reviewing the banking history of the State, it appears that prior to the passage of the restraining act in 1804, banking privileges were enjoyed and exercised by individuals and copartnerships at pleasure. During the existence of the colonial government no banking institutions whatever were incorporated. Under the State government only seven banks were incorporated prior to 1804. At that time there existed no restrictions upon the amount of circulation to be issued, and there was no provision of law to protect the public against an irredeemable and inflated paper circulation. Under the restraining act of 1804, and the several others succeeding it, an act of incorporation became essential to the exercise of banking privileges. The incorporations were placed under many wholesome restraints, but the redemption and security of the circulation was imperfectly, if at all, provided for.

In the year 1829, after the people had suffered much by several bank failures and the inability of the failing and insolvent institutions to redeem their circulating notes, an important step was taken towards the perfection of the banking system by the introduction of the principle to secure the circulation in behalf of the public. The law which was then passed, called the Safety Fund act, was more important as introducing the principle of protection than as furnishing a permanent and reliable security for the redemption of the circulation. The Safety Fund system creating a fund by annual contributions from the banks for the redemption of the notes, and discharge of the debts of failing institutions, operated well for a time in establishing the confidence of

the public, and imparting a character and appearance of safety to the circulation. This system, however, in a short time proved a failure and inadequate to the protection of the circulating notes. When a severe commercial crisis swept through the country, and banking institutions were shattered in the blast, the accumulated fund was soon wholly exhausted, and the future contributions of the remaining banks, up to the time of the expiration of nearly all their respective charters, anticipated by loans upon the credit and on account of the fund, so as to leave nothing for protection in the event of future failures and insolvency. Such deficiency and insolvency of the fund was in a great measure to be attributed to the illegal and excessive issue of circulating notes by many of the insolvent institutions beyond the limit authorized by law. Such illegal issue and its effects exhibited the necessity of something more than a mere statutory restriction against excessive issues, and the propriety of controlling the issue of circulating notes by means of, and through the agency of one of the departments of the government.

The failure and defects of the Safety Fund act led to the conception and adoption of the present banking system, having for its peculiar features the free and unlimited exercise of banking privileges by individuals and associations without the necessity of any special act of incorporation, except the issue of any circulating notes or currency, other than such as shall have been countersigned and registered by the State Superintendent, and received from him; the securing the whole amount of circulation thus issued by deposit with the Superintendent of at least an equal amount of public stocks or stocks and mortgages; and prohibiting under severe pains and penalties the Superintendent from countersigning or issuing to any banking association or individual banker circulating notes to an amount exceeding the securities in deposit. By this means, under a fair and honest administration of the system, the holders of bank notes are fully protected from loss. The banking institutions of the country, and the circulating medium provided by them, have become such essential and indispensable elements in the commercial and business transactions of the community, that the Legislature can not too rigidly and perfectly guard and provide for their security. They have therefore, with the view of having their attention annually called to the subject, and the operations and defects of the system, made it the duty of the Superintendent to report annually, and suggest any amendments to the banking laws by which the system may be improved and the security of billholders and depositors increased.

V. Revision of the Banking Laws.—In discharge of the duty devolving upon the Superintendent to suggest any amendments to, or improvements in the system, he will confine his suggestions to the particular points in which the laws appear to be defective; and recommend such amendments only as seem necessary to remedy the defect.

The present Superintendent believes that any radical change in the banking laws, or any general revision of them, is uncalled for, and would be unwise and inexpedient. The system now, as a whole,

operates admirably well, furnishes a paper currency equal to any in the world, and has answered the most sanguine expectations of its friends. At the same time that a deaf ear should not be turned to any suggestions for its improvement, it should be recollected that in all matters controlled by legislation, and especially in banking, stability is more desirable than change. The business and habits of bankers, and of those dependent upon the accommodations and facilities afforded by them, adapt themselves to the laws as they exist. A general revision would almost certainly lead to some radical changes in the system, which for a time at least would unsettle some things, which are now fully established and understood. And although the system is not in all things perfect, still it may better remain as it is than take the chances for what a revision may produce. Such views, however, should not interfere with its improvement and perfection under the teachings of experience.

VI. THE BANKING BASIS.—In the early existence of the present banking system the public lost much, and the reputation of the system suffered much by the admission of securities, as a banking basis, issued by some of the sister States in the confederacy, who, faithless to their obligations or bankrupt in their treasuries, failed in the performance of their contracts. To obviate a recurrence of the same difficulty in future, the Legislature have wisely excluded all other stocks than those of the United States and of this State. There has no bank failed in this State, having a circulation secured wholly by public stocks of this State and of the United States, the circulation of which has not been redeemed at the par value thereof, and in such manner without interruption, that the notes lost nothing of their efficiency and value in circulation until actual redemption.

On the other hand, during the existence of the system there has only been a single instance in which the circulation of a failing bank has been redeemed at par when their circulation was secured by bonds and mortgages, and not any where it was secured by the stocks of other States. In such cases, also, the failure has been invariably attended by at least a short space of time, during which redemptions were not made while awaiting the sale of the securities. The notes in the mean time, losing their value as a circulating medium, have been disposed of at a great loss by the timid and necessitous. While the stocks which are now received meet with an immediate and ready sale in the market at prices varying from par to a large premuim, on the other hand mortgages have brought on an average, at security sales, only about seventy-five per cent. This fact itself exhibits a great superiority of the stock over the real estate basis for banking circulation, and a defect in the mortgage security as at present arranged. Such defect should be provided against if practicable, for the improvement of the system. It is the more important that it should be done, because the amount of mortgages as a security for circulation is increasing in a greater ratio than stocks.

During the last fiscal year, while the amount of mortgage securities in this department have *increased* \$130,478, the stock securities have diminished \$637,742.

The defect in mortgages as a banking basis does not arise from the insufficiency of mortgages as security for the money loaned, for no safer security for an investment can be furnished than the farming lands of our State. But it arises from the fact that mortgages are not, at all times, cash securities in the market, and will not, in stringent times and when there is a pressure for money in the community, demand par at a forced sale, no matter to what extent the value of the mortgaged property may exceed the amount of the mortgage. The purchaser at such times can do better with his money than invest it at seven per cent and buy mortgages at a rate at which he can only realize the amount he advances with interest. It has therefore been found that mortgages must in all such cases be sold at a discount. This difficulty can be readily obviated by restricting the circulation to be issued upon mortgages to eighty per cent of their amount, instead of par, and permitting them to be taken upon farming lands to the extent of one half, instead of two fifths of their value, exclusive of improvements, as now provided by law. The margin thus reserved in the issue of circulation would, except in very extraordinary cases, furnish an ample guarantee that an amount sufficient to cover the circulation would be realized at a forced, or any other sale.

The greatest loss sustained upon mortgages has usually been upon those covering village and city lots. The reason of that is obvious. The value of farming lands as such is firm and stable, intrinsic and not fictitious, and furnishes an abundant security for one half its fair valuation. On the other hand, village and city lots bear more of a fictitious than intrinsic value, dependent upon the current of trade or fancy, both of which are liable to fluctuations, and so constantly fluctuating as to make the desirable property of to-day the drug of to-morrow. Such property, therefore, by reason of its fluctuating character as to price, and its value depending upon changing circumstances, does not form the safest or best basis for a mortgage security. It cannot always be relied upon, either at a security sale or mortgage foreclosure, to furnish a remunerating return for the investment. The Superintendent, therefore, recommends that the mortgage security be limited to improved and productive farming lands, and the amount of the investment controlled by their value as farming lands for farming purposes.

VII. SECURITIES TO BE DEPOSITED BY ASSOCIATIONS SUCCEEDING INCORPORATED BANES.—The Legislature, in 1849, for the benefit of the stockholders of incorporated banks whose acts of incorporation were about expiring, and to afford them an easy transition from one system of banking to the other, by chapter 313 of the laws of that year, relieved them from the immediate operation of those provisions of the general banking law which require the deposit of securities by a banking association to the amount of \$100,000, before commencing the business of banking, and authorized the Superintendent to issue circulating notes to them, in amounts not less than \$10,000, upon the deposit of securities to the amount of the circulation thus issued.

This was intended by the Legislature as a mere temporary exemption, and they evidently contemplated that such associations should

within three years deposit the \$100,000 of securities, and place themselves on a par with other banking associations. The statute, after giving the authority as above stated to the Superintendent for the issue of notes, provides that, "if such banking association, so formed, shall not have deposited with the Superintendent during the three years next following the date of their articles of association, an amount equal to that now required by law of banking associations as security for circulating notes previous to commencing the business of banking, the Superintendent is empowered to retain the interest accruing upon securities so deposited until such association has complied with the provisions of the act above recited, in relation to the amount of security to be deposited in the office of the Superintendent." Several of the banking associations thus formed, more than three years ago, by the stockholders of expiring incorporations, have neglected to comply with the intention and requirement of the Legislature, and have not deposited the required amount of securities.

The only power given the Superintendent to enforce compliance is to withhold the interest on the securities deposited, and this has been done in every instance. The penalty however is of so slight a character, simply the loss of the use of the interest for a time, without any restriction upon or interference with any other rights or privileges, that it is of no avail, and the delinquent associations prefer incurring the penalty for non-compliance with the law, to bringing themselves within its provisions. The Legislature having limited to three years the extension of such exclusive privileges to that class of banking associations, it is submitted whether some more stringent provision should not be made, so as at least to make it the interest of those associations to comply with the law, rather than to disobey and disregard it, and to make the path of obedience easier and more profitable than that of resistance. The three years' limit will expire as to ten more associations on the first day of January, 1856, some of which have, and others of them have not as yet, deposited the one hundred thousand dollars of securities.

VIII. Increase of Capital of Banking Associations.—The general banking law requires each banking association to make a certificate of association, specifying among other things the amount of the capital stock of the association, and the number of shares into which the same shall be divided. It also provides, that such certificate shall be recorded in the Country Clerk's office, and a certified copy thereof filed in the Bank Department. The law authorizes the association by its articles of association to provide for an increase of its capital, and of the number of associates, from time to time, as may be deemed proper. It authorizes an increase of capital when the articles of association thus provide for it, but it does not specifically require the record or filing of any certificate or evidence of such increase. Although many banking associations have filed in the department formal evidence of the increase of their respective capitals, still very many others have not done so, and the result is that the Bank Department does not now furnish any reliable record evidence of the actual banking capital of the State, nor of the capital of many of the banks in the

State, other than that which may be gleaned from their quarterly reports.

Eighty-four of the banking associations in the State report in the aggregate \$12,705,650 more capital than is specified in their certificates of association. From this fact arises the great discrepancy which will appear in the statement of capital in different portions of this report and the accompanying tables. There is a manifest propriety in requiring evidence to be filed in the Bank Department of any change in the articles of association, as it respects any of those items which are required to be specified in the certificate of associa-The certificate of association is recorded and filed to furnish evidence to the world of the facts contained in it. Of what value is it as evidence if the material facts it certifies may be changed the next day by the associates, without notice or change of the certificate? There is a manifest propriety, therefore, which needs no argument to elucidate, to require that whenever the capital of an association is increased, or any other change is made in the articles of association in any of the points covered by, and required to be specified in the certificate of association, there should be formal evidence of that fact on file in the department, and on record when the original certificate of association is recorded.

If the original record and filing is of any consequence, the other is not the less important, inasmuch as the authority to increase the capital depends upon provision therefor being made in the original articles of association; the original certificate of association required to be recorded and filed, should specify the extent to which the capital of the association is authorized to be increased by its articles of association.

IX. CAPITAL STOCK TO BE PAID IN.—By the act of 1838 it is provided that the aggregate amount of capital stock of any banking association shall not be less than \$100,000. This cannot be presumed to have reference to fictitious or imaginary capital, subscribed merely, but not paid in. It must clearly intend to include only that actually paid in and in a situation to be used in the business of the institution.

The act, however, itself makes no specific provisions requiring such stock, or any portion thereof, to be actually paid in before commencing the business of banking. The Legislature may, perhaps, and probably did intend to leave that to be governed by the general statute, then and still in existence, in relation to moneyed corporations (1 R. S. 595, sec. 29 and 30), which requires every moneyed corporation, before commencing the business for which it shall be incorporated, to file an affidavit with the county clerk stating that the whole of the capital stock, or such portion thereof as by its charter shall be paid or secured, before the commencing of its operations, has been actually paid or secured according to the provisions of its charter. This provision has generally been regarded as not applicable to banking associations organized under the laws of 1838; and therefore but few, if any, have felt called upon to file the affidavit under it.

The Superintendent has no power to inquire into the fact whether the capital required has been in fact paid or secured to be paid or not,

nor whether the affidavit under the aforesaid law has been filed or not, but is obliged, upon a copy of the certificate of association being properly filed, specifying a capital of \$100,000, or upwards, and securities to the amount of \$100,000 being deposited with him, to consider the association as properly organized, and to deliver circulating notes to an amount equal to the securities in deposit. Such associations are thus enabled to proceed in the issue of notes and the prosecution of the banking business, notwithstanding a very small portion in fact of their capital may have been paid in, and nearly all their securities may have been bought upon credit, or upon pledge of their

circulating notes.

This is plainly an evil which should be remedied. Under this state of things, and from the want of a specific and undoubted requirement that evidence be furnished to the Superintendent before the issue of any notes, that the capital stock has been paid in, the quarterly reports show the fact that twenty-six banking associations report in the aggregate \$1,350,629 less capital than that specified in their certificates of association recorded and filed. And it further appears that five of them, with an aggregate capital specified in their certificates of assotiation of \$550,000, report an actual capital of of only \$317,544. The actual capital of each one of them being reported at less than \$100,000, the required amount, the lowest in the list reporting an actual capital of only \$47,000, and the highest reporting one of only \$90,060. With these facts before him the Superintendent is clear in the opinion that the law should be so amended as to require the certificate of association in every case to specify the amount of actual capital required to be paid in before commencing the business of banking, and that such amount should not, in any case, be less than \$100,000, and that the Superintendent be prohibited from issuing any circulating notes to such association, until furnished with proper evidence by affidavit of the president and cashier of such association, that the capital stock required to be paid in by such certificates has in fact been paid.

X. As to Banks relinquishing Business, and Bond on Surren-DER OF SECURITIES.—Provision is made by chapter 319 of the Laws of 1841 for the relinquishment of the banking business by individual bankers and banking associations, and after a certain time for the withdrawal of the securities deposited with the Superintendent. Such law was amended by chapter 68 of the Laws of 1851, and a further provision made requiring a bond to be given for the redemption of the outstanding circulating notes upon the surrender of all the securities and cash deposits. The law requires that before the securities shall be surrendered after the publication of the two years' notice to present notes for redemption, a bond shall be given satisfactory to the Superintendent, with three or more sureties, conditioned for the prompt redemption whenever presented within six years from its date of all outstanding notes of such association or individual banker. The law does not specify to whom the bond shall be executed, nor by whom, in case of a breach, the same shall be prosecuted. Those

which have been taken hitherto have all been executed to the Superintendent, which has been deemed to be proper in the absence of any legislative direction. Such execution of the bond probably renders it necessary that the Superintendent should be the party to sue, although he has no interest in the recovery and does not hold or own any notes which have been refused payment.

It appears to the Superintendent that the law would be much improved and the billholders better protected by declaring that such bond shall be executed to the Superintendent, and held by him for the benefit of the billholders, and authorizing any person holding and owning any unredeemed circulating note or notes of such association or banker, the payment of which shall have been refused or neglected on presentation, at the place of business or residence of the principals in such bond or one of them, during the usual business hours, if he resides or has a place of business in this State, or if he has not, at the residence or place of business of one of the sureties of such bond, to prosecute such bond for his own benefit and in his own name, in the supreme or in any county court of this State, and recover judgment for the amount of such bill or bills with interest from the time of such presentation, neglect, or refusal, with costs, and that the recovery of one suit upon such bond shall not be a bar to a prosecution and recovery for any other breach of the condition thereof; at the same time prohibiting the commencement and prosecution of more than one suit to recover the amount of all the notes held and owned by the plaintiff at the commencement of the prosecution. The Superintendent respectfully suggests that some such additional provision as the one suggested, is necessary to carry out the intention of the Legislature, and furnish an adequate remedy to the billholders.

It is believed that the amount of circulating notes remaining unredeemed and in circulation after the expiration of the time limited for their presentation is, in many instances, larger than it otherwise would be by reason of the banker, through himself or his agents, using the bills for circulation after having given the notice of his intention to discontinue business, instead of returning them to this department for destruction. The banker and the officers of the banking association, their agents and assigns, should, after the notice to discontinue the banking business has been given, be required to carry out the same in good faith, and for that purpose should be prohibited, by means of a sufficient penalty, from circulating or having any agency in circulating, either directly or indirectly, or continuing in circulation the circulating notes of the banker or association intending to close the banking business. They should not be permitted to withdraw from a legitimate banking business and its obligations, and retain the con-

tinued use and benefit of the circulation.

Unless it is occasioned by the continued use of the circulation and its reissue by the bankers and redeeming agents, there can be no plausible reason furnished why, in some cases, \$6000 and upwards of the circulating notes of an ephemeral institution, having discontinued business, are still outstanding unredeemed, after the expiration of the two years' notice for redemption, while in other cases of banks

closing business the outstanding circulation scarcely exceeds so many hundred dollars.

XI. DISPOSAL OF THE BUSINESS OF BANKING ON DEATH OF BANK-ER.—Individual bankers are prohibited by chapter 242 of the Laws of 1854, from selling or transferring the business of banking to any person or persons, and by such statute it is expressly declared that until such business shall be closed by the return of the circulating notes issued and the delivery of the securities deposited, the same shall be conducted only in the name of the individual banker by whom the securities were deposited. This provision of law is a wise one, and was enacted to prevent abuses and frauds which were continually practised through fictitious and dishonest transfers, to the great injury of the community. It goes farther, however, than was necessary to correct the evil intended to be remedied. Under this law, when the banker dies, his banking business falls with him and cannot be continued by any devisee or heir, but must be closed by his representatives or surviving partner. There can be no good reason why, after a banker has established a bank and a banking business in any particular locality, there should not be some provision of law by virtue of which it may be bequeathed by him to some relative or friend for the continuance of the business. The sudden stoppage and closing up of a well-established bank, by the death of the banker, must necessarily in most instances be attended with great injury and inconvenience to the business and commercial transactions of the community within which it is located, in addition to the loss and injury inflicted thereby upon the family of the deceased. All this can be entirely obviated by making some provision authorizing its continuance in case of the death of the banker, by his devisee or heir at law. The power of bequest, in such case, is not one which will or can be abused to any extent; nor does it appear that there can be any reasonable objection to its allowance. It is therefore recommended that the law be so modified, as to permit an individual banker to bequeath by will his banking business, and his rights and privileges as a banker, to such relative or friend as he may deem proper, with full power to continue and prosecute the same after his death, retaining and continuing however in behalf of the creditors of such banker the liability of the estate of the deceased, for the extinguishment and satisfaction of the debts and obligations of the deceased, incurred in the prosecution of his banking business, upon the neglect or failure of the legatee to provide for the same.

XII. BURNING OF NOTES RETURNED TO THE BANK DEPARTMENT.— The number of mutilated notes returned to the bank department for burning during the last fiscal year was as follows:

| Unregistered notes,                                    | \$7,388   |
|--|-----------|
| 915,506 Bills of incorporated banks, amounting to -    | 5,003,106 |
| 1,932,178 Bills of banking associations and individual |           |
| bankers, amounting to                                  | 6,340,761 |

Amounting in the whole to - - - - \$11,351,255

This is an important part of the duties to be discharged in the department, and should be carefully watched, guarded, and so arranged as to prevent, as effectually as practicable, any danger of fraud, collusion or the possibility of its existence. The Superintendent as a public officer is entitled to such provisions of law as will fully protect him against any unjust suspicion or danger of fraud. To accomplish that end, although not expressly required by law, he has heretofore, and does now assume upon himself, the right to require each bank to have an agent of its own selection present to witness the counting and destruction of the bills at the department, and sign a certificate thereof in a book provided for the purpose. Those certificates are the evidence in the hands of the Superintendent that his duty has been properly discharged. The attendance of such agent is also necessary by reason of the errors which are frequently detected in the count and marking by the officers of the bank of the amount contained in the packages sent to be destroyed. When such discrepancy in the count exists the matter cannot ordinarily be made satisfactory in the absence of the bank agent and after the packages have been broken open and counting progressed without his attendance, and unjust suspicion upon the clerks of the Department might be the consequence. The attention of the Legislature is now called to the subject inasmuch as some bankers have, at times, shown a disposition to question the right of the Superintendent to make such requirement, and the trustees of the Bank of Monroe, an expired safety fund bank, have returned four several packages marked as containing, in the aggregate, \$115,144 of the circulating notes of said bank to be burned without complying with the repeated request of the Superintendent, and wholly neglecting to appoint an agent or authorize any person to appear in their behalf to witness the counting and burning. Those packages are still lying unopened in the vault awaiting the attendance of a trustee or agent.

The Superintendent asks that such salutary requirement may receive the sanction and authority of law, and that in case any bills are received by the Superintendent for destruction, and the individual banker or the trustees or officers of any bank to whom the same may belong shall neglect or refuse to procure the attendance of some person in their behalf, to witness and certify such counting and burning within ten days after the receipt of the bills at the bank department, that the Superintendent be empowered to select or appoint some indifferent party at the expense of the bank, banker or trustees, as the case may be, who shall, for them in their behalf, and as their duly authorized agent, witness and certify such counting and destruction.

XIII. DESTRUCTION OF PLATES OF BANKS CLOSING BUSINESS OR BROKEN.—On the fourth day of March, 1852, a concurrent resolution was adopted by the Legislature, authorizing and directing the destruction by the Superintendent, of the bank note plates of broken banks and banks closing business. This is a power which should be vested in the Superintendent, and is an important one to be exercised. But it is respectfully submitted that it is not a power which can be constitutionally conferred by joint resolution. The constitution of this

State, by section 14 of article 3, declares expressly that "no law shall be enacted except by bill." This provision clearly deprives the Legislature of the right to confer any such authority or direction as contained in the resolution of March, 1852, in any other way than by bill. It is suggested, therefore, that the power sought to be conferred by that joint resolution be constitutionally provided for by a formal act of the Legislature. There are now in the department the plates of several banks which are in process of closing their business, and the destruction of their plates is awaiting the action of the Legislature and the proper authority to destroy the same.

The present Superintendent does not feel authorized to act in the

matter without the direct authority of law.

XIV. Final Distribution of Funds of Insolvent Banks.—Chapter 331 of the Laws of 1850 provides for the final distribution of the funds of insolvent banks, and requires six years and six mouths to elapse before a final distribution can be made of the funds arising from the sale of the securities deposited with the Superintendent for the redemption of the circulation. This appears to be a much longer time than necessary to close the affairs of the bank, and withhold from the billholders their final dividend. The circulation can as well be brought in within three as six years, and it is therefore respectfully recommended that the Superintendent be authorized, at the expiration of three instead of six years after the first sale of securities, to publish the six months' notice of final distribution, and after such time make a final dividend.

XV. Incorporated Banks.—The annexed table specifies the banks of this State incorporated by special act, whose charters have not expired, the capital of each, the amount of circulation authorized by law, and the circulating notes each bank had on hand and in circulation on the 30th day of September, 1855, and the time when their charters will respectively expire.

Names of Incorporated Banks, with a statement of their capital, amount authorized to circulate, amount of circulation, and time when charters expire.

XVI. SECURITIES DEPOSITED FOR ADDITIONAL CIRCULATION.—By the provisions of the act, chapter 97, of the Laws of 1849, the Safety Fund banks are authorized, under certain restrictions and upon the deposit of the requisite security, to receive from the Superintendent of the Banking Department, registered, in the place of unregistered notes not returned to the Bank Department, but supposed to be lost or destroyed.

By virtue of such act, the Seneca County Bank has deposited \$3000 New-York State 6 per cent stock, and received circulation thereon; and the bank of Orange County has deposited \$20,000 New-York State 6 per cent stock, and received circulation thereon.

Under the provisions of the act, chapter 344, of the Laws of 1848, the several Safety Fund banks having capitals of over \$200,000 were

respectively authorized, upon the deposit of proper securities, to issue additional circulation beyond the amount authorized by the Laws of 1837, up to the amount of their respective capitals. By virtue of such act, the Cayuga County Bank has deposited New-York State 6 per cent stock to the amount of \$21,000, and circulation has been issued thereon. That the Bank of Geneva, now one of the expired Safety Fund banks, before the expiration of its charter, under the provisions of said Law of 1848, deposited with the Superintendent in trust the sum of \$3000 in New-York State 6 per cent stock, and received a corresponding amount of increased circulation thereon.

standing of that circulation . . . . . . . . . 5,431,386.00

Such outstanding circulation is used by the associations formed by the stockholders of Safety Fund banks to succeed the expired Safety Fund banks respectively, and the association is thus relieved to that extent from procuring other registered circulation by the deposit of securities in this Department. There is no direct legal obligation on the part of the new banking association to redeem such bills unless it is under the contract of sale existing between the new association and the trustees of the expired corporation, and that obligation must necessarily be worked out through the intervention of such trustees. The notes being thus continued in circulation by the new banking association for its own immediate benefit, after the expiration of the charter of the bank by which they were issued, it would be right that such association should be made directly and immediately responsible for their redemption, and the personal liability of its stockholders under the provisions of the constitution be made to attach therefor. The advantage gained by the stockholders of the new association is more than a compensation for the risk encountered by its guaranty, and they should not be allowed thus to use and issue that for their own immediate benefit which they will not thus guarantee.

The associations using such circulation should be required, in their quarterly reports, to state the amounts of such notes in circulation and held by them; otherwise their reports do not exhibit the true amount of the circulation issued and used by them.

The statute, chapter 138, of the Laws of 1854, has prescribed a limit of three years, within which the outstanding circulation of an expired

Safety Fund bank must be returned to the Bank Department to be destroyed, one third in each year.

On the 1st day of May last, the first year provided in the act expired as to all the Safety Fund banks, whose charters had terminated before the passage of the act. At that time the provisions of the act were fully complied with by the trustees of such institutions. As to the banks whose charters have expired since the passage of the act, the first year will terminate as to five of them on the 1st of January, 1856, two in the month of June, 1856, and two on the 1st of July, 1856.

This law wisely creates a limit to the use of the currency, and thereby to a certain extent, at least, impliedly, if not directly, sanctions its use. This fact can not lessen, but rather increases the obligation of the association using such circulation for its own purposes, to secure it as suggested above.

### IL BANK FUND.

The Superintendent of the Banking Department is required by law to report to the Legislature from time to time the condition of the Bank Fund, and in discharge of such duty he makes the following statement:

| Receipts during the year.  |  |              |
|--|--|--------------|
| Contributions by the banks,  | 105.00   | 81,873:63    |
|  |  |              |
| Payments during the year.  |  | \$144,164.51 |
| Interest on stock, Redemption of stock, bills, Contingent expenses,  | \$25,880.22<br>2,000.00<br>34.00<br>147.45           | 28,061.67    |
| Balance of money in treasury Sept. 30, 1855,   | ••••••   | \$116,102.84 |
| There is due to the fund unpaid contributions from the followhose charters respectively expired at the dates specibesides interest:  | wing banks,<br>fled below,                           |              |
| Bank of Utica and branch, Utica, Dec. 31, 1849,  Bank of Monroe, Rochester, Dec. 31, 1849,  New-York State Bank, Albany, Dec. 31, 1850,  City Bank of New-York, New-York, July 1, 1852,  Greenwich Bank, New-York, June 4, 1855,  Livingston County Bank, July 1, 1855,  Bank of Lansingburgh, | 1,500.00<br>1,848.00<br>1,800.00<br>427.77<br>250.00 | 1            |
|  |  |              |
| Due on bonds and mortgages,  |  |              |

Since the commencement of the fiscal year, the Trustees of the Greenwich and Livingston County Banks have paid the amount thus stated to be due from those institutions.

There is also belonging to the fund the balance of the assets of the City Bank of Buffalo remaining unsold and supposed to be unavailable, and which assets were assigned to the Bank Fund by the receiver of the City Bank in the years 1846 and 1847, in pursuance of two several orders made by the Chancellor of this State, one dated February 11, 1846, and the other dated May 7, 1847. Such assets consisted of judgments, mortgages and other claims to a large amount against various parties, which, at the sale of the assets of the City Bank, were bid in by the receiver. Under the orders of the Chancellor aforesaid they were transferred to the Comptroller and credited to the Bank Fund at the amounts at which they are respectively bid in by the receiver. A sufficient amount of the assets have been collected to reduce the amount of the cost thereof to the Bank Fund to the sum of \$25,623.32, although the nominal amount of such assets is much larger.

The remaining unsold and unsettled assets consist of judgments recovered against various parties, and twenty years has nearly elapsed since the recovery of some of them. It is supposed that if they were in the hands of an individual something might be realized out of them, but in the hands of a public officer, whose time is fully engrossed with his other and more special duties, they are wholly uncollectable. It is, therefore, suggested that the Legislature confer upon the Superintendent power to compromise all or any of said debts, and to sell and dispose of the whole or any portion of them at public or private sale,

as he may deem most for the interest of the fund.

In relation to the amount stated as due from banks for unpaid contributions, a suit is now pending, and has been for several years, to enforce the recovery of the amount due from the trustees of the Bank of Utica. It is hoped that it will speedily be brought to a favorable termination. As the Superintendent does not entertain any doubt as to the liability of the banks to make the contributions as charged, he will feel it to be his duty to institute suits also against the other defaulting institutions, unless the amount due is speedily arranged. As to the last named banks, whose charters expired in June and July last, the contribution unpaid being for the fractional part of the year, those banks may not technically be bound to pay until the 31st December, 1855, and, therefore, cannot be considered in default unless it remains unpaid after that date. That portion of the fund consisting of such unpaid contributions is considered good and collectable, but not immediately available.

In relation to the bonds and mortgages thus forming a part of the fund, it is doubtful whether they can be made available for the full amount due. The present Superintendent has instituted proceedings for the foreclosure and collection of such of them as are considered the most doubtful, with a reasonable prospect that a considerable portion

of the amount due thereon will be realized.

BANK FUND STOCK.—The Bank Fund, some time after its creation, proved wholly insufficient to meet the demands upon it for the payment of the debts of insolvent corporations entitled to be discharged thereout. To meet the deficiency, loans were made anticipating and pledging for their satisfaction the future contributions to the fund. Some of the stock created in making such loans has been paid off and cancelled; the balance outstanding, and the time when the same is redeemable, is as follows:

| Rodeemable,      |             | Redeemable,   |              |
|------------------|-------------|---------------|--------------|
| Feb. 1, 1856,    | \$83,550.00 | Feb. 1, 1861, | \$100,047.35 |
| " 185 <b>8</b> , |             | " 1866,       |              |
| " 1859,          | 55,822.82   | ·             |              |
| ·                | •           | Total,        | \$424,961.30 |
|                  |             | •             | •            |

For the payment of this debt, together with the interest accruing thereon, the means on hand above specified, and the contributions required to be paid annually to the fund by the Safety Fund banks, are pledged.

The amount of the several annual contributions, payable until the expiration of all the charters under the Safety Fund act, are as follows:

| \$63,828.30 | 1861, Dec. 31                       | l  | \$42,778.30       |
|-------------|-------------------------------------|--|-------------------|
|             |                                     |  |                   |
|             |                                     |  |                   |
|             | 1864. "                             |  | 20,750.00         |
|             |                                     |  |                   |
|             |                                     |  | \$452,948.10      |
|             | 60,728.30<br>47,528.30<br>46,528.30 | 60,728.30 1862, "<br>47,528.30 1863, "<br>46,528.30 1864, "<br>45,028.30 1865, " | 47,528.30 1863, " |

The accompanying statement, marked schedule No. 8, has been prepared to exhibit the ability of the Bank Fund with future contributions to meet the existing liabilities charged upon it.

In this statement the available means on hand on the first day of October last, is taken at the aggregate amount of the money in the treasury and the bonds and mortgages. It is believed that that is a perfectly safe basis for calculation, and that it will fall short of the amount which will be in fact realized. From such statement it appears that the Bank Fund will be sufficient to meet all the charges upon it until the 1st day of February, 1861, when there will be a deficiency of about \$18,000. And that in 1863 there will be a sufficient amount in hand, after meeting the deficiency of 1861, to extinguish the balance of the existing debt and have a surplus in the treasury of \$13,869, to be increased by the contributions for the years 1863, 1864, and 1865, then still to become due.

Upon referring to the statement above mentioned, it will be perceived that after the payment of the Bank Fund stock due on the 1st day of February next, and after the receipt of the contributions from the banks due the 31st day of December, 1855, there will be a balance on hand of \$97,287, without any stock maturing until the 1st day of February, 1858. On the 1st day of February, 1857, the balance on

hand, after the payment of the interest then due, will be increased to \$140,936.

Under such circumstances the Superintendent should be authorized to invest any moneys in the treasury belonging to the Bank Fund after the 1st day of February, 1856, in the purchase of Bank Fund stock coming due not later than the year 1858, on such terms and at such times as he may deem for the interest of said fund and the funds in the treasury will warrant, provided that such stock shall not be purchased at a price exceeding the par value thereof. It is recommended that the necessary appropriation should be made therefor. A compliance with this suggestion is mainly important by reason of the large saving of interest which will thereby accrue to the fund.

At the same time that the present Superintendent makes the above recommendation to anticipate the payment of the stock due in 1858, he can not concur with his predecessor in the recommendations con tained in the annual reports for the years 1853 and 1854, to extend such authority to redeem the stock due in the year 1859. All the contributions to become due and payable on the 31st day of December, 1856, and a large portion of those to become due and payable on the 31st day of December, 1857, will be absorbed by the stock maturing in February, 1858, and therefore an investment earlier than February, 1858, in the stock of 1859, will create a deficiency in the fund to meet the stock maturing in 1858.

The Bank Fund therefore could not with propriety, nor in justice to those holding the stock due in 1858, be used in payment of the stock due in 1859, until after the full redemption of the stock due in 1858. Two years will therefore expire before any portion of the stock due in 1859 can with justice be paid, and inasmuch as under the constitution an appropriation act becomes obsolete within two years after its passage, it can be of no avail now to pass such law for the redemption of the stock due in 1859.

### III. TRUST COMPANIES.

Under the acts of incorporation of the Buffalo Trust Company of the city of Buffalo, and the United States Trust Company of the city of New-York, they were respectively required to deposit securities to the amount of \$100,000 with the Superintendent of the Banking Department before commencing business.

Under such law securities have been deposited by such companies with the Superintendent, and are now held in trust for them, as follows:

| Buffalo Trust Company, Buffalo: Bonds and mortgages, \$97,000 Buffalo city stock, 7 per cent, 3,000 |                      |
|---|----------------------|
|   | \$100,000<br>100,000 |
|   | \$200,000            |

### IV. CLERKS AND EXPENSES.

The whole amount of expenses of the department during the fiscal year ending with the 30th day of September last, together with the amount for which the treasury was on that day in advance, appears by the following statement, to wit:

## Expenses. The State treasury was in advance at the commencement of the fiscal year, October

| The Superintendent has drawn from the treasury from that date to October 1, 1855: | \$14,100.34 |
|---|-------------|
| Chargeable to free banks.   |             |
| For salaries,   | 16,232.88   |
| Chargeable to incorporated banks.   | •           |
| For salaries, \$3,337.50 miscellaneous, 1,000.37                                  | 4,337.87    |
| •   | \$34,726,09 |

From free banks, \$16,543.09 incorporated banks, 4,057.30

20,600.39

\$14,125.70

Drafts for which will be made on the several banks, associations, and bankers, immediately after the 1st day of January, 1856.

On comparing the preceding statement with the Treasurer's account,

a discrepancy of \$400 will appear between the two.

That arises from the fact of the Superintendent not having given credit to the treasury for the sum of \$400, which the Comptroller, by the supply bill passed at the last session of the Legislature, was directed to pay to one of the clerks employed in this department for extra services alleged to have been rendered by him in the years 1852, 1853, and 1854. The same was not paid upon the certificate or order of the Superintendent, nor does the act contain any authority or direction to the Superintendent to apportion the same among the banks. Under the law as it exists the Superintendent has no power to apportion the amount of such extra allowance paid, among the several banks. This was an extra allowance granted to one of the registers for incorporated banks, and such services are directed by the general law to be charged to the banks respectively, for which the services were specially rendered. Many of the banks for which notes were registered during those years have gone out of existence by the expiration of their charters, and it is impossible now to tell what the extra services were, or for what banks they were rendered, and consequently the Superintendent has no means of knowing how to make the apportionment in the manner required by law. He, therefore, has no other alternative than to consider it a gratuity paid by the Legislature without any intention to require the same to be refunded by the banks.

Conclusion.—The Superintendent has now, he believes, furnished, in the preceding report, all the information to the Legislature which he is required to do at the commencement of their annual session. He has also called their attention to such amendments of the laws as will, in his opinion, tend to improve the operation and success of the

banking system.

Having done this, he conceives that his duty, in respect thereto, has been fully discharged, and it now remains for the Legislature to judge of the propriety of the suggestions, and to take such action thereon as in their wisdom they shall deem proper. He can not close this report, however, without commending, in the highest terms, the general soundness of the banking institutions of the State, and the superior and safe circulating medium furnished by them to the public. It is to be hoped that they will not be disturbed or deranged by any hasty or inconsiderate legislation or change in the fundamental principles of the system, at the same time that nothing will be omitted to be done on the part of the Legislature which may be necessary to perfect, improve, and enforce the requirements of the banking laws and system as they now exist.

All which is respectfully submitted.

M. SCHOONMAKER, Superintendent.

### BROKEN BANKS.

Broken banks whose securities have been disposed of for redemption of the circulation, and rates of redemption.

### THE ORIGIN OF THE BANK OF ENGLAND.

### By T. Babington Macaulay.

Extracted from Mr. Macaulay's fourth volume of the History of England.

- I. Financial difficulties of the year 1693. II. The Lottery Loan. III. Private Bankers of the Seventeenth Century. IV. Opposition to the private banking System. V. First suggestions for a National Bank. VI. The Land Bank. VII. Insecurity of land as a basis of currency. VIII. William Paterson, the originator of the Bank of England. IX. His plan for a Bank. X. Consummation of the Act—its complete success.
- I. Meanwhile the Commons were busied with financial questions of grave importance. The estimates for the year 1694 were enormous. The King proposed to add to the regular army, already the greatest regular army that England had ever supported, four regiments of dragoons, eight of horse, and twenty-five of infantry. The whole number of men, officers included, would thus be increased to about ninetyfour thousand. Cromwell, while holding down three reluctant kingdoms, and making vigorous war on Spain in Europe and America, had never had two thirds of the military force which William now thought necessary. The great body of the Tories, headed by three Whig chiefs, Harley, Foley and Howe, opposed any augmentation. The great body of the Whigs, headed by Montague and Wharton, would have granted all that was asked. After many long discussions, and probably many close divisions, in the Committee of Supply, the King obtained the greater part of what he demanded. The House allowed him four new regiments of dragoons, six of horse, and fifteen of infantry. The whole number of troops voted for the year amounted to eighty-three-thousand, the charge to more than two millions and a half, including about two hundred thousand pounds for the ordnance.

The naval estimates passed much more rapidly; for Whigs and Tories agreed in thinking that the maritime ascendency of England ought to be maintained at any cost. Five hundred thousand pounds were voted for paying the arrears due to seamen, and two millions for the expenses of the year 1694.

The Commons then proceeded to consider the Ways and Means. The land tax was renewed at four shillings in the pound; and by this simple but powerful machinery about two millions were raised with certainty and despatch. A poll tax was imposed. Stamp duties had long been among the fiscal resources of Holland and France, and had existed here during part of the reign of Charles the Second, but had been suffered to expire. They were now revived; and they have ever since formed an important part of the revenue of the State. The hackney coaches of the capital were taxed, and were placed under

the government of commissioners, in spite of the resistance of the wives of the coachmen, who assembled round Westminster Hall and mobbed the members. But, notwithstanding all these expedients, there was still a large deficiency; and it was again necessary to borrow. A new duty on salt and some other imposts of less importance were set apart to form a fund for a loan. On the security of this fund a million was to be raised by a lottery, but a lottery which had scarcely any thing but the name in common with the lotteries of a later period. The sum to be contributed was divided into a hundred thousand shares of ten pounds each. The interest on each share was to be twenty shillings annually, or, in other words, ten per cent., during sixteen years. But ten per cent. for sixteen years was not a bait which was likely to attract lenders. An additional lure was therefore held out to capitalists. On one fortieth of the shares much higher interest was to be paid than on the other thirty-nine fortieths. Which of the shares should be prizes was to be determined by lot. The arrangements for the drawing of the tickets were made by an adventurer of the name of Neale, who, after squandering away two fortunes, had been glad to become groom porter at the palace. His duties were to call the odds when the Court played at hazard, to provide cards and dice, and to decide any dispute which might arise on the bowling green or at the gaming table. He was eminently skilled in the business of this not very exalted post, and had made such sums by raffles that he was able to engage in very costly speculations, and was then covering the ground round the Seven Dials with buildings. He was probably the best adviser that could have been consulted about the details of a lottery. Yet there were not wanting persons who thought it hardly decent in the Treasury to call in the aid of a gambler by profession.

II. By the lottery loan, as it was called, one million was obtained. But another million was wanted to bring the estimated revenue for the year 1694 up to a level with the estimated expenditure. The ingenious and enterprising Montague had a plan ready, a plan to which, except under the pressure of extreme pecuniary difficulties, he might not easily have induced the Commons to assent, but which, to his large and vigorous mind, appeared to have advantages, both commercial and political, more important than the immediate relief to the finances. He succedeed, not only in supplying the wants of the State for twelve months, but in creating a great institution, which, after the lapse of more than a century and a half, continues to flourish, and which he lived to see the stronghold, through all vicissitudes, of the Whig party, and the bulwark, in dangerous times, of the Protestant succession.

III. In the reign of William old men were still living who could remember that there was not a single banking house in the city of London. So late as the time of the Restoration every trader had his own strong box in his own house, and, when an acceptance was presented to him, told down the crowns and Caroluses on his own counter. But the increase of wealth had produced its natural effect, the subdivision of labor. Before the end of the reign of Charles the Second, a

new mode of paying and receiving money had come into fashion among the merchants of the capital. A class of agents arose, whose office was to keep the cash of the commercial houses. This new branch of business naturally fell into the hands of the goldsmiths, who were accustomed to traffic largely in the precious metals, and who had vaults in which great masses of bullion could lie secure from fire and from robbers. It was at the shops of the goldsmiths of Lombard Street that all the payments in coin were made. Other traders gave and received nothing but paper.

IV. This great change did not take place without much opposition and clamor. Old-fashioned merchants complained bitterly that a class of men who, thirty years before, had confined themselves to their proper functions, and had made a fair profit by embossing silver bowls and chargers, by setting jewels for fine ladies, and by selling pistoles and dollars to gentlemen setting out for the Continent, had become the treasurers, and were fast becoming the masters, of the whole City. These usurers, it was said, played at hazard with what had been earned by the industry and hoarded by the thrift of other men. If the dice turned up well, the knave who kept the cash became an alderman: if they turned up ill, the dupe who furnished the cash became a bankrupt. On the other side the conveniences of the modern practice were set forth in animated language. The new system, it was said, saved both labor and money. Two clerks, seated in one counting house, did what, under the old system, must have been done by twenty clerks in twenty different establishments. A goldsmith's note might be transferred ten times in a morning; and thus a hundred guineas, locked in his safe close to the Exchange, did what would formerly have required a thousand guineas, dispersed through many tills, some on Ludgate Hill, some in Austin Friars, and some in Tower

Gradually even those who had been loudest in murmuring against the innovation gave way and conformed to the prevailing usage. The last person who held out, strange to say, was Sir Dudley North. When, in 1680, after residing many years abroad, he returned to London, nothing astonished or displeased him more than the practice of making payments by drawing bills on bankers. He found that he could not go on Change without being followed round the piazza by goldsmiths, who, with low bows, begged to have the honor of serving him. He lost his temper when his friends asked where he kept his "Where should I keep it," he asked, "but in my own house?" With difficulty he was induced to put his money into the hands of one of the Lombard Street men, as they were called. Unhappily, the Lombard Street man broke, and some of his customers suffered severely. Dudley North only lost fifty pounds; but this loss confirmed him in his dislike of the whole mystery of banking. It was in vain, however, that he exhorted his fellow citizens to return to the good old

<sup>\*</sup> See, for example, the Mystery of the New-fashioned Goldsmiths or Brokers, 1676; Is not the hand of Job in all this? 1676; and an answer published in the same year. See also England's Glory in the great Improvement by Banking and Trade, 1694.

practice, and not to expose themselves to utter ruin in order to spare themselves a little trouble. He stood alone against the whole community. The advantages of the modern system were felt every hour of every day in every part of London; and people were no more disposed to relinquish those advantages for fear of calamities which occurred at long intervals than to refrain from building houses for fear of fires, or from building ships for fear of hurricanes. It is a curious circumstance that a man who, as a theorist, was distinguished from all the merchants of his time by the largeness of his views and by his superiority to vulgar prejudices, should, in practice, have been distinguished from all the merchants of his time by the obstinancy with which he adhered to an ancient mode of doing business, long after the dullest and most ignorant plodders had abandoned that mode

for one better suited to a great commercial society.

V. No sooner had banking become a separate and important trade, than men began to discuss with earnestness the question whether it would be expedient to erect a national bank. The general opinion seems to have been decidedly in favor of a national bank; nor can we wonder at this: for few were then aware that trade is in general carried on to much more advantage by individuals than by great societies; and banking really is one of those few trades which can be carried; on to as much advantage by a great society as by an individual. Two public banks had long been renowned throughout Europe, the Bank of Saint George at Genoa, and the Bank of Amsterdam. The immense wealth which was in the keeping of those establishments, the confidence which they inspired, the prosperity which they had created, their stability, tried by panics, by wars, by revolutions, and found proof against all, were favorite topics. The Bank of Saint George had nearly completed its third century. It had begun to receive deposits and to make loans before Columbus had crossed the Atlantic, before Gama had turned the Cape, when a Christian Emperor was reigning at Constantinople, when a Mahomedan Sultan was reigning at Granada, when Florence was a Republic, when Holland obeyed a hereditary Prince. All these things had been changed. New contineuts and new oceans had been discovered. The Turk was at Constantinople: the Castilian was at Granada: Florence had its hereditary Prince: Holland was a Republic; but the Bank of Saint George was still receiving deposits and making loans. The Bank of Amsterdam was little more than eighty yars old; but its solvency had stood severe tests. Even in the terrible crisis of 1672, when the whole Delta of the Rhine was overrun by the French armies, when the white flags were seen from the top of the Stadthouse, there was one place where, amidst the general consternation and confusion, tranquillity and order were still to be found; and that place was the Bank. Why should not the Bank of London be as great and as durable as the Banks of Genoa and of Amsterdam?

Before the end of the reign of Charles the Second several plans were proposed, examined, attacked and defended. Some pamphleteers maintained that a national bank ought to be under the direction of the King. Others thought that the management ought to be

intrusted to the Lord Mayor, Aldermen and Common Council of the capital.\* After the Revolution the subject was discussed with an animation before unknown. For, under the influence of liberty, the breed of political projectors multiplied exceedingly. A crowd of plans, some of which resemble the fancies of a child or the dreams of

a man in a fever, were pressed on the government.

VI. Preëminently conspicuous among the political mountebanks, whose busy faces were seen every day in the lobby of the House of Commons, were John Briscoe and Hugh Chamberlayne, two projectors worthy to have been members of that Academy which Gulliver found at Lagado. These men affirmed that the one cure for every distemper of the State was a Land Bank. A Land Bank would work for England miracles such as had never been wrought for Israel, miracles exceeding the heaps of quails and the daily shower of manna. There would be no taxes; and yet the Exchequer would be full to overflowing. There would be no poor rates: for there would be no poor. The income of every land-owner would be doubled. The profits of every merchant would be increased. In short, the island would, to use Briscoe's words, be the paradise of the world. The only losers would be the moneyed men, those worst enemies of the nation, who had done more injury to the gentry and yeomanry than an invading army from France would have had the heart to do.

These blessed effects the Land Bank was to produce simply by issuing enormous quantities of notes on landed security. The doctrine of the projectors was that every person who had real property ought to have, besides that property, paper money to the full value of that property. Thus, if his estate was worth two thousand pounds, he ought to have his estate and two thousand pounds in paper money. Both Briscoe and Chamberlayne treated with the greatest contempt

\* See a pamphlet entitled "Corporation Credit; or a Bank of Credit, made Current by Common Consent in London, more Useful and Safe than Money."

<sup>†</sup> A proposal by Dr. Hugh Chamberlayne, in Essex-street, for a Bank of Secure Current Credit to be founded upon Land, in order to the General Good of Landed Men, to the great Increase of the Value of Land, and the no less Benefit of Trade and Commerce, 1695; Proposals for the supplying their Majesties with Money on Easy Terms, exempting the Nobility, Gentry, etc., from Taxes, enlarging their Yearly Estates, and enriching all the Subjects of the Kingdom by a National Land Bank; by John Briscoe. "O fortunatus nimium bona si sua norint Anglicanos." Third Edition, 1696. Briscoe seems to have been as much versed in Latin literature as in political economy.

In confirmation of what is said in the text, I extract a single paragraph from Briscoe's proposals. "Admit a gentleman hath barely 100% per annum estate to live on, and hath a wife and four children to provide for: this person, supposing no taxes were upon his estates, must be a great husband to be able to keep his charge, but can not think of laying up any thing to place out his children in the world: but according to this proposed method he may give his children 500% a piece, and have 90% per annum left for himself and his wife to live upon, the which he may also leave to such of his children as he pleases after his and his wife's decease. For first having settled his estate of 100% per annum, as in proposals 1. 3., he may have bills of credit for 2000% for his own proper use, for 10s, per cent per annum, as in proposal 22., which is but 10% per annum for the 2000%, which being deducted out of his estate of 100% per annum, there remains 90% per annum clear to himself." It ought to be observed that this nonsense reached a third edition.

the notion that there could be an over-issue of paper as long as there was, for every ten pound note, a piece of land in the country worth ten pounds. Nobody, they said, would accuse a goldsmith of over-issuing as long as his vaults contained guineas and crowns to the full value of all the notes which bore his signature. Indeed no goldsmith had in his vaults guineas and crowns to the full value of all his paper. And was not a square mile of rich land in Taunton Dean at least as well entitled to be called wealth as a bag of gold or silver? The projectors could not deny that many people had a prejudice in favor of the precious metals, and that therefore, if the Land Bank were bound to cash its notes, it would very soon stop payment. This difficulty they got over by proposing that the notes should be inconvertible, and that every body should be forced to take them.

VII. The speculations of Chamberlayne on the subject of the currency may possibly find admirers even in our own time. But to his other errors he added an error which began and ended with him. He was fool enough to take it for granted, in all his reasonings, that the value of an estate varied directly as the duration. He maintained that if the annual income derived from a manor were a thousand pounds, a grant of that manor for twenty years must be worth twenty thousand pounds, and a grant for a hundred years worth a hundred thousand pounds. If, therefore, the lord of such a manor would pledge it for a hundred years to the Land Bank, the Land Bank might, on that security, instantly issue notes for a hundred thousand pounds. On this subject Chamberlayne was proof to ridicule, to argument, even to arithmetical demonstration. He was reminded that the fee simple of land would not sell for more than twenty years' purchase. To say, therefore, that a term of a hundred years was worth five times as much as a term of twenty years, was to say that a term of a hundred years was worth five times the fee simple; in other words, that a hundred was five times infinity. Those who reasoned thus were refuted by being told that they were usurers; and it should seem that a large number of country gentlemen thought the refutation complete.

In December, 1693, Chamberlayne laid his plan, in all its naked absurdity, before the Commons, and petitioned to be heard. He confidently undertook to raise eight thousand pounds on every freehold estate of a hundred and fifty pounds a year which should be brought, as he expressed it, into his Land Bank, and this without dispossessing the freeholder. All the squires in the House must have known

<sup>\*</sup> Commons' Journals, Dec. 7, 1693. I am afraid that I may be suspected of exaggerating the absurdity of this scheme. I therefore transcribe the most important part of the petition. "In consideration of the freeholders bringing their lands into this bank, for a fund of current credit, to be established by Act of Parliament, it is now proposed that, for every 150L per annum, secured for 150 years, for but one hundred yearly payments of 100L per annum, free from all manner of taxes and deductions whatsoever, every such freeholder shall receive 4000L in the said current credit, and shall have 2000L more put into the fishery stock for his proper benefit; and there may be further 2000L reserved at the Parliament's disposal towards carrying on this present war. \* \* \* The freeholder is never to quit the possession of his said estate unless the yearly rent happens to be in arrear."

that the fee simple of such an estate would hardly fetch three thousand pounds in the market. That less than the fee simple of such an estate could, by any device, be made to produce eight thousand pounds, would, it might have been thought, have seemed incredible to the most illiterate fox-hunter that could be found on the benches. Distress, however, and animosity had made the landed gentlemen credulous. They insisted on referring Chamberlayne's plan to a committee; and the committee reported that the plan was practicable, and would tend to the benefit of the nation. But by this time the united force of demonstration and derision had begun to produce an effect even on the most ignorant rustics in the House. The report lay unnoticed on the table; and the country was saved from a calamity compared with which the defeat of Landen and the loss of the Smyrna fleet would have been blessings.

VIII. All the projectors of this busy time, however, were not so absurd as Chamberlayne. One among them, William Paterson, was an ingenious, though not always a judicious, speculator. Of his early life little is known except that he was a native of Scotland, and that he had been in the West Indies. In what character he had visited the West Indies was a matter about which his contemporaries differed. His friends said that he had been a missionary; his enemies that he had been a buccaneer. He seems to have been gifted by nature with fertile invention, an ardent temperament and great powers of persuasion, and to have acquired somewhere in the course of his vagrant

life a perfect knowledge of accounts.

This man submitted to the government, in 1691, a plan of a national bank; and his plan was favorably received both by statesmen and by merchants. But years passed away; and nothing was done, till, in the spring of 1694, it became absolutely necessary to find some new mode of defraying the charges of the war. Then at length the scheme devised by the poor and obscure Scottish adventurer was taken up in earnest by Montague. With Montague was closely allied Michael Godfrey, the brother of that Sir Edmondsbury Godfrey whose sad and mysterious death had, fifteen years before, produced a terrible outbreak of popular feeling. Michael was one of the ablest, most upright and most opulent of the merchant princes of London. He was, as might have been expected from his near connection with the martyr of the Protestant faith, a zealous Whig. Some of his writings are still extant, and prove him to have had a strong and clear mind.

By these two distinguished men Paterson's scheme was fathered. Montague undertook to manage the House of Commons, Godfrey to manage the City. An approving vote was obtained from the Committee of Ways and Means; and a bill, the title of which gave occasion to many sarcasms, was laid on the table. It was indeed not easy to guess that a bill, which purported only to impose a new duty on tonnage for the benefit of such persons as should advance money towards carrying on the war, was really a bill creating the greatest commercial institution that the world had ever seen.

IX. The plan was that twelve hundred thousand pounds should be

borrowed by the government on what was then considered as the moderate interest of eight per cent. In order to induce capitalists to advance the money promptly on terms so favorable to the public, the subscribers were to be incorporated by the name of the Governor and Company of the Bank of England. The corporation was to have no exclusive privilege, and was to be restricted from trading in any thing but bills of exchange, bullion and forfeited pledges.

As soon as the plan became generally known, a paper war broke out as furious as that between the swearers and the non-swearers, or as that between the Old East India Company and the New East India Company. The projectors who had failed to gain the ear of the government fell like madmen on their more fortunate brother. All the goldsmiths and pawnbrokers set up a howl of rage. Some discontented Tories predicted ruin to the monarchy. It was remarkable, they said, that Banks and Kings had never existed together. Banks were republican institutions. There were flourishing banks at Venice, at Genoa, at Amsterdam, and at Hamburg. But who had ever heard of a Bank of France or a Bank of Spain? Some discontented Whigs, on the other hand, predicted ruin to our liberties. Here, they said, is an instrument of tyranny more formidable than the High Commission, than the Star Chamber, than even the fifty thousand soldiers of Oliver. The whole wealth of the nation will be in the hands of the Tonnage Bank,—such was the nickname then in use, and the Tonnage Bank will be in the hands of the sovereign. The power of the purse, the one great security for all the rights of Englishmen, will be transferred from the House of Commons to the Governor and Directors of the New Company. This last consideration was really of some weight, and was allowed to be so by the authors of the bill. A clause was therefore most properly inserted which inhibited the Bank from advancing money to the Crown without authority from Parliament. Every infraction of this salutary rule was to be punished by forfeiture of three times the sum advanced; and it was provided that the King should not have power to remit any part of the penalty. The plan, thus amended, received the sanction of the Commons more easily than might have been expected from the violence of the adverse clamor. In truth, the Parliament was under duress. Money must be had, and could in no other way be had so easily. What took place when the House had resolved itself into a committee cannot be discovered; but while the Speaker was in the chair, no division took place.

X. The bill, however, was not safe when it had reached the Upper House. Some Lords suspected that the plan of a national bank had been devised for the purpose of exalting the moneyed interest at the expense of the landed interest. Others thought that this plan, whether good or bad, ought not to have been submitted to them in such a form. Whether it would be safe to call into existence a body which might one day rule the whole commercial world, and how such a body should be constituted, were questions which ought not to be decided by one branch of the Legislature. The Peers ought to be at perfect liberty to examine all the details of the proposed scheme, to

suggest amendments, to ask for conferences. It was therefore most unfair that the law establishing the Bank should be sent up as a part of a law granting supplies to the Crown. The Jacobites entertained some hope that the session would end with a quarrel between the Houses, that the Tonnage Bill would be lost, and that William would enter on the campaign without money. It was already May, according to the New Style. The London season was over, and many noble families had left Covent Garden and Soho Square for their woods and hay-fields. But summonses were sent out. There was a violent rush back to town. The benches which had lately been deserted were crowded. The sittings began at an hour unusually early, and were prolonged to an hour unusually late. On the day on which the bill was committed the contest lasted without intermission from nine in the morning till six in the evening. Godolphin was in the chair. Nottingham and Rochester proposed to strike out all the clauses which related to the Bank. Something was said about the danger of setting up a gigantic corporation which might soon give law to the three Estates of the Realm. But the Peers seemed to be most moved by the appeal which was made to them as landlords. The whole scheme, it was asserted, was intended to enrich usurers at the expense of the nobility and gentry. Persons who had laid by money would rather put it into the Bank than lend it on mortgage at moderate interest. Caermarthen said little or nothing in defence of what was, in truth, the work of his rivals and enemies. He owned that there were grave objections to the mode in which the Commons had provided for the public service of the year. But would their Lordships amend a money bill? Would they engage in a contest of which the end must be that they must either yield, or incur the grave responsibility of leaving the Channel without a fleet during the summer? This argument prevailed; and, on a division, the amendment was rejected by forty-three votes to thirty-one. A few hours later the bill received the royal assent, and the Parliament was prorogued.

In the City the success of Montague's plan was complete. It was then at least as difficult to raise a million at eight per cent. as it would now be to raise thirty millions at four per cent. It had been supposed that contributions would drop in very slowly; and a considerble time had therefore been allowed by the Act. This indulgence was not needed. So popular was the new investment that on the day on which the books were opened three hundred thousand pounds were subscribed: three hundred thousand more were subscribed during the next forty-eight hours; and, in ten days, to the delight of all the friends of the government, it was announced that the list was The whole sum which the Corporation was bound to lend to the State was paid into the Exchequer before the first instalement was due. Somers gladly put the Great Seal to a charter framed in conformity with the terms prescribed by Parliament; and the Bank of England commenced its operations in the house of the Company of Grocers. There, during many years, directors, secretaries and clerks might be seen laboring in different parts of one spacious hall. The persons employed by the Bank were originally only fifty-four. They are now nine hundred. The sum paid yearly in salaries

amounted at first to only four thousand three hundred and fifty pounds. It now exceeds two hundred and ten thousand pounds. We may therefore fairly infer that the incomes of commercial clerks are, on an average, about three times as large in the reign of Victoria as they were in the reign of William the Third.

It soon appeared that Montague had, by skilfully availing himself of the financial difficulties of the country, rendered an inestimable service to his party. During several generations the Bank of England was emphatically a Whig body. It was Whig, not accidentally, but necessarily. It must have instantly stopped payment if it had ceased to receive the interest on the sum which it had advanced to the government; and of that interest James would not have paid one farthing. Seventeen years after the passing of the Tonnage Bill, Addison, in one of his most ingenious and graceful little allegories, described the situation of the great Company through which the immense wealth of London was constantly circulating. He saw Public Credit on her throne in Grocers' Hall, the Great Charter over her head, the Act of Settlement full in her view. Her touch turned every thing to gold. Behind her seat, bags filled with coin were piled up to the ceiling. On her right and on her left the floor was hidden by pyramids of guineas. On a sudden the door flies open. The Pretender rushes in, a sponge in one hand, in the other a sword which he shakes at the Act of Settlement. The beautiful Queen sinks down fainting. The spell by which she has turned all things around her into treasure is broken. The money bags shrink like pricked bladders. The piles of gold pieces are turned into bundles of rags or faggots of wooden tallies.\* The truth which this parable was meant to convey was constantly present to the minds of the rulers of the Bank. So closely was their interest bound up with the interest of the government, that the greater the public danger the more ready were they to come to the rescue. In old times, when the Treasury was empty, when the taxes came in slowly, and when the pay of the soldiers and sailors was in arrear, it had been necessary for the Chancellor of the Exchequer to go, hat in hand, up and down Cheapside and Cornhill, attended by the Lord Mayor and by the Aldermen, and to make up a sum by borrowing a hundred pounds from this hosier, and two hundred pounds from that ironmonger. Those times were over. The government, instead of laboriously scooping up supplies from numerous petty sources, could now draw whatever it required from an immense reservoir, which all those petty sources kept constantly replenished. It is hardly too much to say that, during many years, the weight of the Bank, which was constantly in the scale of the Whigs, almost counterbalanced the weight of the Church, which was as constantly in the scale of the Tories.

A few minutes after the bill which established the Bank of England had received the royal assent, the Parliament was prorogued by the King with a speech in which he warmly thanked the Commons for their liberality. Montague was immediately rewarded for his services with the place of Chancellor of the Exchequer.

<sup>\*</sup> Spectator, No. 3.

### FREE BANKING IN TENNESSEE.

- I. An act to amend an act entitled "An Act to authorize and regulate the business of Banking." Passed March, 1856.
- § 1. Be it enacted by the General Assembly of the State of Tennessee, That no bank shall hereafter organize under the Free Banking Law of this State, passed February 12th, 1852, until the sum of one hundred thousand dollars of the lawful currency of the United States of America is bona fide subscribed and paid in, and for this purpose, the Governor of the State shall appoint, upon application for organization, five commissioners, residents of the county where the bank is to be located, whose duty it shall be to open books, receive the subscriptions, collect the money, and hand over the same to the Treasurer and Comptroller of the State, under whose superintendence the bonds shall be purchased.
- § 2. Be it enacted, That no part of the original capital paid in shall be withdrawn either directly or indirectly, either by discount to stockholders, or otherwise, in any way to evade the full force and intention of this section. A failure to comply with this provision shall be deemed a violation of the charter of any bank so diminishing its capital, and the Comptroller, upon proof of the same, is authorized and directed to put said bank or banks immediately into liquidation, as in case of suspension, according to the provisions of said act passed Feb. 12, 1852.
- § 3. Be it enacted, That should the bonds of this State or any other bonds authorized to be used for the purpose of banking, decline, and remain below par, in the city of New-York, for thirty days, as shown by the sales of the Stock Board in that city, it shall be the duty of the Comptroller, and he is hereby authorized and directed to retain the interest which has, or may accrue, on such bonds as are deposited with him, until an additional amount of bonds are deposited as will fully make good the par value of said bonds.
- § 4. Be it enacted, That in the event of such depreciation, the Comptroller is hereby authorized and directed to give notice to all such banks as have deposited said depreciated bonds, and upon their refusal or failure to make the required additional deposit of bonds, or return and surrender an amount of their circulating notes countersigned by the Comptroller equal to the depreciation on said bonds, within sixty days after receiving said notice, it shall be the duty of said Comptroller, and he is hereby directed to proceed at once to take charge of the assets of said bank or banks, and wind it or them up, as in case of suspension, in accordance with said act passed Feb. 12, 1852.
- § 5. Be it enacted, That no bank shall hereafter organize under the Free Banking Law of this State, without at least ten bona fide stockholders, who shall be residents of this State, and said bank shall not at any time contain a less number of stockholders than ten, and a majority of the stock must at all times be owned, bona fide, by actual residents

of this State; and it shall be the duty of the Cashier or President of all banks doing business under this law, to report, under oath, in their semi-annual report, the name, residence, and amount of stock owned by each stockholder.

§ 6. Be it enacted, That the Comptroller is hereby directed and empowered, by and with the consent of the Governor and Secretary of State, to sell the bonds deposited by any bank which may suspend, or may be put in liquidation for violating any of the provisions of the Free Banking Law, in the city of New-York, at public auction, after giving thirty days' notice in at least two prominent daily newspapers,

and in the same number published in this State.

§ 7. Be it enacted, That should any bank or banks organized under the free banking law of this State, be put into liquidation for a violation of any of its provisions, or by the voluntary act of the stockholders, it shall be the duty of the Comptroller to give notice to the note holders in one newspaper published in Nashville, and one in the county where the bank is located (if any), of such liquidation, at least once a month for two years; and if, at the end of that time, all the circulating notes have not been redeemed, he is authorized to hand over the remaining assets, including bonds, to the stockholders, if in case of voluntary liquidation, or distribute the same, or the proceeds thereof among the creditors, in case of involuntary liquidation.

§ 8. Be it enacted, That any bank organized under this act may increase or decrease its circulating notes at pleasure, by withdrawing or increasing its bonds, in the hands of the Comptroller—provided the amount of bonds is never diminished below one hundred thousand dollars, nor increased above three times the amount of paid-in capital.

§ 9. Be it enacted, That the violation of any section or sections of this act shall be deemed a forfeiture of such bank or banks charter, and upon proof of same the Comptroller is hereby directed to proceed to put such bank or banks into liquidation, as in case of suspension.

§ 10. Be it further enacted, That should any bank organized under the provisions of this act or the act that this is intended to amend, fail to redeem its issues, and have to be wound up, any person or persons holding one thousand dollars of the notes of said bank may present them to the Comptroller and receive from him in lieu of said notes one thousand dollars, six per cent coupon bonds, at the New-York market relue provided that the same is not under nor

value—provided that the same is not under par.

§ 11. Be it further enacted, That all persons exercising the privilege of banking under the provisions of the act this is intended to amend, shall not be authorized to discount or shave notes directly nor indirectly at a greater discount than the other banks are allowed under existing laws, and a violation of this section shall forfeit all rights of banking under this act, and shall also be declared guilty of a misdemeanor, and on conviction shall be fined in a sum not less than fifty dollars, nor more than five hundred dollars, for each and every offence.

§ 12. Be it further enacted, That the Comptroller is hereby authorized to have constructed in his office a vault for the safe keeping of the notes of the free banks and State bonds placed in his hands to be

signed or on final deposit of said notes.

§ 13. Be it enacted, That it shall be the duty of the Comptroller to keep in his office a well bound book, in which he shall enter the number and amount of all bills issued under the free banking law of this State, which may be filed with said Comptroller for final settlement.

§ 14. Be it enacted, That the provisions of this act shall apply to those banks which are already organized under the free banking law, as fully as to those which may hereafter organize under the same, so far as the same can be done without infringing their vested rights.

§ 15. Be it further enacted, That the bonds required to be deposited with the Comptroller by virtue of this act, and the act which this is intended to amend, shall be placed upon deposit in the Bank of Tennessee, and that no notes shall be countersigned or issued to any person, bank or association until this is first done.

§ 16. Be it further enacted, That the bonds so deposited shall be subject to the order of the Comptroller only, for the purpose of carrying into effect this act and the act which this is intended to amend.

§ 17. Be it enacted, That this act shall take effect from and after its passage.

### II. An Act to Regulate Banking.

§ 1. Be it enacted by the General Assembly of the State of Tennessee, That from and after the passage of this act, it shall be the duty of each and every bank in this State to make a semi-annual return to the Governor of the State, on the first Monday in July and January of each year, of the names of all its stockholders, the amount of stock owned by each individual or company, the amount of money actually paid into the funds of each bank on each share respectively, and the amount of the discounts of each bank. And each bank shall include in its semi-annual return such other statements as are required of the free banks by the eleventh section of the Act of 1852, Chapter 113, entitled, "An Act to authorize and regulate the business of Banking," passed the 13th of February, 1852, which return shall be verified by the affidavit of the president and cashier of the bank.

§ 2. Be it further enacted, That it shall be the duty of each and every branch bank in this State to make out and forward to the Governor a return, as required in the foregoing section, separate and distinct from the return of the mother bank, which return shall be verified by the affidavit of the president and cashier of the branch bank, and the Governor shall cause the returns required in this and the foregoing sections to be published, as is required of the Comptroller by provisions of the twelfth section of 1852, chapter 113.

§ 3. Be it further enacted, That from and after the first day of September next, no bank or branch bank within this State shall issue, emit, pay out, pass, or circulate any bank note or bill of a less denomination than five dollars, except bills or notes of the Bank of Tennessee; Provided, that nothing herein contained shall be so construed as to make it unlawful for any bank or branch bank to present for payment, or in any other mode transmit for redemption, to any bank of this or any other State, any bill or bills of such bank, of the deno-

mination aforesaid, remaining in circulation after the time aforesaid, with the view and in the mode to stop the future circulation thereof.

§ 4. Be it further enacted, That each and every issuing, passing away, or circulating of each and every bank bill or note of a less denomination than five dollars, except bills or notes of the Bank of Tennessee, shall constitue a new, separate, and distinct offense.

§ 5. Be it further enacted, That the circulation of no bank or branch bank shall, within any six months, computing from the first of January to the first of July, and from the first of July to the first of January, exceed its discounts more than two thousand dollars.

§ 6. Be it further enacted, That each and every bank or branch bank which may be guilty of a violation of any of the provisions of this act, shall be subject to presentment or indictment for every such offense in the Circuit Court of the county in which such offending bank or branch is located; and upon conviction, shall be punished by a fine of not less than five hundred, nor more than two thousand dollars.

§ 7. Be it further enacted, That none of the provisions of this act

shall be applicable to the Bank of Tennessee or its branches.

Approved, March, 1856.

### CLEARING-HOUSE SYSTEM OF ENGLISH RAILWAYS.

[In the hope that it may have some good effect, we copy a most interesting account of the Clearing-House system adopted by the railway companies in England, written some years since by Dr. Lardner. Many of our railway managers are doubtless very familiar with it, but we have reason to know that others are not so.]

"To render clearly intelligible the operations effected by the railway Clearing-House, which has been established upon principles analogous to those of the bankers, it will be necessary, first, to explain the reciprocal interchange of business which takes place, creating systems of mutual credits and debits between company and company.

"The number of companies who have combined their operations in this manner is at present (Nov., 1849) forty-five, comprising all those whose railways lie north of a line passing from Bristol through London to Norwich, in fact, all the railways of the kingdom, except the Great Western, the Southwestern, the London, Brighton, and South Coast, the Southeastern, and their branches, and collateral lines.

"These railways possess 887 stations, at any one of which traffic may be booked for any other; the consequence of which is, that there are nearly four hundred thousand different pairs of places within the circle of operations of the united companies between which traffic may be transmitted. In passing from any one such station to any other, the traffic may pass over part of any or all of the lines of the combined companies with as much continuity of progress as if the whole system were under the government of a single company.

"The service of the transport, whether of passengers or goods, consists, first, in the service of embarkation, which includes all the formalities observed at the station of departure, consisting of booking, weighing, loading, packing, &c.; secondly, of the transport, properly so called, which is represented by a mileage; and thirdly, of the formalities and services of the stations of arrival, where the traffic is unloaded, discharged, and delivered, and frequently sent to the domicile of the party to whom it is addressed.

"A certain rate of charge, according to the nature of the traffic, being agreed upon for each of these parts of the service of transport, the sum receivable for each object of transport must be divided among the companies over whose lines it passes, including those at whose stations the traffic is received and delivered. But the sum payable for such transport is received either by the company at whose station the traffic is booked, or by the company at whose station it is delivered, or partly by one and partly by the other. Two companies must be therefore debited with the sums they thus receive, and they, as well as other companies intermediate between them, over whose lines the traffic may have passed, must be credited in the stipulated proportion according to the mileage.

"The first object to be attended to by the railway Clearing-House is to adjust these complicated debits and credits, as well for passengers as for every species of goods, with simplicity, clearness and dispatch, and in such a manner as not to give rise to subsequent disputes.

"But besides the interchange of credits for traffic, a most complicated account arises out of the circumstance already explained, for the use of the rolling stock. The wagons of each of the numerous companies which enter into the union of the Clearing-House are driven indifferently over the lines of all the others, carrying traffic for various companies, and sometimes transporting a load no part of which is to be credited to the company owning the vehicle in which it is borne.

"By mutual agreement, a certain fixed rate is charged for the use of each class of vehicle, and every company over whose lines the vehicles of other companies pass, being in the first instance credited for the traffic carried by these vehicles, is debited for the use of the vehicles themselves in which such traffic is carried. A mileage account must therefore be kept of all the rolling stock of all the combined companies, so that the course of each vehicle may be traced from day to day and from hour to hour, so that its mileage may be debited to such companies as may have shared its use; and in case of undue delay at the stations of any company a demurrage may be charged according to a stipulated condition, proportional to such delay.

"To adjust in a satisfactory and equitable manner these accounts for the mutual use of the rolling stock, is the second function of the

Clearing-House.

"When the claims of one company upon another, arising out of these transactions, are not liquidated within a stipulated time, they are subject to interest at a rate agreed upon. An interest account must therefore be kept between company and company.

"Luggage, parcels, and other objects of traffic being liable to be lost or unduly delayed, claims and complaints arise between company and company. The settlement of such claims enters into the class of operations to be transacted by the Clearing-House.

"Such are the principal functions which the institution of the Clear-

ing-House is called on to discharge.

"Let us now consider the manner in which these operations are effected.

"The Central Clearing-House is established in London, in a building situate near the Eastern station of the Northwestern Railway. It is placed under the direction of a body of managers elected by the

companies, in which each company is represented.

"This Central Office has agents at all the stations comprised within the circle of the united companies. In adjusting the mutual debits and credits of the companies, no company is regarded either as the debtor or creditor of any other, but the Clearing-House is the common creditor and the common debtor of all."

Dr. Lardner proceeds to explain in detail successively the mode in which each class of claim is arranged, namely, "the goods traffic and live stock," "the passenger traffic and the carrying stock," which in reading we omit for want of time, and in conclusion he adds:

"The principle which has been brought into successful operation in the Clearing-Honse admits of still more extensive application,

which doubtless it will receive.

"The practical effect of the arrangement, even so far as it is hitherto developed, is to facilitate such an interchange of the use of the rolling stock, and the service of the stations between company and company, as to render their benefits in a great degree common to all. Each company by this expedient maintains a stock not only for its own traffic, but to some extent for the traffic of other companies, and in exchange receives the benefit of the stock and the stations of other companies.

"The perfection to which this system tends would be, that a common rolling stock should be kept for all the companies, in the support of which they should as it were club, each contributing a share to its maintenance, in proportion to the quantity of traffic transported

by it.

"At present the interchange is limited to the vehicles of transport, the engines of each company being confined in their movements to the lines of the company to which they belong, but there is nothing which should prevent, under proper arrangements, the same interchange of locomotive power as now takes place with so much advantage in the carrying stock.

"In fine, the Clearing-House may ultimately grow into an establishment for the maintenance of a general locomotive and carrying stock for the use of all the railways, to be supported by the railways in common, and charged to them in the proportion in which they use it.

"So far as regards the management of the traffic, there is nothing which should limit the operation of the Clearing-House to the railways of the United Kingdon.

"By proper arrangements, the same reciprocal conveniences now obtained by the railway companies in reference to the traffic booked through, as it is technically called, might be extended to the entire continent of Europe, so that passengers or goods might be booked at any station on any English railway, for any station on any continental railway. The fare might be received on booking, either wholly or partially, and might be distributed between the various lines over which the traffic should pass, in the same manner as it at present is among the railways which are united under the clearing system."

### FOREIGN ITEMS.

WILL OF A MILLIONAIRE.—On Saturday, letters of administration were issued from the Prerogative Court, under the will of the late Mr. R. Dixon, of Stanstead park, near Emsworth, Hampshire, who, during a long and honorable career as a wine-merchant, had amassed a fortune to the great amount of more than 1,000,000L sterling. The document, dictated shortly before the demise of the testator, exhibits much of the characteristic traits by which he was distinguished through life—being at once clear, concise, and decisive. He bequeaths his estates, together with the mansion, plate, jewelry, furniture, etc., and property in land, valued at about 3000l. per annum, and a sum of 400,000L in the funds, to his widow, for her own absolute use. He leaves to his two sisters, both of whom are advanced in years, 200,000L each. To all his servants 50*l*, a year for ever, and a further sum of 500*l*, to such as had been long in his service. To every laborer on his estate he has left 5*l*., independently of other minor legacies. About two months before his death he distributed the large sum of 85,490L among some of his personal friends, adopting the plan of gifts in order to evade the legacy duty, to the payment of which he had very great repugnance. His charitable performances were in accordance with his prodigious wealth. Some few years back he built and liberally endowed an almshouse for the reception of reduced merchants of advanced age. He also erected a church, with a parsonage and school-house, in the hamlet of Stanstead, making ample provision for their permanent maintenance. To the poor of the district he was ever a generous benefactor. Mr. Dixon was twice married, but leaves no issue by either marriage.—London Paper.

STATE DEPARTMENT. The Financial Condition of Austria.—We have received intelligence from a correspondent to the effect that the Austrian Finance Department, under the management of Baron Bruck, is now making every effort to increase the value of government stocks and government bank-notes. It is generally thought throughout Austria, that, if any one can effect this object, Baron B. is the man. However, Austrian securities have been continually falling, and, until the banks have been placed in a situation to put specie into circulation, this state of things will continue to exist. The establishment of the Austrian Credit Mobilier and of the Hypothecary Bank, two specie-paying institutions, did not have the good effects that were anticipated. The capitalists being obliged, in order to obtain specie, to throw their Austrian securities into market, produced a further tendency to depreciation in all kinds of stocks, and it is asserted by some that no permanent change for the better can take place until the termination of the Eastern war, and then only in the event that Austria shall have continued neutral.

In 1811 Austria owed paper money and public "effects" to the amount of 1000 millions of florins, Austrian currency, (about \$514,000,000,) and the empire became bankrupt. The paper money was reduced to a fifth of its nominal value, and the

interest was also reduced to one half of what it had been, it being paid in paper money; so the interest on the public debt was in fact reduced to one fifth; but, taking into account the reduction of the value of paper money, the public debt was brought down to only a twenty-fifth part of the original liability of the government.

In 1818 a certain reëstablishment of the former debt was made, and the ancient obligations were to form a kind of annual lottery, the fortunate ticket-holder receiving the former interest on his money. But this was no relief to the thousands who lost their fortunes by this breach of trust in 1811, because it was found that the ancient stocks had passed into the hands of speculating capitalists, who were the only gainers.

Shortly after this, the Austrian Bank was founded. It was to be thoroughly independent of government. There were originally 50,000 shares, for which 100 florins in cash and 1000 florins in paper money were paid on each. But the bank immediately reimbursing itself by paying four florins in specie for ten florins in paper money, the government became directly indebted to the bank, and this state

of affairs has continued ever since.

In 1846 this debt was 1037 millions of florins, and during this year the Austrian government reduced its expenses within the limits of its income. The receipts amounted to the sum of 164,236,000 florins, and the expenditures reached 163,106,000 This promising condition of Austrian finances, however, did not last long. The political and commercial crisis of 1847 gave these securities a terrible blow, since which there has been no reaction, and in 1847 the income had fallen to 161,000,000, and the expenditures had reached 168,000,000 of florins. During this and the following year, the Austrian Bank had 73,000,000 of florins; but when the news of the revolution of February, 1848, was received, a panic seized the whole community, and in the beginning of April the specie had fallen to 35,000,000 of florins, when the government prohibited the banks from redeeming their notes, and also prevented the exportation of specie. In 1854 the sum advanced to meet the necessities of war amounted to 192,000,000 of florins, besides which there were 219,000,000 of treasury bills, making a floating debt of 411,000,000 of florins. A decree, issued in the same year, compelled the bank to retire from circulation \$148,000,000 of treasury bills, and another created the national loan of 500,000,000 of florins, the interest on which was to be paid in gold and silver. With this loan, and with the produce of the customs, which were to be paid in specie, it was intended to bring the claims of the bank against government down to 80,000,000 of florins by 1858; but it was soon discovered that these decrees could not be carried into effect, and in consequence of this state of affairs, in October, 1855, the government was obliged to alienate Crown lands.

Exclusive of the large floating debt, the present indebtedness of the Austrian government is set down at the enormous sum of 2,036,000,000 millions of florins.

Case of the Late Mr. John Sadlier, M. P.—There is every reason to believe that, when all is known, it will be found that the amount of frauds of which the late Mr. Jno. Sadlier has been guilty will not be much under £200,000. First, it has been ascertained beyond all question that Mr. Sadlier had forged no fewer than \$0,000 Royal Swedish Railway Company's shares, and obligations of £5 each, on which large sums of money were raised. This forgery alone is to the nominal sum of £250,000, only it is not yet known what amount he was able to raise on the shares and obligations. In addition to these forgeries, there are forgeries of several deeds and mortgages of estates in Ireland. As regards these, however, the extent is not yet known; but perhaps the boldest and most daring forgeries of all are those which relate to the deeds for the purchase of property in the Encumbered Estates Court of Ireland. The forged deeds purport to bear the signatures of the commissioners, the registers, the chief clerk, the solicitors in the various causes, and the commissioners' seal. The extent to which this class of forgeries has been committed may be inferred from the fact that the stamp duty alone on these, amounted to several hundred pounds.

A considerable number of forgeries on private individuals, also, have already been discovered, and there is every reason to believe that others yet remain to be ascertained. Those which have been detected are supposed to amount to nearly £100,000. In addition to the classes of forgeries already enumerated, Mr. Sadlier has been guilty of the assignment of deeds held in trust by him to an enormous amount. The drafts? all the forged deeds and mortgages are in Mr. Sadlier's own handwriting.

The forgeries of signatures are in every case remarkably successful. Those of the Encumbered Commissioners are said to be so perfect that the most experienced sage could not detect the forged deeds from the genuine.

The act of self-destruction was, it is believed, precipitated by the circumstance of four of the holders of deeds relative to the purchase of one of the encumbered estates, who had advanced £10,000 to Mr. Sadlier, having, on Saturday last, gone over to Ireland with his solicitor, for the purpose of having the deed registered.

Mr. Sadlier endeavored to frustrate the intention of the party, but failed. On the continent, too, where his transactions were to an enormous extent, great alarm prevails. In a letter which he wrote before leaving Gloucester square for Hampstead Heath, where he put an end to his existence, he declares that, without the knowledge of any human being, unaided and unassisted, he committed the most diabolical crimes of which it was possible to be guilty; that these crimes must now be discovered; and as they would involve the ruin of hundreds of innocent families, he had preferred to die rather than witness the sufferings which they must endure.

The crime of suicide must have been contemplated by Mr. Sadlier for some time before he committed the act, for he purchased "Taylor on Poisoning," and had evidently read it through till he came to the chapter on the essential oil of bitter al-

monds, when he turned down the page as if he had made up his mind.

The frauds of Sir John Paul, Strahan & Bates, are not only much smaller in amount, but they are tame compared with his. They denote a combination of criminality, boldness, ingenuity and tact, such as the world never before witnessed.—London Morning Adv.

M. LEON FAUCHER.—The death of M. Leon Faucher, an eminent French writer on politics and finance, was chronicled a few months since. One of his latest productions was a Summary View of the Finances of France, England, and Russia. Of the latter, he says:

"We have thus passed in review the finances of Russia as well as those of England and France. The task has been undertaken without passion or prejudice. We believe we have represented a faithful picture, as far as the official documents (which in the Russian Empire are few, obscure, and incomplete, and even in France, under the existing regime, are not remarkable for their number or perspicuity) would enable us, of the respective positions of the belligerent powers. The comparison is eminently interesting and instructive. What will be the conclusion derived from it by the public opinion of Europe? Doubtless, in the first place, that Russia has never measured her ambition to her real forces, and consequently possesses neither power nor right upon her side in the struggle. It possesses a moral of still greater significance, by demonstrating, as it incontestably does, the advantages of constitutional government, and which is best calculated at times of difficulty, or in face of an exterior enemy, to afford the greatest amount of force and security to a nation. Evidently, it is not despotism. Here is a power, the most absolute of any environed by the double authority of earth and heaven-king and pope-disposing, without control or limit, of the lives as well as the fortunes of his subjects, not contenting himself with obedience, but commanding adhesion; and, notwithstanding, the forces of this much-dreaded autocrat have been seen to recoil at the first shock. There is no description of government more vulnerable than is despotism. Its temperament renders the commission of faults inevitable; its character permits it neither to avow nor to repair them. All the forces of which it disposes can be easily detached from it: let it experience a reverse, and desertion soon succeeds to convert the check into an absolute rout. As to the forces of which it has not the disposition, they are those which nothing can replace, namely, public opinion and credit. Despotism can never summon opinion to its assistance, for opinion is its enemy. The sources of credit contract and close before it from the moment that it is pressed by necessity. What security, in fact, can it offer to the lenders? Is there another law than its own will in the Empire? If the despot possesses less of scruples than of caprices, who shall compel him to respect his engagements? Public credit emanates from institutions, it does not attach itself to individuals. In the terms of comparison presented by the war, in proportion as an absolute power becomes abandoned, we witness the increase of the power and wealth of the governments. Russia is at the foot of this scale; and -I regret for my country to be obliged to confess it—England is incontestably at the summit.

N. B.—All Stocks not specified as Bonds are transferable by inscription. All Bonds (except Hudson lst and 2d Mortgage and Eric Convertibles) are payable to bearer. \* Denotes Ex-Int. or Ex-Dividend.

#### BANK ITEMS.

BANK CAPITAL.—The Board of Directors of the Bank of Commerce in New-York, on the 21st of April, in pursuance of the authority conferred on them in their articles of association, unanimously determined to increase its capital stock by an issue of fifty thousand additional shares of one hundred dollars each, which shall be subject in all respects to the stipulations, conditions, and limitations in said articles, contained and declared with respect to the shares now existing. The present capital of the Bank is five millions of dollars. With the proposed increase, the capital will then amount to ten millions of dollars. The capital at present is larger than that of any other banking institution in the United States. The Bank has paid for twelve years past, at least eight per cent dividend uniformly—a rate with which any bank shareholder should be satisfied.

New-York.—Caleb Barstow, Esq., for some years one of the Vice-Presidents of the Chamber of Commerce of this city, and President of the Arctic Insurance Company, has been elected President of the St. Nicholas Bank, in place of Joseph W. Corlies, Esq., who declined a reëlection.

Mercantile Bank.—D. H. Arnold, Esq., has been elected President of the Mercantile Bank in place of W. B. Douglas, Esq., who retires on account of ill-health.

Grocers' Bank.—H. Dwight Williams, Esq., recently of Cleveland, Ohio, has been appointed Cashier of the Grocers' Bank, New-York, [and since declined,] in place of Samuel B. White, Esq., resigned.

City Bank.—Moses Taylor, Esq., one of our prominent merchants, has been elected President of the City Bank, New-York, in place of Gorham A. Worth, Esq., deceased.

Albany.—The National Bank of Albany has been organized in that city. President, William E. Bleecker, Esq.; Cashier, R. C. Martin, Esq., of Schoharie.

Cazenovia.—The Bank of Cazenovia has been organized with a capital of \$120,000. President, Charles Stebbins, Esq.; Cashier, Benjamin F. Jervis, Esq.

Fredonia.—H. D. Miner, Esq., a merchant of Rome, N. Y., has been appointed Cashier of the H. J. Miner Bank at Fredonia, in place of S. M. Clements, Esq.

Rochester.—The Flour City Bank commenced business on the 1st of April, 1856, with a capital of \$200,000. F. Gorton, Esq., President; E. H. Vredenburgh, Esq., Cashior

Geneva.—William T. Scott, Esq., Cashier of the Bank of Geneva, has been elected President of the Bank of Geneva. S. H. Verplanck, Esq., succeeds Mr. Scott as Cashier.

Oswego.—The capital of Luther Wright's Bank, Oswego, will be increased on the 1st of May one hundred thousand dollars, making the aggregate \$300,000. Stephen H. Lathrop, Esq., hitherto Cashier, has been elected Vice-President. Amos A. Bradley, Esq., of the Fort Plain Bank, succeeds Mr. L. as Cashier.

CONNECTICUT.—The Rockville Bank, at Rockville, Tolland county, Connecticut, has commenced business with a capital of one hundred and thirty thousand dollars. President, Allen Hammond, Esq.; Cashier, Elliot B. Preston.

MASSACHUSETTS.—The stockholders of the Grocers' Bank met at the banking-house, State street, April 21st, Mr. Samuel G. Reed, the President, in the chair. It was voted that a committee of five stockholders be appointed to confer with the directors in relation to an application to the Legislature for an alteration of their charter (reduction of capital stock) and a change of name. Messrs. Robinson, Heywood, Harvey, Low, and Conant were appointed upon this committee. The name suggested, in case the Legislature allows of the reduction of the capital stock

so that the Bank can recommence business, is the "Pacific" Bank. The Bank continues to pay off its liabilities as fast as presented, exhibiting in this matter a commendable promptness. Only about forty thousand dollars of its circulation still remain unredeemed.

Cochituate Bank.—All claims against this Bank not presented before the first of April of the present year are, by order of the Supreme Court, for ever barred. The creditors of the Bank, including bill-holders, have received a dividend of sixty per cent, and the probability is, that they will receive about fifteen per cent more, leaving a deficiency of twenty-five per cent. The bill-holders have a remedy against the stockholders at the time the Bank failed, but whether they will take advantage of it or not, remains to be seen.

New-Jersey.—The Union Bank, at Frenchtown, has commenced business under the General Banking Law of the State, with a capital of \$100,000.

MARYLAND.—The Maryland Senate passed, by a vote of twelve to nine, the act previously passed by the House of Delegates, to repeal the law enforcing stamp tax on bonds, bills of exchange, promissory notes, etc. For some years past this law has brought into the State Treasury of Maryland an annual revenue of sixty to seventy thousand dollars.

Books of subscription to the stock of the American Bank, at Baltimore, were opened on the 15th day of April. The capital proposed is \$500,000.

Ohio.—F. W. Seymour, Esq., has been elected President of the Portage County State Bank, at Ravenna.

Public Deposits.—The Senate Committee on Finance, of the Ohio Legislature, report a prospective loss on deposits with their banking institutions. The Commit-

tee say:
"It appears that large sums of the public money were deposited with, or loaned to, companies, individuals, or institutions which were not of that high character for pecuniary responsibility that was requisite to make them fit depositories for moneys so deposited or loaned. The result is, that a considerable portion of the funds that should be in the treasury, ready to meet the demands upon it, is at present, to say the least of it, unavailable for that purpose.

"There appears to be a balance due from the City Bank of Cincinnati on account of public moneys deposited in said Bank by the late Treasurer, Mr. Breslin, or by

his orders-

| The sum of  | 379,811 | 95 |
|---|---------|----|
| From the Commercial Bank of Toledo, on similar account, | 24,927  | 03 |
| From Daniel Beckel, (Dayton,)                           |         |    |
| From W. W. Cones & Co., (Cincinnati,)                   | 47,799  | 68 |
| -   | ····    |    |

"The City Bank of Cincinnati, as already known to the public, has failed. The committee have not been able, as yet, to obtain any reliable information, in regard to the dividend which the Bank will be able to pay to its creditors. It is, however, probable that a small portion of this debt may eventually be realized.

Total, (exclusive of interest,).....\$203,324 14

"Judging from information that the Committee deem reliable, the Committee believe that the balance due from the Commercial Bank of Toledo will be paid in full as the assets of the Bank, in the hands of receivers, consist mostly of lands, town-lots and buildings, or of deferred payments on sales of real and personal property. Full payment cannot be safely anticipated in less than two years.'

TENNESSEE.—The Bank of Trenton, at Trenton, has been established under the general banking law, with a deposit of the Tennessee six per cents as collateral for circulation. President, R. W. Hubbard, Esq.; Cashier, O. B. Caldwell, Esq.

WISCONSIN.—C. C. Barnes Esq., has resigned the Cashiership of the Waukesha County Bank, and disposed of his interest in the Bank, and is succeeded by O. Burroughs, Esq., formerly Assistant-Cashier.

CANADA.—The Provincial Bank of Canada, at Stanstead, has commenced business with a capital of \$100,000. President, William Stevens, Esq.; Cashier, I. W. Peterson, Esq.

Caution to Bankers.—A correspondent and notary public suggests, (what has long been in practice by many banks, but neglected by others,) that in the indorsement of collection paper, transmitted by mail, each cashier should affix to his own signature the name of the town or city in which he resides. This should be done also by the indorser and each indorsee, in order that notices of protest may be more safely addressed. "An Alphabetical List of Cashiers in the United States" has been published in this work, showing the residence of each, which has proved very serviceable to such cashiers and notaries public as have kept it for reference. (See August No., 1854.)

Another Caution.—Every week we observe notices, or advertisements, of losses by mail, including cash, bills of exchange, promissory notes, bonds, etc. These losses are generally attributed to carelessness among the Post-office officials; but we know many cases where they arise from misdirection by the writers, and we have no doubt that nine tenths of such losses or delays arise from a similar cause. Bank officers will generally find safety and convenience promoted by the use of printed envelopes, having not only the printed address of their correspondents, but also the name of the bank from which the letter emanates, so that in case of misdirection, the postmaster may know to whom and where to return it.

# Notes on the Money Market.

NEW-YORK, APRIL 26, 1856.

Exchange on London at sixty days' sight, 1093 a 1093.

A satisfactory change has occurred since the publication of our last No., and is still in progress in financial affairs. At the close of last week, we received intelligence from London and Liverpool to the 1st inst., confirming our anticipations as to the restoration of peace in Europe; with official information as to the signing of the treaty of peace at Paris, on the 30th ultimo. This event had been generally looked for by the best-informed people of France and England, from the first moment that Russia assented to join a congress of representatives to consider the peace question. This belief attained more general credence from time to time among the people, thereby creating its due following upon commercial and monetary transactions.

Now that peace in Europe is agreed upon, there has arisen a fresh movement or excitement in the business markets, and speculation in stocks. The sales of cotton in England continue upon a large scale; amounting to about sixty-six thousand bales per week at fair prices—showing renewed activity in the great manufacturing districts. The Bank of France has already reduced its rate of interest. Of the reduction in the rate of discount by the Bank of France, the London Times says:

"It had stood at six per cent since the 1sth of October last, and it is now put at five per cent. Looking at the fact that only a few days have clapsed since the Bank of France was purchasing bullion at a loss, in order to keep its supply at a point to prevent uneasiness, and also at the mania for speculation, which is likely to rage with increased force, the step seems in some degree premature. There is every reason to suppose, however, that the natural return of specie to the country will be rapid, and that under the most prudent course, the alteration would have been called for within two or three weeks. At the Bank of England, the relaxation will probably be more gradual, but a preliminary movement must be expected almost immediately, since the reduction in Paris must exert a further influence upon the continental exchanges, which were already generally favorable."

The financial position of Great Britain is such as to cause no fear of a deficit, or of a retrograde movement in the market value of consols. In March, April, and May last, consols were hold in the London market at 924 a 934—in the face of heavy loans pending, and with no prospect nor even indications of a peace with Russia—and in 1854, while the war was in full blast, consols were at times at par. Certainly, in the present aspect of public affairs, they must gradually be restored from 92 to 93, 94, 95, and finally to par again.

The money market of Wall street is not so far or so permanently relieved as to promise any aid or facilities to new enterprises of costly character. There are no inducements for the commencement of new railroads—in fact, capital is wanted for the completion of those commenced in 1854, which have been delayed by the difficulties provailing in the money market throughout the year 1855. Up to the first of this month, there was a marked disinclination among capitalists to invest for long periods; uncertainty prevailed as to the turn of affairs in Europe; as it was feared that any increased stringency there, or a further advance in the rate of interest, would have the effect to cause the return of American securities, and to unsettle our own market. There is now some inclination apparent to establish new banks—to prosecute to early completion those railroads that are in part finished—to invest capital for manufacturing purposes, and to enter upon fresh enterprises to a moderate extent.

The rates of discount on business paper have ruled high for months past; and in the face of larger loans by our banks than at any former period, prime business paper is selling at 7 to 8 per cent. For second-rate paper, the terms vary from 9 to 12 per cent, according to the needs of the borrower and the means of the lender. For loans on call, there is abundant capital available at 6 to 7 per cent. This has given a new impulse to the stock market, and accelerated prices considerably.

During the six years, 1849-1855, the construction of railroads in this country was on too large a scale, unparalleled by any other country in the world; and we may add, that without the aid of foreign capital, these objects could not have been accomplished in the establishment of that great net-work of railroads now extending in all directions. Various new enterprises are now suggested of a similar kind; but we do not think the present period a favorable one for their execution. Out of the large sums hitherto invested, only a comparatively small amount has as yet paid a fair remuneration to the investing parties; and some of our bost railroad shares are still below par.

Instead of establishing new roads, more or less competing with those already established, we should first allow the latter to aid the development of the great resources of the States. Looking at the list of railroad shares in other countries—for instance in Germany—we find but few shares below par, while a great number of them are held at three-fold their par value. The increase of trailic here is much larger than any part of the Old World; and if the existing roads are not interfered with by new projects, further benefit will be derived from them.

The Legislature of Virginia has authorized the issue of Treasury notes—a financial expedient at the present time, that will not be sustained. The bonds of the State have declined to 93}, and are rather heavy, as the debt of the State has been enlarged considerably. Of the new financial scheme the Richmond Dispatch of the 91st March, states that

"The revenue under the new tax bill will reach, according to the First Auditor, the sum of \$3.660,000, while some others who have given attention to the State finances, are of opinion that it will be nearer \$4.000,000. Either sum will make the commonwealth very easily absorb the floating debt, and yield a plenty for all other demands. Such a determination on the part of the State to meet promptly all demands, should bring her securities upon a level with the best State securities in the Union."

The Secretary of the Treasury gives notice to the holders of any bonds, certificates, or other evidences of debt due by the State of Texas, that unless the same shall be received at the Treasury Department within sixty days, they will be excluded from all benefits of said act, agreeably to the fourth section of the same.

The new city loans of the City of New-York, were awarded on the 7th April. The accepted bids were principally by savings, banking, and other banking institutions. The loans were \$1,000,000, in a 6 per cent stock, 1859; \$2.800,000, in a 5 per cent, 1898; total, \$4,400,000.

The 6 per cents were awarded at 100.37 to par, average 100.01, and the 5 per cents at par. The 6 per cent stock obtains a premium of 693, or neary seven tenths of one per cent. The 5 per cent loan will be all taken at par. The scheme of the New Park is almost universally approved of, and will no doubt contribute largely to the growth of the city during the next ten years.

A marked feature in financial matters, is the great abundance of capital available on call; and among the banks on short paper. For the latter purpose, bills maturing under thirty days are readily taken, and longer paper, of the first order, is freely passed at 7 to 8 per cent. This morning the stock market was not as buoyant as reported yesterday, in consequence of the impression following the bank statement of last week, to the effect that the banks were, or are doing too much business—extending their loans too freely upon a specie reserve of thirteen millions.

On the other hand, many of our Wall-street financiers, (and among them the very oldest institutions in the street.) are willing, and feel authorized, to extend their loans still further; relying, in the first place, upon existing and prospective rates of exchange of a favorable character; secondly, upon the most flattering prospects enjoyed in the Western States, and which must have their effect upon our city and State, as New-York is and must remain the central depot or depository of unemployed capital. Hence it will be found that the deposits of our city banks, which a year ago were only seventy-six millions, are now ninety-one millions, and will, in all probability, reach one hundred millions before July next.

And, again, the commercial resources of the country are believed to be greater than at any former period: and its ability to sustain a largely-accumulated foreign debt, (somewhat, it is true, too much upon the high-pressure principle,) is unquestioned.

There is a check existing upon speculative business, indicated by the high rates for commercial paper not of the first class. Eight, ten, and even twelve per cent, is readily paid by many houses; and the banks, notwithstanding their extremely liberal policy, cannot possibly do all that their customers required. Hence, the brokers have on hand large amounts of business paper for negotiation, at the rates above mentioned; while the bankers have large sums unemployed limited to six or seven per cent, on call.

Several of the Western railroad companies neglected to provide the interest on their bonds April 1st. These were:

- 1. The Columbus, Piqua & Indiana Railroad Company, indorsed by the Cleveland, Columbus & Cincinnati Railroad Company, by the Bellefontaine & Indiana Railroad Company, and by the Indianapolis & Bellefontaine Railroad Company.
  - 2. The Chicago and Mississippi Railroad First Mortgage Bonds.
  - 8. Of the New-Albany & Salem Railroad Company First Mortgage Bonds.
  - 4. Of the Ohio Central Railroad Company Mortgage Bonds.

Of the first-named companies, it is manifestly their duty to combine together, even at this late hour, and protect their obligations. At one time it was supposed that railroad companies were chartered for the exclusive purpose of constructing railways; but of late years they have travelled out of their legitimate sphere to aid other companies and thereby endanger their own resources. Hereafter no such guarantee for indorsement for account of other companies will be available in this

market; the discredit already attached to the vast amount of railroad bonds by the recent default, will operate prejudicially in the negotiation of new loans for railroad companies generally. The sage advice of Alexander Hamilton can be appropriately urged upon all public companies, and upon weak companies especially, namely:

"If the maintenance of public credit, then, be truly so important, the next inquiry that suggests itself is, By what means is it to be effected? The ready answer to which question is, By good tath; by a punctual performance of contracts. States, like individuals, who observe their engagements, are respected and trusted; while the reverse is the fate of those who pursue an opposite conduct. Every breach of the public engagements, whether from choice or necessity, is, in different degrees, hurtful to public credit. While the observance of that good faith, which is the basis of public credit, is recommended by the strongest inducements of political expediency—it is enforced by considerations of still greater authority. There are arguments for it which rest on the immutable principles of moral obligations." immutable principles of moral obligations.

A portion of the bondholders of the Columbus, Piqua & Indiana Railroad Company, (with the indorsement of the Cleveland, Columbus & Cincinnati Railroad Company, and others.) called a meeting of the bondholders to consult as to measures to be adopted to secure the payment of the coupons now unpaid, and of the principal at maturity. It is to be hoped that energetic measures will be adopted and presecuted. If other Western companies were to follow the policy of the Cleveland & Columbus Company, there would be no chance for the further negotiation of Western railroad bonds in Wall street.

It is rather strange that no provision is made by statute for cases where coupons and bonds are lost by accident. A considerable amount of coupons was lost with the steamer Arctic. The unfortunate steamer Pacific, it seems, also had on board a large amount of coupons; among them some of the six per cent Virginia State Bonds. A leading foreign house of this city, to whom part of these coupons were directed, inquired at the Auditor's Office, under what conditions the State would be ready to pay the value of the lost coupons, and received the following rather pert

"Second Auditor, Richmond, Va., April 7, 1856.
"Your letter of the 3d inst., to Mr. W. L. Jackson, late Second Auditor, has been received. In reply thereto, I have only to inform you that we have no law on our statute-book whereby the holders of coupons can be relieved when they are lost. I would, however, advise you to wait until next winter, at which time the Legislature will probably meet again, when you can make an application for relief.

(Signed) W.M. A. MONCURE, Second Auditor of Va."

We are sorry to learn by the Canada papers that the Canadian Grand Trunk Railway is under protest. The Commercial Advertiser, of Montreal, under date 14th inst., says:

"The Grand Trunk has exploded, being unable to pay either its January or July interest, but professing to have means to furnish the line from Stradford to St. Thomas, the ministry will not entertain the proposition submitted to it for a further provincial guarantee.

"The surplus revenue of last year was only £22,000, and to meet the defalcations of the Grand Trunk, and the short-comings of the municipal borrowers, the customs-duties are to be increased one fourth. Let us hope that the increase will be adjusted as to encourage native industry, and to make the burthen as light as possible upon the people.

"We are informed, on pretty good authority, that some such proposition as this will be made by the government for the relief of the Grand Trunk—an advance of £350,000 to be expended on the bridge, and £3000 a mile on 72 miles of road between Toronto and Guelph. The amount which the Company has in hand is £540,000, making in the whole about £1,000,000; the government to pay the interest upon the Provincial Dobentures until such time as the road is completed." pay the interest upon the Provincial Debentures until such time as the road is completed.

The Austrian Credit Mobiller Bank, at Vienna, we learn by our German files per Atlantic, intends to send agents to the United States for the purpose of opening connections with commercial houses. Arrangements of this kind would considerably promote the mutual trade between the United States and Austria.

The Times and other journals express much satisfaction at the announcement that the United States Government had assented to the payment of the Sound Dues up to the 14th day of June

Our stock market, during the month under review, exhibited no remarkable activity, but more steadiness and independence than we have witnessed for years past. The position of the country is sound, the prospects are highly flattering, and almost warrant a continued improvement of prices. During the European war, the supply of foreign capital was partly checked, and, sovere as that lesson appeared at first, it has taught us to manage financial enterprises with our own means, thus making us daily more independent of financial movements in the old world. For this reason, the news from Europe, received during the month, has been of but little effect upon the value of our securities; and even the restoration of peace, anticipated since the beginning of the year, has caused but little change, although it will, within a short time to come, develop a beneficial influence. For years past we were accustomed to look at the quotations of English Consols as a barometer of the financial and social position of Europe; but now peace being restored, the fluctuations of that security will depend only upon local movements, and meet comparatively little attention on this side of the Atlantic. Early this month, the default of several Western

railroad companies has created considerable excitement among foreign bankers, and the repudiation of the Cleveland, Columbus & Cincinnati R. R. Co., one of the wealthiest Western corporations, of the payment of interest on the bonds of the Columbus, Piqua & Indiana Company, legally guaranteed by the former, was unanimously condemned.

Such failures of course must depreciate the value of American securities abroad, and check confidence in any future enterprise. Another unfavorable feature of our market is the continued rise of foreign exchanges, a result of the heavy spring importations, the payment of which requires a larger amount than we can draw against our shipments of produce: we, therefore, for the next two months, must resort to the export of specie to make up the balance.

We annex the prices of leading State loans at the close of the past eight weeks:

Prices of government securities have reached at present such a high point that the investment of capital only yields a very small interest, and the transactions, therefore, are now extremely limited. Business in State stocks, at the opening of the month, was very quiet, and prices of Missouri and Virginia unwarrantably depressed; later the feeling improved, and at advancing rates a large business was done in Tennessee, Ohio, Missouri, and Virginia 6s. Indiana 5s, California 7s, and Louisiana 6s are rather low, while Kentucky 6s are scarce, and held at higher rates.

City and county bonds have been well sustained, and a good business was done in the former, while transactions in the latter were confined to the bonds of Kentucky counties, considered a safe and profitable investment by home and foreign capitalists, and we may add that those bonds are fully secured by the taxable property of the counties, who are levying a special tax for the payment of interest.

Railroad shares have been subject to the usual fluctuations, but generally the tendency was upward. The most important feature of the market is the large business in Cleveland & Toledo, in which the daily transactions have been very extensive; prices have considerably advanced. The transactions in Erie were also large, but prices have not been sustained, there being no prospect of a new dividend. Prices of Reading during two months were depressed by the decreased business of the road in March, exclusively a result of the heavy snow; but this deficiency will soon be made up, the road being now taxed to its utmost capacity, and during the summer the traffic will considerably exceed that of any former year, and prices, consequently, must improve, as indicated already by the last quotations. This stock is likely soon to reach par, large dividends being expected by the increased net earning of the company. Michigan Southern, at the close of the month, is also in favor, and prices rate high. Michigan Central is steady. The Company is now

<sup>•</sup> Dividend off,

doing a large business, the Canada Great Western Road being an inexhaustible feeder. Generally, our railroads this month have done a very large business, and the earnings for April are likely to exhibit a considerable increase, compared with last year.

In railroad shares we note an advance of a most satisfactory nature during the month, namely: Baltimore & Ohio R. R., 4 per cent; Cincinnati, Hamilton & Dayton, 5; Cleveland & Toledo, 6, (besides a dividend of 4 per cent;) Galena & Chicago, 2; Macon & Western, 2; Michigan Central, 3½; Michigan Southern, 5; Reading, 1. The monthly receipts are such as to secure liberal dividends to the shareholders. The railroad companies, East and West, have almost universally determined to advance their rates of travel from 20 to 25 per cent—their former rates being too low for profit. The last mails from Europe bring additional orders for railroad shares and bonds, where the dividends are regular and the interest punctually paid.

Railroad bonds have been well sustained, and only require promptness on the part of our Western companies to insure a further advance. Messrs. Decoppet & Co. have closed the negotiation of the \$600,000 of First Mortgage Third Section Sinking Fund Eight per Cent Bonds of the Milwaukee & Mississippi Railroad, at 90 and interest. This constitutes the balance of the First Mortgage Bonds that can be issued upon this road between the city of Milwaukee and Prairie du Chien, on the Mississippi River. The total issue of Third Section Sinking Fund Bonds is \$2,500,000, of which \$1,250,000 are reserved in the hands of a trustee for redemption, in 1862 and 1863, of \$1,250,000 First Mortgage, on 1st and 2d sections. Of the balance, \$650,000 were negotiated in July last the present \$600,000 constituting the balance. A large portion of this negotiation was for foreign account.

We annex the closing rates for the past eight weeks:

The transactions in railroad bonds were mostly in large sales of Illinois Central Bonds, the fluctuations of which are exhibited by our list. The annual report of the directors of that Company is a highly interesting document, to which the attention of our readers is called. Small sales were also made in Eric Second and Third Mortgage Bonds and Sinking Fund; also in Eric Convertibles, mostly at improving rates. New-York Central Sixes and Sevens are steady; Hudson River R.R. Third Mortgage Bonds were in demand at rather fluctuating rates; and small sales were reported in Terre Haute & Alton Second Mortgage Bonds, and North Indiana Goshen Branch Bonds. Milwaukee & Mississippi Third Section bonds were in demand for foreign account.

## DEATH.

IN NEW-YORK CITY, Thursday, April 8d, in the seventy-third year of his age, GORHAM A. WORTH, Esq., for the past thirteen years President of the City Bank, Wall street, New-York. He began life as a merchant's clerk in the store of the father of Judge Edmonds, in Hudson; he then became Clerk in the Bank of Hudson; afterwards Cashier in the Mechanics and Farmers' Bank of Albany; then Cashier of the United States Branch Bank at Cincinnati; then Cashier of the Tradesmen's Bank of this city, from whence he was transferred to the City Bank, with which he has been connected, as Cashier and President, about thirty-one years. He was elected Cashier in 1825, and President in 1842.

#### THE SOURCES OF NATIONAL WEALTH.

THE mineral wealth of this country exceeds that of any country in the world; and in future years, we must look to the employment of their products as essential sources of national wealth. Great stress has been for years laid upon the value and the prospective importance of the California gold mines; so much so, indeed, that other sources of wealth, of more essential utility, have been in a measure lost sight of. We allude to the coal and iron products of the country, which, if properly developed and encouraged, would furnish employment to thousands of additional operatives. Coal requires no legislative protection. We need fear no competition from foreign quarters, and so profitable or so valuable have these mines become, and their prospective value is so great, that capital will flow in from various sources for their further development. Nature has lavishly provided a road-bed of the best order from the anthracite coal mines of Pennsylvania to tide-water, whereby three million tons of coal may be transported annually one hundred miles with the aid of a small motive power. This is exhibited in the business operations of the Reading Railroad Company. This road has a gradual descent from the mines to the tide-water, so that one engine has the power of transporting no less than four hundred and thirty-seven tons of coal at one time.

Important changes are being made in the facilities for transporting coal from the interior of Pennsylvania to places where it now is, and

for years will be, wanted. One important link is the construction of the Northern Central Railroad from the Susquehanna river towards Baltimore. A road is also authorized from Reading to Allentown, Pennsylvania, destined to form at an early day a part of the shortest line from New-York to Pittsburgh, and thence to other portions of Western Pennsylvania and to Eastern Ohio. Railroads are also in progress in Kentucky which will in a few years serve to develop the extraordinary wealth of that State in its coal and iron mines. Other States also evince more attention to, and appreciation of, their great resources in those minerals. For instance, Missouri has an Iron Mountain of its own, capable of furnishing the raw material in sufficient quantities for the whole world, if needed. Virginia, North-Carolina, Pennsylvania, and the northern portions of Maryland, also abound in iron, the value of which for the construction of railroads and for other purposes, cannot be too highly estimated.

It is well for us, as a people, to bear in mind these liberal provisions of nature, because they will, ere long, assume a primary (not a secondary) importance in the commercial and manufacturing features of the country; because we are contributing millions annually to Europe for supplies of iron, when we have them at our own doors; and finally, because great changes are going on in Europe and Asia which will shortly render necessary more attention here to this im-

portant source of wealth.

According to the recent official documents before us, it would appear that a vast system of railroads is now in contemplation in Eastern Europe, and in various portions of India, which in itself will require all the iron that England can produce for twenty years to come. Russia has suffered in the recent war, for the want of a continuous line of railroads from St. Petersburg, on the north, to the shores of the Black Sea on the south. If these essential aids to a nation in its defences, had been liberally possessed by Russia, she could have accomplished more in her late contest with the allies. This desideratum will be in a few years supplied. Her government is an enlightened one, and has adopted such measures as will secure a complete series of railways adapted to the commercial wants of her people, and to the exigencies of future war.

It may be truly said that the most extraordinary change, in the matter of railroads, now going on in the world, is the construction of extensive lines in India. On the 3d of February, 1855, the opening of the Indian Railway was celebrated, showing that European capitalists and merchants find a wide field in India for the more profitable employment of money and for the extension of commercial interests, the introduction of new articles of commerce, and the wider diffusion and extension of British and Continental manufactures. The commercial interests of the United States will participate in the permanent benefits arising from this extended circle of civilization, and from the introduction of useful articles produced in this country, and which will gradually find their way among the people of the East.

According to a recent debate in the British Parliament, it appears that the East-India Railway was sanctioned as far as Delhi, 900 miles,

and contracted for as far as Allahabad, 590 miles, and was to be completed by the end of the year 1856. It was opened as far as Raneegunge, 56 miles from the Calcutta and Delhi line, near Burdwan, and distant from Calcutta 125 miles. The works on the line from Calcutta to Rajmahal, on the Ganges, were in a very forward state as far as the More river, a distance of 60 miles from the Raneegunge and Burdwan junction. The rate of interest guaranteed by the East-India Company upon £4,000,000 capital is 5 per cent. The Great Indian Peninsula Railway (North-eastern Extension) was authorized to Shawpore on the Thul-Ghaut road; it was opened to Callian, 35 miles from Bombay, and contracted for and ready for opening as far as Wasindree, about 12 miles beyond Callian. The South-eastern Extension, which was to diverge from Callian, was sanctioned to Poonah, 85 miles, and contracted for to Campoolie, at the foot of the Bhore-Ghaut. The rate of interest guaranteed was 5 per cent on £1,000,000 of capital. No part of the Madras Railroad was yet opened, but the line from Madras which was to diverge to the northwest of Bellary, in the direction of Bombay, was surveyed and partly set out. The line from Madras to the south-west was set out in its whole extent to Beypore, on the Western or Malabar coast. It was difficult to ascertain the precise state of the works, as they were in the course of construction by the railway engineers themselves, but Major Pears says that the line to the western coast would be open for traffic at the close of the present year. The first part of the works on the line towards Bombay was also in a forward state; the rate of interest guaranteed was 41 per cent on £500,000, 5 per cent on £500,000 more, and 43 per cent on £1,000,000. The Scinde Railway was sanctioned from the harbor of Currachee to the Indus, at or near to Jurruck, a distance of 110 miles. The company was at present engaged in collecting the capital, and prosecuting the necessary surveys. The rate of interest guaranteed was 5 per cent on £500,000. The Baroda and Central-India Railway was sanctioned from Surat to Baroda, and thence to Ahamedabad, a distance of 163 miles.

The report of the Directors of the Great Indian Peninsular Railway, October, 1855, shows that much has been already accomplished with the aid of the East-India Company, who have formally sanctioned a further extension of the south-eastern line from Poonah to Sholapoor, 165 miles. The plans for this extension are executed, the line is staked out, and the works would be let in the course of a few weeks. This line will open up the productive cotton districts of Sholapoor, and when completed will accomplish one of the great objects undertaken by the establishment of the Company. The other still more prominent object of the Company, is the line surveyed through the Berar cotton fields, across the peninsula on the northwest, to join the East-India Railway in the Valley of the Ganges. Toward the accomplishment of this latter object, a further portion of the railway has been opened within the present month, namely, from Callian to Shawpore, seventeen miles in length. This makes 51 miles of railway now in operation. The works in the hands of the contractors are for 37 miles, between Callian and the foot of the Bhore-Ghaut. Two other

contracts have recently been let, one comprising the ascent of the Bhore-Ghaut to Poonah—total under contract, 91 miles. The directors state that there is every reason to believe that the lines of the Company will not exceed an average cost of £10,000 per mile, including the rolling stock. The receipts for passengers have gradually increased with the increased mileage opened for traffic, but the working expenses are comparatively heavy.

A letter from Bombay, dated Oct. 4, 1855, says:

"The portion of the great Indian Peninsular Line from Callian to Wasind, of which I wrote in my last, was opened on Monday, the 1st of this month. It is at Callian that the railway separates into two branches, the north-eastern and the south-eastern, the former ascending the Thull-Ghaut, and proceeding through the rich cotton grounds of Candeish and Berar to the Ganges, the latter passing up the Bhore-Ghaut to Poonah, Sholapoor, and the great Madras line. The newly-opened portion belongs to the former, or Thull-Ghaut branch."

These several statements show that a vast revolution is now going on in the East—that it will lead to important commercial changes, in which the people of the United States must participate. It is likewise apparent that a rise will occur in the market value of iron, from the increased demand abroad, and a better time never occurred before for investments of American capital in rolling-mills, foundries and furnaces, with a view to the supply of our own market, at least.

The prospects for the railroad interests of the United States were never better. The leading companies of New-York, Pennsylvania, Ohio, Michigan, and Illinois, are now in the receipt of large revenues from passengers and freight. Compared with former years, their receipts are 25 to 33 per cent greater; and for the current year, the business will no doubt be still larger. One remarkable fact in this connection may be stated, and should be borne in mind, namely, that many miles of railroad in Ohio and Pennsylvania, constructed of British iron, actually pass over thousands of acres covering extensive beds of iron, not yet opened, but which require only the fostering care of the government in aid of the exertions of capitalists, to develop their vast importance. In confirmation of our remarks as to the demand for iron for India, we will add the following extract from the circular of Toms & Co., London, with their annual report upon the British India trade:

"The wants of India continue to manifest themselves on a large scale, and thirty thousand tons have been negotiated this week; the price we believe to have been about £9 in London, or very nearly the same as a similar quantity was contracted for last December. The bulk will be manufactured in the north of England, and the rest in the south of Wales. France is likely, as soon as the pressure of war has passed away, to be a buyer to even greater extent than during its existence; and she has taken no insignificant quantity of rails from us these two years past. Russia will probably be in the market for rails on a large scale shortly after peace is declared, in order to complete her lines southward, for the war has revealed how impossible it is for her to successfully repel invasion without increased facilities for the transfer of troops and stores. Other large continental orders are spoken of as likely to come forward. The market is firm, and the last mail from the States brings orders for rails and sheets."

# THE ARCHITECTURE OF COUNTRY BANKS.

# PREMIUM PLAN, No. II.

The advancement and improvement of Architecture, like that of Science and Literature, are the results of education, and hence must be progressive.

From the time when our fathers first built their rude log cabins in the forest, we have been borne by the stream of progress slowly but constantly onward. It is only necessary to look back a few years to see how far we have floated into regions that were unknown to them.

When our country was in her infancy, strength and convenience alone were necessary. But as society advances in intelligence and wealth, and our commercial relations become expanded, new forms and structures are required, combining both utility and beauty.

The indication of the times point out distinctly that the United States will ere long occupy the highest position among the commer-

cial nations of the world.

The rapid multiplication of banks along the great avenues of trade, and throughout the whole extent of our fast-increasing country, has forced upon us the inquiry, What constitutes the excellencies of a banking-house, and particularly those of rural banks, as they are the most neglected?

We will therefore consider what a country bank ought to be,

I. As to economy of cost and space. II. Light, ventilation, and heating.

III. Arrangement and convenience of vaults, desks, counters, etc.

IV. Safety against fire and burglars.V. Durability and architectural effect.

## I. Economy of Cost and Space.

By this is understood simplicity of plan and convenient arrangement of apartments.

In the erection of a country bank a twofold object is to be attained: First, To supply a place of business, and, Secondly, To furnish a residence for the bank officer and his family. This latter should be convenient to, and yet safely detatched from, the former, and so possess all the conveniences and homelike character possible.

On the principal floor should be the banking-room, the entrance to which should be conspicuous and direct, as all indirectness, while it does not add to convenience or effect, adds to the expense.

Connected with it should be a vault, sufficiently large to contain a

large safe, and plenty of room for books and papers.

In the rear, and united to it, should be the directors' room, which could also be used as a cashier's room, an entrance to which could be obtained both through the banking room and the dwelling.

In the rear of the bank offices, and safely separated from them,

should be the principal apartments of the dwelling for the family of the bank officer.

# II. Light, Ventilation, and Heating.

It is of the utmost importance that every apartment should be sufficiently supplied with light, and it is always better to have too many than too few windows.

VENTILATION.—Although this is one of the most important subjects connected with the erection of a building, it is surprising to see how

little attention is given to it.

When the large fire-place and chimney were in general use, these supplied a means for ventilation; but from motives of economy and otherwise, these are fast disappearing, and their places supplied by furnaces and flues. In every apartment there should be one or more openings for ventilation—one near the ceiling and one near the floor. These should be capable of being opened or closed, so as to regulate the quantity of air passing through them. Their size should be regulated by the size of the apartment and the number of occupants. These flues should be located in opposite extremities of the room from that at which the warm air enters, and should be carried separately to the top of the building, and terminated by some ejecting ventilator, by the use of which all downward currents are avoided, and in almost every case an upward current produced, no matter how light or in what direction the wind is.

Heating.—The difficulties and disadvantages of the grate and stove fires are becoming so generally felt and known, that to enumerate them would be unnecessary; and in view of the numerous disadvantages many plans have been suggested for warming the whole building with one fire.

The most prominent of these inventions are heating by steam and hot air.

The former, owing to the necessary pipes and apparatus, being very expensive, and requiring great care and attention, are but rarely

adopted, except in public buildings or manufactories.

Heating by pure hot air from properly constructed furnaces, is considered the best and most economical. They supply the pleasantest heat, besides being conducive to economy of space and cleanliness. In the selection of a furnace, care should be taken to provide one that does not destroy the chemical character of the atmosphere.

# III. Arrangement and Convenience of Vault, Counters, etc.

The vault should be so located as to be at all times convenient to the clerks and under their eye, and unapproachable from the outside of the counter. It should be sufficiently large to contain room for a money-safe, besides being a repository for books and papers; it should be built fire-poof, and well secured.

The counter should be placed so far from the wall as to allow ample space for the movement of clerks, and room for desks and

bank furniture.

# IV. Safety against Fire and Burglars.

No building can be completely fire-poof so long as timber is a component part. But timber may be made, by various means, to resist,

to some degree, the action of fire.

Fire can always be prevented from spreading in a building, by having the partition walls of brick, or filled in with brick or some earthy composition. A coat of mortar laid under the floor between the joists, besides preventing the spread of fire, deafens sounds. No wood work should be exposed externally; the cornice should be of brick, stone, or cast iron. The roof should be of slate or metal.

For the protection of banks against burglars, many ingenious contrivances have been invented. But as yet none has been found to be entirely successful, and experience has proved that a good watchman, together with a few precautions, such as lining the window-shutters and doors with boiler-iron, are the best security a bank can have. This precaution, while it proves a barrier to cutting or boring through to get at the fastenings, also renders them fire-proof.

# V. Durability, Strengh of Material, and Architectural Effect.

The durability of any structure depends upon the nature and chemical properties of its materials—its strength, upon the disposition of of the materials.

The foundation being the most important part of any structure, great care should be taken to have it solidly and securely laid.

For this, owing to its great durability and strength, stone is the best material.

The bottom or footing of the walls should be spread considerable beyond the face of the superincumbent work, the object of which is to give a large area of bearing surface. These courses should be composed of large stone, laid flat, and of nearly equal thickness.

Too much care cannot be given to the footing of the foundation, as

upon this much of the stability of the structure depends.

The superstructure can be of brick, stone, or iron. But of whatever material it is, great care should be taken that it is all sound and well put together; if not, the effects of such carelessness are sure to show themselves sooner or later, and generally at a period when remedial effort is useless.

ARCHITECTURAL EFFECT.—An architectural character should be given to the country bank, so as to express by its whole appearance the purpose for which it was erected. Not only should the whole building have this character, but every part of it should be made to convey, so far as possible, the same impression.

A vain desire to produce something grand often causes the country bank to be so disguised, that to distinguish with accuracy between it

and the town hall would be next to impossible.

Or the front of some expensive and luxurious mansion in a neighboring city is copied and reproduced, without consideration as to its consistency for the purpose or situation of the building.

This dishonesty in the expression of a building, and the ignorant introduction of ornament, instead of being sanctioned by custom, as it seems to be, should be rejected as unworthy of a discriminating judgment and cultivated taste.

In the accompanying plans an attempt has been made to combine, as far as possible, all these excellencies in a banking-house of 25 feet front.

The banking-room has one door and three large windows, which furnish abundance of light.

On the counter, there is ample room for three or four desks, and sufficient space behind it for a double desk, bank-press, and other furniture.

A desk for the use of the customers is placed at the end of the short counter. The area for the public is paved with encaustic tiles.

The front entrance to the dwelling is through the entry, opposite to the end of which is the principal stairs leading to the second story.

The vault to have double walls, with an air chamber between; the tops arched, and to be furnished with chilled iron doors and vestibule, and secured with Day & Newel's lock.

It is to be of sufficient capacity for the storage of books and papers for a number of years, besides containing a large-sized iron safe.

It is located away from the outside walls, and consequently an entrance cannot be effected by digging through from without the building. It is under the eye of all the clerks, and cannot be approached without passing behind the counter and past the door of the director's room. This room is well lighted, and is convenient of access to and from the banking-room and dwelling. It can also be used as a cashier's room.

The building to be ventilated in the most improved manner, and heated by hot air, from a furnace located in the cellar.

It is to be fire-proof, having cast-iron cornice, metal roof, and outside shutters lined with boiler-iron, the floors to be deafened or pugged. The shutters to front window of banking-room can be either arranged to slide into wall, as shown on plan, or made to fold. The shutters to front windows of second and third stories will be inside shutters, made to fold; all other windows to have outside shutters.

The principal apartments of the dwelling are in the rear of the bank offices, and attached to, but safely separated from them.

The upper stories constitute part of the dwelling of the bank officer, and is filled up with all the conveniences of the best modern style.

The building to be of brick, with marble front to first story, marble window-dressings, and cast-iron cornice.

The side elevation to be entirely of brick, with plain marble window-dressings and brick cornice.

The dimensions of the different apartments have been noted upon the plan.

The size of the banking-room should, however, be regulated by the amount of business it will be required to accommodate.

The cost of the building will vary from eight to ten thousand dollars, according to circumstances and situation.

#### PREVENTION OF COUNTERFEITING.

Report of the Association for the Prevention of Counterfeiting.

Boston, 1856.

Ar a meeting of the Association of Banks for the Suppression of Counterfeiting, in April, the following report was submitted in reference to the plan of Mr. C. D. Seropyan, for the prevention of counterfeiting and altering bank notes, together with some bank notes received from Mr. Seropyan, and prepared by him for this purpose:

"The Committee state that its importance, and the character of the certificate presented by Mr. S., as to its being a perfect protection against counterfeiting by certain specified modes, and against alteraations by any mode, was such as to call for the utmost care in its examination. This has been freely bestowed upon it. Upon submitting it to the ordinary tests of other similar inventions, it seemed somewhat impregnable; but, under a more searching trial, in the hands of the chemist who has had such matters heretofore in charge for us, and who was, therefore, induced to take this matter in hand, it proved to be quite vulnerable, one of the notes having the righthand upper corner 1 taken off, without materially damaging the yellow groundwork of the note, and the centre of the opposite die, or 'counter,' removed, and a 5 printed in each place so neatly as to escape detection when shown to sundry bank-officers, until their attention was especially called to the alterations. The Committee have seen this note, so altered, and are of the opinion that such a note would be taken by nine tenths of the persons in the habit of receiving banknotes; especially as such notes as these, if circulated, would be circulated as unalterable, and would, therefore, probably not be so closely scrutinized, on that point, as ordinary bank-notes. As to their being copied by anastatic and kindred processes of printing, the undersigned is not prepared to express a decided opinion; possibly, in view of specimens of anastatic printing from France and England, exhibited to the Committee last year, the Committee would join him in saying that there were grave doubts whether that might not be done by experienced hands. The result attained by photographists in Paris, last year, are such as, in the judgment of the undersigned, to forbid our continued reliance upon colors as a protection against photographic and kindred processes of copying. The plan submitted, then, may not be regarded as safe on this score. But the great and fatal objection to its use, in the opinion of the Committee, probably will be, that it cannot be relied upon to prevent the alteration of banknotes; while its character of unalterability will help the passing of altered notes printed in this way.

"The undersigned accordingly recommends the passage, by the

Committee, of the vote herewith submitted.

"JAMES G. CARNEY.

"April 16, 1856.

"Voted, unanimously, That the Executive Committee cannot recommend to the associated banks the adoption of the plan submitted by Mr. Seropyan, for the prevention of counterfeiting and altering banknotes, as furnishing any substantial additional security to their issues."

## MB. C. D. SEROPYAN'S PATENT BANK-NOTES.

#### To Mr. J. Smith Homans, Editor Bankers' Magazine, N. Y.:

Dear Sir: Having elsewhere expressed in strong terms our approbation of Mr. Seropyan's plan for the prevention of counterfeiting and alteration of bank-notes, checks, drafts, etc., a notice of which you have already published, we feel constrained to allude in terms of dissent to the tenor of a circular issued at Boston, April 16, by the Executive Committee of the "Association of Banks for the Suppression of Counterfeiting," and signed by their chairman and secretary. This Association condemn Mr. Seropyan's plan in unqualified terms, as expressed in the following vote, unanimously adopted, namely:

"That the Executive Committee cannot recommend to the associated banks the adoption of the plan submitted by Mr. Seropyan, for the prevention of counterfeiting and altering bank-notes, as furnishing

any substantial additional security to their issues."

The Committee state that they have altered one of Mr. Scropyan's notes, by the removal of the denominational number 1 on the upper right-hand corner, "without materially damaging the yellow groundwork of the note;" and that "the centre of the opposite die, or counter, was also removed, and a 5 printed in each place so neatly as to escape detection when shown to sundry bank-officers, until their attention was especially called to the alterations." We have not seen the note thus aftered by the Boston Committee, but we have seen and examined other impressions from the same plate upon which attempts have been made to remove the dies in question, and substitute 10; and although the work was certainly done with great neatness, and by an accomplished engraver, still the yellow groundwork of the note was materially damaged, and the transparency of the blue-black ink greatly impaired. But granting that the alteration in both cases was so adroit as to "escape detection when shown to sundry bank-officers," and that the notes so altered "would be taken by nine tenths of the persons in the habit of receiving bank-notes," we beg leave to suggest to the Committee that the words "ONE DOLLAR," under the vignette, and the large white letters, ONE, stopped out from the yellow groundwork, were unchanged, and unchangeable in a successful manner, for reasons which "the chemist who has had such matters in charge" for the Committee will better understand when he has made the experiment. On the notes examined by us, and above alluded to, this alteration had been attempted with entire want of success. While these very prominent features of the altered note remain unchanged, "sundry bank-officers," and "nine tenths of those who are in the habit of receiving bank-notes," will not present any very promi-

nent claims to sympathy if they should confess themselves the victims of such a fraud.

But as respects "alterations," we are prepared to take much broader ground than the Committee have assumed, and we declare our conviction that there is no color or device whatever, printed upon the face of any bank-note, or other evidence of value, which cannot be removed by modes now known to chemists, and therefore we reach the startling conclusion that there is no mode at present known or in use, that can entirely prevent alterations being made. But, while we make this general statement, we are happy to avail ourselves of this occasion to renew our opinion, previously expressed, that Mr. Seropyan has, in a very ingenious and simple manner, so complicated the difficulties to alteration, by processes entirely his own, that, in our humble judgment, a successful alteration of one of his notes is practically impossible. This security against successful alteration was an unexpected and incidental result of Mr. Seropyan's efforts to discover effectual means to prevent photographic and anastatic counterfeiting; and the Boston Committee do Mr. S. an unintentional injustice when they state that his first and prominent claim is the unalterability of his notes, and that if vulnerable at this point they are worthless, because they induce want of usual caution from their supposed unalterability. No printed or written document is unalterable, in the strictest sense of that term, and every adroit rogue will laugh in his sleeve at the confiding public who hold such a dogma. But a successful alteration is quite another thing, and against such we believe Mr. Seropyan's plan presents far greater difficulties (difficulties which are practically insurmountable) than any other yet devised.

The specimen of Mr. Seropyan's notes experimented on by the Boston Committee, was shown to them with the proviso that it was not a perfect and satisfactory one, being printed from an old plate unsuited to his peculiar system, and he very justly claimed that the Committee should withhold any public expression of their opinion of his patent until he could submit to them impressions from a new plate, which was preparing for the New-Haven Bank, with a special adaptation of dies, "counters," and denominational marks to his system. Why this reasonable request was disregarded, the Committee do not explain.

But the great danger from the paper currency of our times is not from alterations—which when most successful are still easily detected with moderate skill—but it is from literal counterfeits, duplicates, or fac-similes of the original and genuine notes, so faithful as in all respects to defy the unaided eye of the most skillful expert to detect them. Such fac-similes have been made by the new processes of photography and of anastatic printing. Within a few days last past, a photographic fac-simile of a bank-note was shown in the office of one of our most renowned houses for bank-note engraving in New-York, so entirely faithful in every detail of work, ink, and complexion, that after the most minute and careful inspection, several of the engravers there present, and the head printer of the establishment, declared it to be a genuine imprint in black ink from a steel plate, and this opi-

nion was yielded only when, by a touch from a brush wet with the proper chemical solvent, the illusion vanished. When the highest art of the engraver is thus wounded in the house of its friends, what security have we for our circulation?

We do not hesitate to declare our deliberate conviction, in view of the present resources of photography and anastatic printing in the hands of skillful counterfeiters, that the whole existing issue of bank notes now in use, printed in ordinary colors, (including the red backs and overwork,) to be only a sham, a delusion, and a false reliance, so far as it is accepted as a means of security against these species of counterfeiting. It is only because these processes are comparatively new, and therefore not yet generally known, and that they involve the nicest skill in manipulation, and no slight chemical knowledge, that they have not already become common, as they certainly will become

at no distant day.

Now, Mr. Seropyan's process of preparing and printing bank-notes has been contrived expressly to avoid these dangers, and with a full and experimental knowledge of the arts in question. When, therefore, we read in the Committee's circular, that "the results attained by photographists in Paris, last year, are such as, in the judgment of the undersigned, to forbid our continued reliance upon colors as a protection against photographic and kindred processes of copying," we are led forcibly to suspect that the gentlemen are discoursing about what they do not understand, and that the first principles of the art in question, as applied to the subject in hand, are unknown to them. Again, the Committee say: "As to their being copied by anastatic and kindred processes of printing, the undersigned is not prepared to express a decided opinion; possibly, in view of specimens of anastatic printing from France and England, exhibited to the Committee last year, the Committee would join him in saying that there were grave doubts whether that might not be done by experienced hands." We beg very respectfully to protest against such a vague and unsubstantial insinuation of a doubt as this, where the question is not one of opinion, but of fact; and we deem it very unjust thus to throw the shadow of their official influence over a process which is either what it claims to be, or is not, and the decision of which claim can be met only by positive experimental results. From the awkward dilemma in which the Committee are placed, they can extricate themselves only by producing successful copies of Mr. Seropyan's notes by one or both of these two processes, or by owning their error. Either of these courses will entitle them to the continued respect of the eminent body that they

The Executive Committee in Boston would have saved your readers the trouble of perusing this communication, had they been able to state that they had obtained even a very moderate degree of success in reproducing one of Mr. Seropyan's notes by either of these modes. It requires more than the expression of a "grave doubt," or of an obscure allusion to something wonderful done in Paris last year, to unsettle well-established facts in science, or the validity of a process depending for its success upon a most ingenious use of these facts.

It would extend too much the length of this communication to enter at this time upon an exposition of the principles involved in Mr. Seropyan's patent, upon the adroit use of which his notes are supposed to be proof against successful photographic and anastatic copying. Suffice it to say, for the present, that we have examined the glass plates upon which Mr. Seropyan has made successful photographic copies of red-faced bank-notes, (supposed before to be proof against this mode of reproduction,) while beside them, and exposed in all respects to the same influences, were the wholly abortive efforts to copy the notes prepared by his patent. The process of anastatic printing depends upon the difference between one part of the surface and another—as between the ink and the clean paper. But in Mr. Seropyan's process the whole surface of the note has one uniform character, and no contrast is possible.

At another time, if needful, we can give you more in detail our reasons for the confidence we have expressed, and still have, in Mr. Seropyan's process. We write without conference with the other distinguished gentlemen who have signed the certificate of Mr. Seropyan, and do not, therefore, wish to commit them for what we have said in this communication. We hope that every fair and honorable scrutiny may be given to Mr. Seropyan's plan. It is a matter of the greatest importance; and we confess that if this plan is not reliable, we see no safety in any other now known, by which our paper cur-

rency can be preserved against successful fraud.

Yours, very respectfully,

New-Haven, May 5, 1856.

James D. Dana, B. Silliman, Jr.

Interesting Law Case in New Orleans.—The following decision made at New-Orleans is of interest to those doing business with that city:

United States District Court, Judge McCaleb sitting in Admiralty. Brownlee, Homer & Co. vs. the ship "Venice." The libellants, merchants and residents of St. Louis, claim from the ship Venice damages which they allege they have sustained in consequence of the failure on the part of those having charge of said ship to deliver in good order a quantity of dry goods shipped from Boston to Horrell, Gayle & Co., of New Orleans, to be forwarded to the libellants in St. Louis. The bill of lading was in the usual form, and bound the ship to deliver the goods to the consignees in New Orleans, in the same good order in which they were shipped at the port of Boston.

The goods were shown to have been damaged while they remained on the wharf in New-Orleans exposed to the rain. Notice of the discharge of the goods had been given to the consignees. It appeared that the goods were not well covered with tarpaulins.

The Court was of opinion that, if the consignees did not attend to the receipt of merchandise when advised that the same had been discharged, it was the duty of those charged with the delivery to cause the goods to be stored at the consignees' expense, and therefore pronounced for damage in favor of the libellants, the amount to be ascertained by reference to R. M. Lusher, Esq., Commissioner in Admiralty.

## ANNUAL REPORT OF THE U.S. MINT.

MINT OF THE UNITED STATES, PHILADELPHIA, January 31, 1856.

Sir: I have the honor to present the following report of the operations of the Mint of the United States and its branches, including the

Assay Office, for the year 1855.

The deposits received and coinage executed at the principal mint during the past year were as follows: Gold deposits, \$10,534,103.84; gold coins struck, \$10,594,454; fine gold bars, \$16,298.14; silver deposits, including silver separated from the California gold, and silver purchased pursuant to the act of March 3, 1853, \$2,680,556.75; silver coinage, \$1,419,170; copper coinage, \$16,030.79; total deposits of gold and silver, \$13,214,660.59; total coinage, \$12,045,952.93.

The coinage was comprised in 10,885,619 pieces.

The operations of the mint, except the receiving of deposits and melting, assaying, and paying the same, were suspended on the 19th of July last, at which time the repairs authorized by an appropriation made by the last Congress to the mint building, were commenced. The construction of these repairs was intrusted to officers designated by the Treasury Department, and they are being completed in the most thorough and substantial manner, so as to render the mint edifice, in all its departments, entirely fire-proof. Advantage has also been taken of the opportunity thus offered to introduce useful changes and improvements in the rooms appropriated to the different branches of business, whereby the efficiency of the mint, and the security of the treasure therein, will be greatly advanced and promoted. During the suspension of coinage, deposits were received and paid as heretofore, so that no inconvenience to depositors has resulted therefrom. But the accumulation of bullion, and the necessity of supplying coin, especially to the Treasury of the United States, have made it necessary to resume the coinage operations, notwithstanding the work upon the repairs is in an unfinished state. The preparation of standard ingots for coinage was commenced on the 4th of the present month, and the delivery of coins to the treasurer was resumed on the 19th inst. mint is now in active and efficient operation, although considerable inconvenience is experienced in consequence of the repairs not being fully completed. The suspension of coinage for the period of six months, will sufficiently account for the diminished operations at the principal mint during the past year.

The deposits received at the branch mint at New-Orleans amounted to \$2,852,510.69; of which the sum of \$431,156.83 was in gold, and \$2,420,953.86 in silver. The coinage was \$450,500 in gold, and \$1,918,000 in silver; total coinage, \$2,368,500; the number of pieces

struck was 5,556,100.

The branch mint at San Francisco received of gold deposits the sum of \$20,876,310.08; of silver, the sum of \$259,787.47. The coinage operations were as follows: gold coin, \$17,598,300; fine gold

silver coinage, \$164,075; total coinage operations, \$21,121,752.48; comprised in 1,471,272 pieces.

The deposits received at the branch mint at Dahlonega were in gold, \$116,662.07; the coinage, (gold,) \$116,778.50; the number of

pieces struck was 25,366.

At the branch mint at Charlotte, the sum of \$216,988.86 was deposited for coinage; the coinage, comprised in 53,268 pieces, amounted to \$217,935.50. The operations of this branch, as well as that estab-

lished at Dahlonega, are confined to gold.

The assay office at New-York received, during the year, the sum of \$26,687,701.24 in gold bullion, and the further sum of \$350,150.08 in silver; of this amount, the sum of \$195,241.44 was parted from gold, and \$2,061.87 was derived from the Lake Superior mines. The number of fine gold bars stamped at this office was 6182, of the aggregate value of \$20,441,813.63. For the bullion deposited during the year, payment has been made in fine gold bars to the amount of \$17,246,247.74; and in coins to the amount of \$9,791,603.58.

bars, \$88,782.50; unparted or unrefined gold bars, \$3,270,594.93; The entire amounts received at the mint and its branches, including the assay office, during the year, were as follows: gold, \$58,862,922.92; silver, \$5,711,448.16; total, \$64,574,381.08. The coinage operations for the same period were as follows: gold coins, \$28,977,968; fine gold bars, \$20,546,894.27; imported bars, \$3,270,594.93; silver coins, \$3,501,245; copper coins, \$16,030.79; total coinage, \$56,312-

732.99; comprised in 16,997,807 pieces.

It is proper to remark that the aggregate of the deposits above presented embraces a considerable amount of re-deposits; as, for example, unparted or unrefined bars made at San Francisco are sometimes re-deposited at the other minting establishments, and a portion of the fine bars formed at the assay office are transferred to the mint for coinage. Deducting these re-deposits, the actual amount of the precious metals brought into the mint and its branches, during the year, was \$55,151,902.37.

The amount of gold of domestic production deposited in 1855 was \$49,351,789.11, namely: from the Pacific side of the Union, including a deposit of \$900 from New-Mexico, \$48,989,439.54; and from the

Atlantic States, \$362,349.57.

Since the passage of the act of March 3, 1853, authorizing a reduction in the weight of the silver coinage, there have been issued the following amounts, namely: in 1853, \$8,654,161; in 1854, \$8,619,270; in 1855, \$3,501,245; making a total of \$20,774,676. As few, if any, of these coins have been exported, and but a small amount used in the arts, it will be seen that a large addition has been made to the silver coinage in circulation. The issuing of a few millions more of silver coins may be all that may be required in view of the exclusion of the circulation of silver, and of the small denominations of the gold coinage, in many of the States of the Union, by the use of bank notes of a low denomination. We shall never, it is believed, fully realize the benefits of a sound specie circulation until all bank-notes, at least below the denomination of twenty dollars, shall be excluded from cir-

culation. And it seems well worthy the consideration of Congress, as suggested in the mint report of 1853, whether some provision is not practicable, either by taxation or other efficient means, to remedy the evil in question.

It may be interesting to present, in one view, the entire coinage operations at all the mints and the assay offices since their organization. They are as follows:

| Mint of the United States, Philadelphia, (1793,) | \$377,383,808 | 87 |
|--|---------------|----|
| Branch mint at New-Orleans, (1838,)              | 57,386,665    | 00 |
| Branch mint at Dahlonega, (1838,)                | 5,690,266     |    |
| Branch mint at Charlotte, (1838,)                | 4,222,626     | 50 |
| Branch mint at San Francisco, (1854,)            | 30,853,326    | 64 |
| Assay Office at New-York, (1854,)                |               | 81 |
| Total,   | \$498,866,565 | 82 |

The chief part of this large amount has been received since December, 1848, and is the production of the mines of California, namely: \$313,234,502.77. In a former report some reasons were suggested tending to show that the large amount of gold from California, and that produced from Australia, need excite no apprehensions in regard to any material disturbance in the value of the precious metals; yet it cannot but be apparent that this increase renders it highly important that States and nations should extend the uses of gold and drive out of existence that which circulates in the place of it.

There is one point connected with this subject and with the general management of the national coinage, which, although left by law to the discretion of the director of the mint, and cannot be made the subject of particular legislation, yet is of so much importance to the community generally, that this occasion seems appropriate to give it a fair and general understanding. The thirtieth section of the general mint law—act of January 18, 1837—provides that "in the denominations of coin delivered, the treasurer shall comply with the wishes of the depositor, unless when impracticable or inconvenient to do so; in which case, the denomination of coin shall be designated by the director." In view of the fact that depositors are always paid before their bullion is operated upon, out of a stock of coin previously made ready, it is evident that in the preparation of such a supply of coin the director is to use his discretion in regard to the denomination before conferring with depositors: and they may or may not be exactly suited in the payment. Undoubtedly, in the issue of coins, every proper attention should be given to the probable demand, and especially in the silver coinage, which, it is to be presumed, is wanted for immediate use, and not for storage in vaults. Heretofore, the general practice has been to pay depositors in the coin they have desired, and it is not intended by these observations to give notice that this usage will be entirely abandoned. But the chief design of a national mint is to subserve the interests of the people at large preferably to a few large owners of bullion or coin. The interests of the public and of depositors are not always concurrent in the matter

under discussion. Depositors of large amounts call for coin in a form which gives the least trouble to count; and banking institutions, in addition to that, may prefer it in a form not likely to be drawn out. Many who present their checks at these institutions would, doubtless, ask for specie, but are deterred from doing so by the expectation of securing double eagles instead of half or quarter eagles. In a word, the plain effect of issuing gold coin of a large size is to keep down the circulation of specie and increase the use of paper money. This remark, of course, does not apply to such localities where paper money is prohibited, as, for example, in the State of California, because, in such cases, the different currencies cannot come in conflict.

Before the act of Congress authorizing the issuing of gold in stamped bars, there was, it is true, a necessity for the issuing of large coins, as well to meet the demands for shipment to Europe as, in some measure, to relieve the pressure upon the mint. There was no kind of propriety in going through the manipulations and bearing the expense of making small gold coins, to be directly melted down in foreign mints or refineries. But since the important change in our mint laws, before referred to, a distinction has been made to meet the demands of trade, by which gold intended for exportation is cast into fine bars, while that which is needed for home currency is converted into coin. If we look to the example of the wealthiest and most civilized nations of the globe we shall find that their largest gold coin, to speak in a general way, does not exceed our half eagle in value. Such is the case in Great-Britain, France, Russia, the Netherlands, and other countries. There are pieces of ten thalers—about eight dollars of our money—coined in Germany, but apparently for international use. The same may be said of the American doubloon, of which the amount coined is small. It would no longer be an embarrassment to the principal mint, nor to the branches, except, perhaps, the branch at San Francisco, (and to that institution these views are not intended particularly to apply,) to coin all the gold that is likely to be offered in pieces of five dollars and less. It is true that nearly as much labor is expended in the manufacture of a gold dollar or a quarter eagle as of an eagle or double eagle; and in thus offering to make the smaller denominations a large increase of work is assumed; but this consideration is met by another—that the division of labor, and the present efficiency of the mint establishments, especially when the repairs at the principal mint are fully completed, will enable us to meet such increase without additional expenditures. The manufacture of fine bars at the assay office in New-York, and the coinage of the branch mint at San Francisco, have so divided the work upon gold bullion. as to remove all apprehension of difficulty or delay. In the coinage of half eagles particularly we shall be materially aided by a very remarkable machine lately invented for the final adjustment of the weight of the individual planchets. This instrument was manufactured at Paris, and has been introduced into the mint there, and one of similar powers is also employed in the mint of England. The one imported for the United States mint is adapted to the half eagle only.

It is justly regarded as a triumph of mechanism. It is not by any means assumed that the coinage of the eagle and the double eagle should be discontinued. On the contrary, they will be indispensable at San Francisco; they may, in some emergencies, be required at Philadelphia and at New-Orleans; but, as a general rule adapted to the principal mint and to the branches in the Atlantic States, it is believed that the time has come to return to the smaller denominations of gold coin, issuing almost the whole in pieces not larger than the half eagle; and this, upon the ground already adverted to—particularly applicable to a country so greatly favored with the original production of the precious metal—that the people at large are entitled to a greater portion of real, imperishable money, and that a cardinal point, at which this reform is to be begun or aided, is the place where the gold is put into shape and size for circulation.

The propriety of the organization of a medal office at the mint is respectfully recommended to your consideration. The reasons for this measure heretofore presented need not be repeated here. The frequent calls upon us to strike medals, and to furnish copies of the public medals from the dies which are deposited at the mint, indicate that the establishment of such an office would be of great public benefit. As the statement of the medal dies annexed to my last report did not embrace all that are at the mint, and was in one or two other particulars not precisely accurate, I have caused a more correct list to

be prepared, which is herewith presented.

I also attach to this report several tabular statements, exhibiting the full details of the operations of the mint and its branches, including the assay office, for the past year; also several statistical tables relating to the deposits and coinage of previous years, and showing the States and Territories from whence the precious metals have been received.

I have the honor to be, with great respect, your faithful servant,

JAMES ROSS SNOWDEN,

Director United States Mint.

To the President of the United States.

# Coinage of the United States.

The Annual Report of the Director of the Mint, for the year 1855, has been published by order of Congress, and an order issued for

printing one thousand additional copies for distribution.

The report shows clearly the operation of the parent mint and all the branches, as well as of the assay office at New-York, for the whole year of 1855. It appears that the total coinage for the year was over \$56,000,000; and that the aggregate coinage of the mint and all its branches, (including gold bars,) from the year 1793, has been \$498,866,595.82. The portions executed at the parent mint, and at each branch, have been as follows:

| Mints.                    | Commenced<br>business. | Coinage, 1855.   | Total Coinage,<br>1793 to 1855. |
|---------------------------|------------------------|------------------|---------------------------------|
| Mint U. S., Philadelphia, | 1793                   | \$12,045,952 93  | \$377,383,808 87                |
| Branch, New-Orleans,      | 1838                   | 2,368,500 00     | 57,386,665 <b>00</b>            |
| Branch, Dahlonega,        |                        | 116,778 50       | <b>5</b> ,690,266 <b>00</b>     |
| Branch, Charlotte, N. C., | 1838                   | 217,935 50       | 4,222,626 50                    |
| Branch, San Francisco,    | 1854                   | 21,121,752 43    | <b>80</b> ,853,326 <b>64</b>    |
| Assay Office, N. Y.,      | 1854                   | 1 20,441,813 63  | 23,329,872 81                   |
| Total                     |                        | .\$56,312,732 99 | \$498,866,565 82                |

The domestic production of gold, so far as is indicated by the deposits at the mint, amounts to more than three hundred and twenty-two millions of dollars from the year 1793 to 1855, both inclusive. Of this large sum, the gross product to the end of the year 1848 was little more than thirteen millions of dollars, as is shown by the annexed table. To this aggregate of three hundred and twenty-two millions of dollars should be added several millions as the export from California, via Panama, to Southampton—and also the export to China and elsewhere.

Statement of Gold and Silver, of domestic production, deposited at the Mint and Branches and Assay Office at New-York, from 1804 to the end of 1855.

| Year.                       | Gold.               | Silver.     |
|-----------------------------|---------------------|-------------|
| 1804–1827,                  | \$110,000 00        | • • • • •   |
| 1828–1837,                  |                     | • • • • •   |
| 1838–1847,                  | 7,635,075 00        | 64,482      |
| 1848,                       |                     | 6,191       |
| 1849,                       |                     | 39,112      |
| 1850,                       |                     | 269,253     |
| 1851,                       | W A W . A A A A A A | 389,471     |
| 1852,                       |                     | 404,494     |
| 1853,                       |                     | 417,279     |

The gold mines of North-Carolina are still in working order, with a large outlay of capital for their prosecution; but the average results may be considered as not very profitable to the shareholders.

The total value of the coinage of the United States, from the year 1793 to 1855, both inclusive, has been within a fraction of five hundred liberal parallel.

dred millions, namely:

|                 | Gold.            | Silver.          | Copper.        | Total            |
|-----------------|------------------|------------------|----------------|------------------|
| Philadelphia    | \$295,371,582 66 | \$80,440,029 90  | \$1,572,196 31 | \$377,383,808 87 |
| San Francisco,  |                  |                  |                | 30,853,326 64    |

The reduced coinage at Philadelphia for the past year is accounted for by the unavoidable delays in the repairs at the mint, authorized by an appropriation made by Congress for this purpose in 1855. These repairs and alterations were commenced 19th July last, and occupied six months.

It will appear from this tabular view that the branch mints at New-Orleans, Dahlonega, and Charlotte, could be advantageously dispensed with. The gold coinage last year at New-Orleans was only \$450,500, and the silver, \$1,918,000. All this could have been done at Philadelphia; and now that the parent mint is provided with new and improved machinery, all the silver coinage may as well be done at that point.

It appears that the annual coinage at the Georgia and North-Carolina branches is less than the years 1848–1853—having declined from \$900,000 in 1852, to 333,000 in 1855. According to a report made by Mr. J. Phillips Phenix, of the Committee on Commerce, to the House of Representatives, in September 1850, when the coinage at these two branches was double what it is now, the expense of coinage was estimated as follows:

| At Philadelphia, | 2.23 per cent. |
|------------------|----------------|
| At New-Orleans   | 6.68 "         |
| At Charlotte     | 9.00 "         |
| At Dahlonega     | 9.97 "         |

At this time, the per centage at the branch mints must be greater, as the work is less. Every dollar coined at the Charlotte and Dahlonega, probably costs ten cents; whereas the raw material could be transported, at a small cost, to Philadelphia or New-York. The annual expense of thirty or forty thousand dollars for the maintenance of these two mints could well be dispensed with, and the coinage executed at Philadelphia and New-York. In fact, the heavy expense incurred by the government for the support of the mint at New-Orleans is entirely superfluous. The receipts of gold at that quarter are now too small to require the further working of a mint there.

The Director of the Mint, in his report recently made, alludes to recent improvements in machinery which are calculated to facilitate coinage operations, and to produce more highly finished pieces, namely: "In the coinage of half eagles particularly, we shall be materially aided by a very remarkable machine lately invented. \* This machine was manufactured at Paris, and has been introduced into the mint there, and one of similar powers is also employed in the mint of England. The one imported for the United States mint is adapted to the half eagle only. It is justly regarded as a triumph of mechanism."

The largely increased production of gold in Australia and California, of late years, has of course stimulated the workings of the mints of foreign countries. The coinage may be fairly estimated at about two hundred millions of dollars annually in gold, fifty millions in silver, and nearly one million in copper. We find the annexed summary of foreign coinage for the year 1853, the latest, to which we add that of the United States for the same year, all reduced to sterling:

Summary of the Coinage of various Mints throughout the world in the year 1853.

|               | Gold.       | Bilver.    | Copper.   | Total,      |

| Totals        | £37.400.700 | £9.594.869 | £165.081  | £47.130.650 |

The act of Congress to create new silver coins and to reduce the weight of the old denominations, has had a good effect in providing the country with an abundance of the small coins, and the new act passed by the Senate a few weeks since, if assented to by the House of Representatives, will have the effect to drive out of circulation the old and depreciated Spanish coins that have for many years been in use.

With the aid of the twenty millions of dollars in small silver coins executed since the act of March 3, 1853, and the coinage of two or three millions more annually, for the next few years, the country

will be liberally provided with small silver coins, that will not only enter into general circulation and effect the purposes intended, but they will not be liable to be used for the arts and manufactures, their legal value being about ten per cent beyond that of their intrinsic value as metal.

According to a careful table prepared for the Augsburg Allgemeine Zeitung, published April 16, 1856, the following table will show the amount of gold and silver that has been extracted during various periods from the birth of Christ down to the year 1855:

|      |        |    |       | Gold, Kilo. | Silv <b>er</b> , Kilo. | Value, France. | Value, Dollars. |
|------|--------|----|-------|-------------|------------------------|----------------|-----------------|
| Fron | a A.D. | to | 1492, | . 6,123,711 | 18,662,107             | 28,459,000,000 | 4,691,800,000   |

# NOTES ON THE HISTORY OF THE ENGLISH COINAGE.

# BY PROPESSOR A. DE MORGAN,

OF UNIVERSITY COLLEGE, LONDON.

The discussions which have taken place on the decimal coinage give a present interest to the history of our coinage in general, and will

justify us in putting together a few notes on the subject.

The most complete work on the coinage is the Annals, etc., by the Rev. Roger Ruding, (London, 1817, 3 vols., 4to, and Suppl. 1819.) Next to this comes the Historical Account, etc., by Stephen Martin Leake (London, 1726, 1745, 1793, 8vo.) Camden's Remains (1605 and various other editions, 4to) contain a chapter on Money which has been much quoted: the same may be said of Bishop Nicolson's English Historical Library. Further references may be found in Ruding, Leake, Nicolson, and the Penny Cyclopædia, art. Coinage. A good popular book on the coinage is much wanted, which shall properly combine numismatics—coins considered as historical monuments—with the monetary history of the nation.

A coin is a certain amount of precious metal, with the State mark upon it as a guarantee for weight and quality. In no coinage is it more necessary to remember this definition than in our own, in which, originally and for a long period, large sums were left to be weighed, and coinage was but a convenience for avoiding the trouble of weighing smaller sums. The Saxons and the early Normans coined only silver, and of this nothing higher than the penny. The Saxons had gold bizants or bezants, but these were coined at Constantinople, (Byzan-In the early Norman times, Italian, Flemish and Jewish money-lenders brought foreign gold into the country. But it must be remembered that up to the time of Edward III. (excepting only the gold penny of Henry III., meant for twenty silver pence, and probably not circulated) there was no coinage of gold by an English sovereign. Pence, halfpence, and farthings, in silver, formed the national currency for money counted and not weighed. When Edward I. coined fourpences, they were called groats or great coins; but this coin did not become generally current till the time of Edward The Saxons had copper coins of eight to the penny; but no copper was coinced after the Conquest, as a national coin, until the time of James I. Copper was considered a base metal—a kind of token: a copper halfpenny struck, but not circulated, in the reign of Elizaboth bears, not the word halfpenny, but the words pledge of a halfpenny; even King James's farthings were considered as tokens.

A look at the time of Richard I., in the novel of *Ivanhoe*, will illustrate what we have said. The knights ransom their armor in zecchins:

the zecchin was an Italian gold coin, introduced by the Italian moneylenders. The readers of the Arabian Nights know it as the sequin. The Jew and the Abbot ransom themselves from Robin Hood in crowns, French or Flemish, (for there was no such English coin,) and probably gold. The baron who proposes to torture the Jew out of a thousand pounds of silver, produces his scales, and demands Tower weight. He offers to take a mark of gold for each six pounds of silver, the regular terms of the day: this again was weight, for the mark was never a coin, at any time, but only two thirds of a pound. So far we have no fault to find. But when Prince John offers the archer twenty nobles, we may ask where the Prince was to find either the name or the coin. When he proposes to fill the horn with "silver pennies," we can imagine the yeoman wondering what choice of pence his Highness could possibly have, except silver ones. When the Saxon peasant grumbles at the Jews for not flinging him "a mancus or two," he was more unreasonable than Sir Walter meant him to be: for the old Saxon mancus, mancusa, or manca, never was a coin, but only a money of account in the books, and a number of pence in payment; to say nothing of the bearer of a letter complaining that the receiver did not pay him the price of a small flock of sheep for his

Many readers will be surprised to hear that the early Normans coined nothing higher than a penny: but they ought to be more surprised that the same kings coined nothing lower than a farthing. The price of a sheep was fourpence: at least this was the price at which the king's purveyors compounded for a sheep, when they demanded one; perhaps we may more safely put the market price at sixpence. How should we get on in our day, if we had no coin smaller than would buy the twenty-fourth part of a sheep fit for the Queen's table? The probable explanation is that the lower orders had very little to do with money; they were serfs who were fed and clothed by their masters.

The mark, as we have said, never was a coin: and yet no name is more common in English monetary language. The prince's ransom, and the forester's bet upon his skill in archery, are equally in marks. A mark of silver might be counted in pence, or in foreign crowns, but the name was essentially descriptive of a weight. Thus it is no surprise to read that the duke who made a captive of Richard I. received the ransom in marks, of which he offered a portion to the Cistercians to make—not to buy—censers for their chapel services: an offer which the Cistercians refused, in contempt for the man who had taken so unfair an advantage of a brother crusader.

It seems to have been an early principle that the great "valuers" of money should never be coins. These valuers were the shilling, a weight of the twentieth of a pound; the mark, a weight of two thirds of a pound; and the pound, which was at last our pound troy, but which at first was perhaps the tower pound, three quarters of an ounce less than the pound troy. This troy pound, as every one knows, is of twelve ounces, each ounce having twenty pence, each penny, latter-

ly at least, twenty-four grains. We say pence, not pennyweights, as now, for the penny was a weight; and we find such expressions as eleven ounces twopence farthing, meaning eleven ounces two pennyweights and a quarter of our modern phraseology. The word pound has never been the name of a coin. The 20s. pieces of James and Charles were laureats and caroluses: that of George III. is a sovereign. To this day we think of the coin as a sovereign, of the debt it wipes out as a pound. In like manner the shilling was never any thing but the twentieth of a pound weight of silver until Henry VII. coined a few shillings, and Henry VIII. circulated this coin extensively. But the name did not come in at once with the coin. That which is now the shilling was the groat of twelve pence, and the testoon, when first it

appeared as a coin.

When the gold coinage was introduced, there was wisdom in not attempting to coin an equivalent to twenty shillings. Both gold and silver were in the standard currency, and both were legal tender to any amount. While the relative values of the two metals were changing, it would have been impossible to preserve any gold coin in a state of equivalence to twenty shillings of silver. Our present silver coins\* are only tokens, and pass for more than their value, as compared with gold; care is taken that it shall never be worth while to melt the silver coin into bullion. A coin passing for something very near 20s. the pound of account, would have been a serious inconvenience, especially if it had fluctuated, being alternately above and below the pound of account. No wise legislature will ever knowingly introduce into monetary arithmetic the necessity of adjustments which are sometimes additive and sometimes subtractive. Astronomers, many at least, have learned the convenience of keeping the observatory clocks slow enough to insure the corrections necessary for true time being always additive. If, as has been proposed by some, a tenpenny coin were introduced, for the purpose of assimilation to the French franc, now 94d. and a fraction, such a fluctuation in

<sup>\*</sup>A shilling only differs from a promise to pay a shilling in being of a more costly material than promises are usually written on. This costliness is the means of preventing forgery: the promise of government to receive the token at a shilling is signified on what is so nearly worth a shilling, that imitation could not be done at a sufficient profit. Thus the government will receive back its token, no matter how much worn or battered it may be, provided only so much of it hang together as to make it certain that no other part of it is circulating as another token. But gold circulates, in another character, on its value as a commodity. Hence the necessity of government receiving it at value on its return to the Mint, and making a deduction for loss of weight. Many persons do not understand the distinction, and imagine that their loss upon the light gold is a hardship, because there is no loss on the light silver. Hardship or no hardship, the two cases are perfectly different. To make deduction for a light shilling would be much the same thing in the Mint, as it would be in the Bank to make deduction from a 5l. note on account of stains, or crumpling, or tearing. Our silver is not money. Nobody is bound to take 45s. of it in payment of 2l. 5s. It cannot be legally tendered in sums of more than 40s.; and its meaning is, that the Mint will pay a gold sovereign for every 20s. of it, just as the Bank will pay five sovereigns for every one of its written promises called five-pound notes.

the exchanges as should throw the franc alternately above and below the 10d., would be the great arithmetical nuisance of its century, to all who should be concerned.

It appears from what has preceded, that up to the time of Edward III. the English currency was silver, all the gold in use as coin being foreign: that large sums of money were weighed, not counted, the pound of silver being the chief unit, though hardly better known than the mark, or two thirds of a pound: that the coinage was entirely of pence, halfpence, and farthings; so that coinage was no more than a convenience for preventing the constant weighing of small sums. It is further said that the cross, which was always marked upon the reverse of the penny, was used to facilitate the fracture of the piece into four farthings; but it is a matter of discussion whether this was really done to any extent. The occurrence of the cross on the small money gave rise to the description of extreme poverty conveyed in "He has not a cross to bless himself with."

From a very early period, the English coinage was called sterling, a name by which it has been known throughout the world. It is also obvious that by this name came to be signified the superior soundness and good faith of the English coinage; from which, as an adjective, it has come to stand for that which can be fully depended on. The account of the origin of this word which the antiquaries prefer, is as follows: That in or before the time of Richard I., money coined in the east of Germany began to be in request in England for its purity, and was called Easterling money, those Germans being called Easterlings; that shortly afterwards some of their best coiners were sent for into England, and that from that time the money was called Easterling and sterling. Another account derives the word sterling, esterling, or starling, (as according to Spelman it was sometimes written,) from the little stars which were frequently on the English penny, and which were almost universal in the pence of the time at which the English coinage began to be of high reputation. In our minds there is no doubt that the second is the true derivation, for which opinion we proceed to give reasons.

In the first place, the word sterling or esterling meant a penny, not coin in general, but the 240th part of a pound. By statutes of Henry III. and Edward I., the English penny, which is called a sterling, (qui vocatur sterlingus,) shall weigh, etc., etc. By an ordinance of Henry III., his French subjects must pay two pence each, his English subjects one sterling each. By an ordinance of Henry III., every sterling which is under weight is to be melted. Richard II. gives the King of Scotland, not tria millia librarum sterlingarum, 3000 pounds sterling, but tria millia librarum sterlingorum, 3000 pounds of sterlings. This same idiom occurs frequently, namely, a case inflexion which proves that sterlingus is a substantive, and not an adjective expressing quality. Nor was it an English substantive only. A Cologne ordinance prescribes that 20 sterlings shall weigh an ounce. David I. of Scotland, who reigned before coiners were ever said to have come from the east into England, ordains that the sterling shall weigh 32 grains of wheat. And David II. ordains that "our money, that is to say sterlings

(moneta nostra, videlicet sterlingi,) shall not be carried out of the kingdom." We might multiply testimonies of this kind: those we have cited are all in Ducange, (at the word Esterlingus,) with proper references, except the 3000 millia, etc., which is from a charter in Hoveden. So late as Henry V., the word sterling meant a penny; for in the last year of Henry IV., there is a proclamation against Venetian pence, of which it is said that three or four are hardly equal to one sterling, (Ruding.) We may also note, that in becoming the name of a coin, the word sterling also became the name of a weight. An old explanation of the purity of the silver of the time of Edward I., (Camden,) states that eleven ounces two easterlings and one ferling [farthing] should be silver, and the rest alloy. The next paragraph refers to this as eleven ounces and two pence ferling.

But if the word sterling mean the little-star coin, how comes it to be esterling in at least half the mentions of the word, and, specially, in all the French records without fail? How come the French to be more addicted than the English to that part of the word which, if the syllable mean east, does not belong to their own language? In this way, we think: the old French for star is Estelle, a form which they still keep as a female name, and from which they get the modern étoile. The r in Esterlin comes from the English, we suppose, but they do not always use it. In an old French ordinance it is said that Chaque Estellin doit pezer 3 oboles Tournois, (Ducange.) And the same writer cites an old French romance, in words which we leave the reader to decipher:

Més je ne suie mie venus En cest pais ô tant escus, Et pour ses estellins recevoir, Més pour la terre tout avoir."

From the time of the Saxons it had been customary to put on the reverse of the penny small birds, fleur-de-lys, studs, annulets, stars, etc. The same usage also prevailed elsewhere. The penny with simple round studs or buttons, which might be looked upon as stars, became exceedingly common about the time of Henry II. and Richard I. The great reformer of the coinage was Henry II. "This king," says Leake, "seems to have been the first, from the Conquest, that made any considerable regulations for money affairs." One of his pence has stars before the bust of the sovereign. We cannot pretend to determine what particular stars, and whether on head or tail, they were which brought the term sterling into use; nor even whether, as we think likely, the term is older English than has been supposed, as it certainly was older Scotch. What seems to us certain is this, that the word is derived from star, and not from eastern. This has been the opinion of a minority among the writers, Polydore Vergil, for instance, in older times, and Bishop Nicolson in more modern times.

It is certain that the Germans were called Easterlings and Osterlings. It is certain, also, that one German, Otho, surnamed Cuneator, or, The Coiner, was largely employed in England. We have no evidence of any other person from the east being so employed. Bishop Nicolson affirms that the Prussians and other neighbors of the Baltic

who are the nations described as Easterlings, had not themselves any silver coin till the 13th century, a period too late for the hypothesis; for which assertion he cites what seems good authority. It is plain enough that the confusion between the two meanings of esterling is of an early date; an old monk of St. Edmondsbury (Ruding) defends the common idea by reminding his readers that, in later times, certain gold coins, though English, were called Florentines, (shortened into florins,) because the coiner employed was an Italian from Florence. This old monk, Walter de Pinchbeck, may have been the originator of the theory, and the Florentine derivation may have been the means of suggestion.

In all matters of probable reasoning, but especially in etymology, it is to be remembered that a fair percentage of results are such as become, in course of time, highly improbable. The thinker who, as he ought to do, always adopts the most probable conclusion, must make up his mind to be wrong in a certain minority of his cases. A test for determining the circumstances under which the improbable is to be preferred to the probable would be worth, to the human race, the next ten great results of science or observation, even though some things as great as vaccination, railroads, and telegraphs, were to be among them. We can imagine that, a hundred years hence, the buss, as it will then be universally called, which runs along the streets, will be undoubtedly set down as the old English word buss (from the same root as box), meaning any large vehicle, as in the boat (a kindred word) called the herring-buss. Who would hear without laughter the proposal to deduce the word from the last syllable of omnibus, a term derived from carriages open to all, introduced in 1829 from France? What! people would say, do you mean that public carriages were not open to all before these long boxes came into use? Here truth would have to walk off under a cloud of improbability, as she is often obliged to do. The derivation of esterling, which we here reject, is not rejected because it is improbable—for we consider it probable enough à priori—but because we think we see direct evidence in favor of another derivation.

The English coinage, subsequent to the Norman invasion, may be divided into four stages. In the first, lasting till Edward III., and of which we have already spoken, large sums were paid by weight, and small coins served for small transactions. In this stage silver was the only national coinage, of this no coin was higher than the penny, and all the gold in use, as coin, was from abroad. Gold went by weight, at nine times the value of silver. In the second stage, lasting until the time of Henry VIII., a gold national coinage was gradually introduced, and going down, as we shall see, to rather small sums; the great of fourpence was introduced, and remained throughout the period the highest silver coin. In the third stage, lasting till the time when Newton ruled the Mint, gold coins were greatly multiplied, and higher silver was coined. Gold of much antiquity, and very much clipped, was current at the end of this period, rather by weight than by nominal value. In the fourth period, lasting till our own time, the variety of coins has been considerably diminished, and much approach has been made towards the simplicity of a good system. The estab-

lishment of one standard, gold, first by the practical effect of Mint regulations, and afterwards by law, has abolished the greatest source of the confusion of old times, and has turned the idea of money which does not pass for its nominal value into a tradition, or else into a notion attached to paper promises not convertible into gold on demand.

The attempt at a double coinage, with two distinct standards, which lasted till nearly our own time, resulted in a never-ending variation of the value of gold as compared with silver. To this must be joined the gradual depreciation of the silver coin. The pennies of William I. to Henry III. give 11. of money in a pound of silver; the shillings of our day, with the same alloy, give 61. 6s. to the pound of silver; and to this we have come gradually. As to the gold, even after allowing for the changes requisite to meet the depreciation of the silver, there is a large variation, due partly to fluctuations of relative value, partly to the exigencies of the times. The florins of Edward III. gave 15% of money to the pound of gold; the nobles of Edward IV. gave 221. 10s. Henry VIII coined, at different periods, sovereigns of 271., 281. 16s., and 30l., to the pound of gold; Edward VI. of 34l., 28l. 16s., 36l., 33l. The gold coins were in circulation at odd farthings a piece; and these values in a state of fluctuation. The consequence must have been, a perpetual adjustment of transactions to the state of the money. the day we write this, we see in Notes and Queries an extract from church-wardens' accounts of 1551, in which they twice credit themselves "in allowance at the fall of the money." In many ways it appears that money was a commodity, to be valued like other commodities, and not a measure of value, of which the receiver only inquires whether it be *good*, that is, really issued by the government.

The work on Arithmetic of Robert Recorde, first published in 1540, about the end of our second period, gives the following as the state of the actual coinage. It is taken from the edition of 1561, the earliest we ever met with, and John Dee, the editor, does not think it necessary

to make any remark. The spelling is here modernized.

# GOLD COINS.

|                   | £.  | s. | d. |                    | <b>s</b> . | d, |
|-------------------|-----|----|----|--------------------|------------|----|
| Sovereign,        | . 1 | 2  | 6  | Half Angel,        | 3          | 9  |
| Half Sovereign,   |     |    |    | George Noble,      | 6          | 8  |
| Royal,            |     |    |    | Half George Noble, | 3          | 4  |
| Half-Royal,       |     |    |    | Quarter Noble,     | 1          | 8  |
|                   |     |    |    | Crown,             | 5          | 0  |
| Old Noble (Henry) | 0   | 10 | 0  | Half-Crown,        |            |    |
| Half Old Noble.   | . 0 | 5  | 0  | Another Crown,     |            |    |
| Angel             |     |    |    | ,                  |            |    |

The only difference between the two crowns lay in the first having a rose over the crown, while the second had four fleur-de-lys round it.

### SILVER COINS.

|                   | ₫.   |            |
|-------------------|------|------------|
| Groat,            | 4    | Penny      |
| Harp Groat.       | 3    | Halfpenny. |
| Penny of 2 pence, | •••• | Farthing.  |
| Dandiprat,        | 11   | Laithing.  |

The farthing was only distinguishable from the halfpenny, to many persons, by a cross on one side and a portcullis on the other.

In his edition of 1573, John Dee repeats this table as that of 1540, and says that the coins of 1570 are very different, meaning that various additions and subtractions had been made. He announces a new table at the end of the book, but he either forgot it, or, which is more likely, he found it a harder task than he had supposed to collect and value all the coins in use. Even Recorde himself only professes to give the coins which were most common. The remaining arithmetical authors of the sixteenth century do not attempt a list of coins.

In the editions following 1630, the editors have given a list of the most usual gold coins, and of the silver coins, agreeably to the proclamation of November 23, 1611. The gold is as in the following table, and the silver is described as consisting of the Edward crown, half crown, shilling, half shilling, and threepence; the Philip and Mary shilling and half shilling; the Mary groat and twopence; the Elizabeth shilling, ninepence, sixpence, fourpence, threepence, twopence, penny, three farthings, and halfpenny.

It will easily appear that the counting of money, even in 1540, must have been beyond the power of most, by our usual process of taking coin after coin in the hand. In 1540, a parcel of half and quarter royals, half sovereigns, etc., with some of each of the two kinds of crowns, would have been a payment requiring writing to make up the total. Whether we take the first period, the second, or the third, we see the reason of the old law which requires the tenant to tender his rent to the landlord at such time before sunset as would leave time to count the money by daylight.

It is evident that by this time our coinage had assumed the character which it now bears; namely, that the gold part of it very much exceeded the silver in value. We must remark the smallness at which the gold coin had arrived: and the value was still further lowered before the end of the century, by wear and by clipping. Small gold coin is an expensive article. It presents a larger surface in proportion

to its bulk than the larger coins, and has a much greater wear and tear. Our half sovereign is a costly convenience. No gold coin has ever given long satisfaction, since the *mechanics* of coinage has been understood, which is either very much greater or very much less than the sovereign which we have now.

The confusion of the gold coinage was increased by wear, by fraud, by new coins, and by the lowering of the silver, until it reached its highest point in the last quarter of the seventeenth century. The silver coinage had by that time arrived at a deplorable pitch of badness. The great reformation projected by Charles Montague, afterwards Lord Halifax, and carried into effect under his administration by Isaac Newton, was completed in 1699. The history of this magnificent operation has not been properly written by the historians of the coinage, whose attention has been too much engrossed by questions of head and tail. Even the records of the Mint are far from sufficient on this important point. We know that the main body of the imperfect gold was called in, though some of the old caroluses and jacobuses were in circulation for nearly fifty years afterwards; we know also that the silver was thoroughly and radically reformed. Had Newton possessed less fame in other things, his biographers would have given us a little more ao count of an operation which would have been a lasting reputation to any one else; for private biography frequently amplifies public records. But it has been Newton's fate to have his career in the public service not only thrown into the shade, but its origin attributed to any cause but the right one. With some, it was attributed to Montague's regard for Newton's beautiful niece, Catherine Barton, whom it is hardly possible Montague could have set eyes on when Newton received his first appointment. With others, it is a reward for scientific services, and an acknowledgment of genius almost divine. There has always been a school of British philosophers who ecstasize when they think of the chief of their body gaining an office of 600l, a year, accomplishing a harder task than had ever been laid upon any holder of the same office, rising in consequence to a higher post of 1500l., and finally gaining a knighthood! With all this science had nothing to do, further than common arithmetic and common chemistry. Montague had sat with Newton in the Convention Parliament, and had had ample means of testing his friend's qualities as a man of business. The operation he projected on the coinage was one of unheard-of difficulty, and many prophesied that it would fail altogether, more, that it would ruin commerce. He therefore secured the strongest scientific assistance he could find, and enlisted Locke, Halley, and Newton in the cause. He could not have stood the risk of any incompetent supporters; for his administrative power depended neither on wealth nor influence, and, though of noble family, he was long called and considered the parvenu of political power. And he tried Newton's price like a prudent minister. The hook was first baited with the third-rate office of comptroller, and when it was found this would not do, with the second-rate office of warden.

The coinage had reached the state of complication now to be described by the time of the Restoration. At this period it was all aug-

mented by proclamation. The following table was collected by William Jeake in 1674, in his "Λογιστκηλογία, or Arithmetick Surveighed and Reviewed," which was published by his son in 1696, the year of Newton's appointment. It was copied into Harris's "Lexicon Technicium" in 1704, which shows that the necessity for such a table was not then quite obsolete.

This table shows the values of the coins in 1640, and also after the proclamation. Even Jeake does not profess to give all the gold coins, but only most of them. Perhaps the remainder consisted mostly of those foreign gold coins which were settled by another proclamation of the same year.

We have given these lists at length because we cannot find in the annalists of the coinage any table of coins current at one time. It would be difficult to collect such tables from contemporary historical documents: and probably it did not strike the writers to whom we have alluded that books of arithmetic are the proper quarters in which to search. There are curious indications of the absence of communion between the numismatists and the arithmeticians. Camden states that Henry VIII. is said to have coined a piece called a dandiprat, but he does not know its value: Leake, and Ruding (we believe, but we do not speak so confidently about Ruding's three quartos as about Leake's single octavo) are content to give the same information, without any knowledge of the value of the coin. Our reader has seen it, as three half-pence, in Recorde's list: he will also notice that this coin disappears in the list of 1630, probably omitted by mistake, and reappears again, and as a coin of Elizabeth, in the list of 1674.

The reader will naturally ask what the new coinage was, which was started by Newton, and which must be presumed to be the basis of our present coinage. On this history says nothing, and the records of the Mint emphatically say nothing, for they are complete enough on every other point. The truth is to be inferred from lists of coins. There was no new coinage, that is, there was no new invention of pieces. As to the current work of the Mint, a sufficient reform had long taken place. From the time of Charles II. the issue of gold pieces had consisted of five-pound pieces, double guineas, guineas, and half-guineas: that of silver pieces had consisted of crowns, half-crowns, shillings, sixpences, groats, threepences, two pences, and pence. This

issue was continued; and the only piece which Newton added was the quarter-guinea of 1718, which was soon found, inconveniently small, though it remained till the last quarter of the century. A gold coin passing at an odd number of pence over shillings must have been a great inconvenience.

We suppose that the five-pound pieces afterwards passed at five guineas. Various foreign gold coins, principally Portuguese, called *Portugal pieces*, came into use in the last century, so that the list of gold pieces in and about 1770 will remind us of the time of Robert Recorde. It is as follows, the less usual coins being in italics:

| 4.                        | 4          |                     | £ | 4, | đ. |
|---------------------------|------------|---------------------|---|----|----|
| Sixteenth of a Moidore, 1 | 81         | Guines,             | 1 | 1  | 0  |
| Eighth of a Moidore, 3    |            | Moidore,            | 1 | 7  | 0  |
| Eighth of a Johannes 4    | 6          | Johannes,           | 1 | 16 | 0  |
| Quarter-Guinea, 5         | 3          | Two-Guinea Piece,   | 2 | 2  | 0  |
| Quarter-Moidore, 6        | <b>9</b> ′ | 21 Moidore Piece,   | 3 | 7  | 6  |
| Quarter-Johannes, 9       | 0          | Double Johannes,    | 3 | 12 | 0  |
| Half-Guinea 10            | 6          | Five-Guinea Piece,  | 5 | 5  | 0  |
| Half-Moidore,             | 6          | Five-Moidore Piece, |   |    |    |
| Half-Johannes             | 0          | •                   |   |    |    |

The re-coinage of silver completed in 1699 amounted to nearly seven millions of money. It was probably not a very good specimen of the art, and it was done under a high pressure of necessity. The coin was soon worn on the faces, and bent. John Philips wrote his poem The Splendid Shilling, in 1703, while the new coinage was yet sound and Bramston's imitation, The Crooked Sixpence, was written some years before 1744, and the title indicates that a fair proportion of the sixpences had become bent. At the beginning of the reign of George III. the shillings and sixpences had become, in every thing but their extreme thinness, those little white plates which so many can remember to have circulated in 1815. But at that period the silver coin had become even more of a token than it was in 1699: and the extension and uniformity of the gold coinage, combined with the use of paper-money, and the addition of the mechanism of the Bank of England to that of the Mint, had placed the monetary system of the country on a footing of convenience wholly unknown at the Revolution. Still, the re-coinage of 1816 was a large measure, requiring a great deal of administrative forethought.

This re-coinage of 1816 brought our system, except only as disturbed by circulation of foreign pieces, to its present state of simplicity, by the substitution of the sovereign for the guinea. It is very much to be doubted whether either the government or the nation would listen to any scheme of decimal coinage which requires so great an operation as the re-modelling of all the silver at once. Fortunately, though not so generally understood as it ought to be, the scheme which divides the pound into 1000 new farthings, or mils, requires no immediate recall of any portion whatsoever of the coinage. If, by Act of Parliament, (which would probably be thought necessary, though the Royal prerogative extends so far by itself,) the half-shilling

were made to contain twenty-five\* farthings instead of twenty-four, the whole of the system would be established, and the commercial classes, and all who keep books, might be safely trusted to find their way to reckoning in pounds, tenths of pounds or florins, hundredths of pounds or cents of ten farthings each, and thousandths of pounds or new farthings, or mils, if that name be preferred. The calling in of the crowns, half-crowns, fourpenny and threepenny pieces need not take place: it would be enough that those which come in should not be allowed to go out again. The half-crowns, in particular, come into the Bank in enormous numbers while the harvest is growing, and go out again as the time of reaping approaches: they might be arrested, and florins and sixpences might take their places. If a little exertion were made to help in the coins which are not to go out again, it would be so much the better: but this is not a matter of primary necessity. The issue of silver cents, (of ten farthings or mils each,) might take place at leisure: and the same with such other coins as should be judged desirable.

The two schemes which have found advocates, in opposition to the retention of the present pound and florin—for which an enormous preponderance of opinion has been declared—are based upon the farthing and the penny. The effects which these systems would have upon the

coinage are as follows:

The farthing system would require coins of 10, 100, and 1000 farthings; a cent of  $2\frac{1}{2}d$ . present money, a florin of 2s. 1d. present money, and a pound of 1l. 0s. 10d. present money. Either a complete alteration of all the gold and silver coinage must take place, or the decimal coinage cannot exist, and decimal computation will be but an option, such as people have now if they choose. For there is nothing to hinder any one from using what mode of keeping books he pleases, provided only that he take the trouble to translate his receipts into his own system for himself, and his payments into the common system for his neighbor. But decimal reckoning will never prevail against non-decimal currency.

The penny system would require a small coin of one tenth of a penny; though its advocates seem to incline towards preserving the farthing for the poorer classes, and making the decimalization ascend upwards from the penny. This would require a coin of 10d., say a franc, and one of 100d. or 8s. 4d., say an imperial. The inconvenience

† The reason is that a reaper's wages are almost always half a crown a day. The coin is then very convenient for payment, but it must have a tendency to cause a very great want of smaller change. A paymaster, with a box of florins and another of sixpences, might pay half-crowns nearly as easily as if he had single pieces; and the superior convenient both the mode of payment would be manifest the moment

the money had changed hands.

<sup>\*</sup>This article being entirely on coinage, we say nothing about the injustice of damaging those who have sixpence of copper money to the extent of a farthing once in their lives. Many persons have a horror of this spoliation. We heard a minister say as follows to a deputation: "When a poor man has sixpence in his pocket, he will have to say to himself, 'Now I have to go and work before I can make this into a silver sixpence.'" We doubt whether there be in the whole of Great Britain a laboring man who ever imagined to himself a farthing's worth of work, or took the trouble to form a notion of the time it would last.

of such a coin as the imperial, decidedly as much too large for silver as it is too small for gold, strikes every one who approaches this subject. This penny system, like the farthing one, requires the complete alteration of all our coinage, both gold and silver, except the half-crown, which becomes a three-franc piece, and the crown, the reproach of our present coinage, which becomes a six-franc piece.

We have seen, in ancient times, such a confusion as that of two small gold crowns, of the same size and different values, distinguishable only by the difference between a rose and a fleur-de-lys. We have seen this same kind of confusion carried to a much greater extent. inasmuch that there existed at one time, of English coins only, more than fifty in circulation, many of them undistinguishable in size and of different values. We do not read that this complexity gave rise to any complaint; it had come on gradually, people were used to it, and probably thought that the time and trouble which their money cost them were necessarily incidental to money affairs. If any thinking man had proposed simplicity for the sake of saving time and trouble, who can doubt that he would have been a person not used to the details of business, not a practical man, and so forth. Any banker would readily admit that the monetary system of 1674 would, if it existed in our day, require three times as many clerks as are now wanted. And yet, in such accounts as we have seen of the debate on the coinage, when Montague (afterwards Lord Halifax) proposed his measure, there is not a word about the multifarious character of the coins, and the difficulties thence arising. If all the packet of coinage which Jeake has recorded, had been sound and unclipped, we have no reason to suppose that a voice would have been raised against it.

The state of things now existing is very different. The introduction of the florin, by the side of the half-crown, has been the subject of much remark, as to the liability of confusion, though there is some distinction in every point to which people must look. The introduction of the threepenny piece by the side of the fourpenny, involving the trouble of looking at the edge of the coin, has been considered a grievance by the bankers, and justly, in comparison with the distinctions between other coins. It is hardly to be supposed that much of this backward progress would be tolerated: and yet we are not without propositions the adoption of which would make the whole of our coinage, for a good many years at least, an imitation of that which formerly existed.

It has been proposed that, the sovereign remaining as now, a gold piece of the value of tenpence more should circulate with it. This would be a luxury in a dark London morning; for 1l. and 1l. 0s. 10d. in gold would be undistinguishable by size, and the banker's clerk would need to read every piece of gold he receives; unless, indeed, the new coin were made thinner and broader, which would very much increase its wear. Again, it has been proposed that the coins of the penny system, the franc (10d.) and the gold imperial (8s. 4d.) should circulate with our present coinage. The difficulties of distinction would here be thrown upon the franc and the shilling, as well as upon the imperial and the half-sovereign. But there would be a greater incon-

venience even than this. Suppose a person were to hand over in payment 2 sovereigns, 3 half-sovereigns, 5 imperials, 6 shillings, and 7 francs. The receiver would have to cast this up in his own way. There is an option in this coinage: a person may either use the present system, or the decimal system of the penny. One party might be expecting 6l. 3s. 6d., the other might bring it in as 14 imperials, 8 francs, and 2 pence. Against such a mixture it seems to us needless to argue.

The proposers of the farthing and penny systems seem to have started with the impression that their opponents, the advocates of the scheme approved by the House of Commons, the Bank of England, etc., intended an alteration of all the silver coinage. Hence they were under no difficulty in proposing an alteration of their own. When they came to understand how easily the existing silver coinage may remain under the system voted by the House, all desirable alterations being made at perfect leisure, and in convenient time, they were under the necessity of contriving the adaptation of a similar convenience to their own systems. Hence arose their plan of two different and concurrent coinages; a plan which we are satisfied will, independently of other disadvantages, drive their proposals out of the field the moment they come to be examined in detail by the side of the plan which

divides the pound into 1000 new farthings.

Since the time when gold and silver passed by weight as well as by coinage, the two, and only two, actions upon the whole of the coinage at once, have been adopted under the spur of necessity. In the time of William III., the gold had ceased to represent any thing like its value, from clipping and wear. It is said that five pounds of coined money was intrinsically scarce worth forty shillings. As to the silver, it was common to sell bullion for 6s. 3d. an ounce of the common coin, and for 5s. 2d. of good and new coin; so that even the silver coinage passed at varieties of value. And yet this evil had been endured for many years, and no minister had dared to face it. In the reign of George III., it may almost be supposed that the government, not daring to attempt a complete re-coinage, would not venture to put out any new shillings, etc., which might bring the old ones into discredit. Small silver was struck in 1763, 1764, 1775, 1778, and 1787; but not enough to be put into general circulation. The consequence was, that honest illegal coining made a very good livelishood: little silver plates, exactly resembling government shillings and sixpences, and quite as valuable, were supplied by "private enterprise." It is stated that the value of the counterfeit shillings was 281d.; the genuine shillings, as worn, could have been worth but little more. The continuer of Leake says, in 1798, that "few, very few indeed, of the shillings and sixpences now in use, appear ever to have been legally coined." The coiners evaded the law by putting a faint head of William III. on one side, and leaving the other quite plain; representing the coins, when detected, as buttons not yet shanked; and some actually escaped on this plea. From 1751 to 1793, at least, there was no coinage of crowns or half-crowns. Nothing was done to mend all this till the peace of 1815.

It may fairly be inferred that any establishment of a decimal coinage which contemplates a grand measure of re-contings, to be executed at one time, has no chance of success whatever. Aft the plans now recognize this: all the proposers declare that the existing coinage is to continue, until gradually absorbed by the Mint. But in all the plans, except that which adopts the pound and divides it into 1000 parts, this declaration is, in every thing except intention, a subterfuge and an evasion. A system which invites us to begin reckoning in sums of  $\frac{1}{2}d$ .,  $2\frac{1}{2}d$ ., 2s. 1d., and 1l. 0s. 10d., while our present coins exist, and while we are watching the gradual introduction of coins to presenting these sums, concurrently with the coins which now exist, will, we are satisfied, invite to nothing but laughter, when it becomes generally understood. The same may be said of the system which proposes 10d. and 8s. 4d. on the same terms. And any system which only only gives the option of decimal reckoning, and leaves the power of continuance in our present reckoning, will assuredly never succeed in introducing decimal reckoning at all.

We are now speaking of coinage, and therefore have only to compare with others our system in this one respect, referring to our number for 1854 for its description, etc. The farthing, halfpenny, and penny might remain in circulation, at 4 per cent under their present value, or at 25 farthings to the half-shilling. The principal new coin required would be the cent, ten new farthings, the hundredth of a pound. But this coin need not be fully introduced at the moment of the change; it would be enough that reasonable diligence, such as would not seriously inconvenience the Mint, should be used to issue it, and to call in the silver threepences and fourpences, which would, in the mean time, pass for 12 and 16 new farthings. The recall of the half-crowns, and the circulation of florins, might proceed with deliber-

ate steadiness.

Among the ancient difficulties of coinage was that of producing a perfectly round figure. The piece was beaten out to the proper size before it was punched. Hence the outer ring of the design could not come exactly upon the edge of the coin, or at equal distances from it throughout, so that there was an external space of which no one could say how large it ought to be, or how large it had been. The consequence was, that clipping the coin was a trade, which many severe laws were passed to prevent. A piece of money was considered of good reputation, if it were not dipped within the ring; and various laws designate this expressly as the limit up to which the coin was legal tender. The coining-mill, invented in France about 1553, was used in England in 1561, but only for a short time. Some partial revival of its tise occurred, but it did not become a permanent instrument till The milled money was the first in which equal thickness was secured by coining from plates drawn out between rollers; and also the first in which letters were put on the edge, or in which what we still call a milled edge was produced. This put a stop to outrageous clipping, and transferred that name, which still remained in Acts of Parliament, to the less violent process of filing; while at the same

time it introduced the process of sweating. It it said that, about 1770, filing of English gold went on in open day in Parisian workshops, at a gain of two shillings on the guinea. At the same time, both silver and copper were coined too high; so that much of the new coin found its way to the melting-pot before the shine had left its face.

The combined action of the Mint and the Bank has supplied a heart to the circulation of coin; and better knowledge of the conditions of health, in conjunction with the stimulating power of regulated paper currency, has prevented the alternate overactions and underactions of this organ. We have but one more great change to look for, the establishment of a coinage which will naturally lead to a decimal mode of reckoning: and it is fortunate that this can be done without any greater change than trivial and gradual additions to and withdrawals from the silver, a change of only four per cent in the copper, and no change of any kind in the gold.

University College, London, October 20, 1855.

FRAUDS ON THE BANK OF FRANCE.—The cashier of the Bank of France, on making up his accounts for the day on the 30th ult., missed 172 notes of 1,000f. each, which had been brought to him in the course of the day, and which, after counting, he had placed with other piles of notes on a shelf near him. Search was made everywhere, but without result, and information was immediately given to the police. From the inquiries which they made, their suspicions pointed to one of the clerks in the cashier's office, and orders were given that he should be strictly watched. New-Year's day being a holiday at the bank, the man left Paris in the evening of the 31st ult., to visit his friends in a village in Picardy, and the chief of the service de sureté and some active agents followed him there. Early the next morning they learnt that he had gone into a wood on a pretext of shooting, and they went towards the wood. They did not hear any repert of fire-arms, and after a while the man returned without any game. This naturally increased the suspicions against him. In the evening of the 1st he came back to Paris, the police still accompanying him, and the following days they watched him so closely and with such skill that they saw all he did, and almost heard all he said. At last it was deemed advisable to arrest him, but he energetically denied his guilt, and on his lodgings being searched nothing calculated to inculpate him could be discovered. The chef de sûreté accordingly determined on going down to Picardy to examine the wood in which the man had been; but, though he inspected every tree, he could find no marks on any one, and though he caused the earth to be dug up wherever it appeared to have been recently moved, he discovered nothing. The day before yesterday he determined to try the effect which the sudden revelation that he had been constantly followed, from the very moment of discovering the robbery, would produce on the man; and he began by stating that on the 31st of December he had followed him to the wood in question. The man started, and when the chef de sûreté proceeded to relate to him all that he had done on the following days, hour by hour, he seemed astounded. At last he confessed that he was the thief, and he stated that he had buried the notes beneath a particular tree in the wood in question. In consequence the chef again visited the wood, and found the notes at the place mentioned. The clerk is to be brought to trial.—Galignani's Messenger.

# NEW BANK LAW OF OHIO.

# PASSED APRIL 11, 1856.

# An Act to incorporate the Bank of Ohio and other Banks.

- § 1. Be it enacted by the General Assembly of the State of Ohio, That it shall be lawful for natural individual persons, not fewer in number in any case than five, to associate and form companies for the purpose of carrying on the business of banking, each at such place in this State as shall be designated in its articles of association and in the certificate hereafter required to be made, subject, however, to the contingencies, restrictions, conditions, and liabilities prescribed in this act.
- § 2. To carry into effect the provisions of this act, Wm. W. Scarborough, of Cincinnati, Franklin T. Backus, of Cleveland, Chauncey N. Olds, of Circleville, J. R. Finn, of Columbus, and Samuel Forrer, of Dayton, shall be, and they are hereby appointed commissioners, and they, or a majority of them, after taking an oath diligently, faithfully and impartially to perform the duties assigned them by this act, a certificate of which oath shall be filed and carefully preserved in the office of the Secretary of State, shall constitute a board, to be designated the board of bank commissioners; which board shall continue until the organization of the Bank of Ohio, as hereinafter provided for, and thereafter the duties which they are required to perform by this act, in the organization of branches of the Bank of Ohio, shall be performed by said bank, and the duties in the organization of independent banks which they are required by this act to perform, shall devolve on and be performed by the Auditor, Treasurer, and Secretary of State, who shall be commissioners to perform such duties, and if any of said commissioners shall refuse to serve, shall die or resign, his place shall be filled by the General Assembly, by joint resolution, if in session, and if not, by the Governor.
- § 3. Said commissioners shall meet in the city of Columbus, at such time, within thirty days after the second Tuesday of October next, as shall be appointed by the Governor, who shall notify each member of his appointment, and of the time and place of meeting. They shall, when met, appoint one of their number to be their president, who shall, under the order of the board, sign all official documents; and they shall cause a fair and true record of all their official proceedings to be kept in a book to be provided for that purpose.

§ 4. Persons associating to form a bank, shall, under their hands

and seals, make a certificate, which shall specify,

First—The name assumed by such bank, and by which it shall be known in its dealings, in which name shall be included the name of the city, village or town in which its banking operations shall be carried on;

Second—The amount of the capital stock of such bank, and the number of shares into which the same is divided;

Third—The name and place of residence and the number of shares held by each member of the company;

Fourth—The time when such company shall have been formed;

Fifth—That such company has elected to carry on its operations as an independent bank, or, as a "branch of the Bank of Ohio," as the case may be, which certificate shall be acknowledged before a justice of the peace or notary public, and shall be recorded by the recorder of the county where such bank is to be established, in a book to be kept by him for that purpose, which shall at all times during office hours be kept open for the inspection of any person wishing to examine the same; one copy of which certificate, duly certified, shall be transmitted to the Secretary of State, who shall record and carefully preserve the same in his office, and another to the board of bank commissioners.

- § 5. No company shall be permitted to commence or carry on the business of banking under this act, as a branch of the Bank of Ohio. unless its capital stock shall be at least one hundred thousand dollars, nor shall the capital stock of any such branch ever be increased to exceed four hundred thousand dollars, except as specially provided for in this act. No independent bank shall be organized under this act with a less capital than fifty thousand dollars; nor shall the capital stock of any such banks ever be increased to any sum exceeding two hundred thousand dollars, except as specially provided for in this act. At least fifty per cent of the capital stock of each company shall be paid in gold and silver coin, or their equivalent; one half of which fifty per cent at least shall be in gold and silver coin, and shall be in the actual possession and bona fide the property of the company at the time of the commencement of its banking business, and at the place designated for carrying on such business, and the remainder of the capital stock of such bank shall be paid in, in installments, each of at least ten per cent on the whole amount of the capital subscribed, as frequently as once in every four successive months, from the time of commencing business until the whole amount of such capital shall be paid up. Provided that the directors of the Bank of Ohio may extend the time for the payment of such deferred installments, or any part of them, to the branch banks, when satisfied that the public interest does not require them to be paid as frequently as above provided for, and the Governor may grant to the independent banks the like extension for the same Cause.
- § 6. If any shareholder or his assignee shall fail to pay any installment on his stock when the same shall be required to be paid, the directors may sell said stock at public auction, having given three weeks previous notice thereof, in a newspaper published in the county where the bank is located, to any person who will pay the highest price therefor, not less than the amount then due thereon; and the excess, if any, after paying the expenses of the sale, shall be refunded to the delinquent stockholder. If no bidder can be found who will pay for such stock the amount due thereon to the bank, and costs of advertisement and sale, the amount previously paid shall be forfeited to the bank; and such stock may be subsequently sold in such manner as the directors may order.

§ 7. The board of bank commissioners shall examine the certificates of the formation of banks, transmitted to them as required by the fourth section of this act, and shall, by one of their own members or other special agent appointed by them for that purpose, who shall not be a stockholder in any of the banks formed under this act, immediately proceed to examine the condition of each of the banks which shall have transmitted to said board the required certificate; and at shall be the especial duty of such agent to carefully count or charawise ascertain the amount of money paid in on account of its capital stock, to ascertain the name and place of each of the directors of hank, and that their stockholders, directors and officers are men responsibility and integrity, and entitled to the public confidence, and the amount of capital stock of which each is the bona-fide owner. whether such bank has complied with all the requirements of this act necessary to entitle the bank to engage in the business of banking, and shall cause to be made and attested by the oath of a majority of the directors, and by the cashier of such bank, a statement of all the material facts necessary to enable the board of bank commissioners to determine whether such bank is lawfully entitled to commence the business of banking under the provisions of this act, and such agent shall immediately report to the board of bank commissioners such statement and his proceedings in the premises.

§ 8. If, upon a careful examination of the certificates of association, and the reports and statements of the special agents appointed to ascertain whether the banks so organized have complied with the provisions of this act, it shall appear that any such banks have been formed, and that their stockholders, directors and officers are men of responsibility and integrity, and entitled to public confidence, and that such banks or any of them are lawfully entitled to commence the business of banking, the commissioners shall certify the same, the Governor, who shall, if he be satisfied that the law has in all respects been complied with, issue his proclamation, setting forth that such banks are authorized to commence and carry on banking, at the places severally designated

in their certificates of association.

§ 9. No bank shall be organized under this act, as a branch of the Bank of Ohio, in the county of Hamilton, with a less capital than five hundred thousand dollars, which may be increased to any sum not exceeding one million of dollars. Nor shall any independent bank be organized under this act in said county, with a less capital than two hundred and fifty thousand dollars, which may be increased to any sum not exceeding five hundred thousand dollars; provided that in no case where the capital stock of an independent bank is named in this act, shall the certificates of public debt required to be deposited by such banks with the Treasurer of State be treated or regarded as any part of such a capital stock.

§ 10. No bank shall be established under this act as a branch of the Bank of Ohio in the counties of Cuyahoga, Montgomery, Franklin, or Lucas, with a capital less than three hundred thousand dollars, which may be increased to any sum not exceeding six hundred thousand dollars, nor shall any independent bank be established in any of said

counties with a capital of less than one hundred and fifty thousand dollars, which may be increased to any sum not exceeding three hundred thousand dollars.

§ 11. The capital stock of each bank shall be divided into shares of one hundred dollars each, and shall be assignable on the books of the company, in such manner as its by-laws shall prescribe; but no shareholder shall have power to sell or transfer any shares held in his own right so long as he shall be liable, either as principal debtor, surety, or otherwise, to the company, for any debt which shall be unpaid; nor in such case shall such shareholder be entitled to receive any dividend, interest or profit on such shares, so long as such liabilities shall continue, but all such dividends, interests or profits shall be retained by the bank and applied to the discharge of such liabilities, and no stock shall be transferred without the consent of a majority of the directors, while the holder thereof is indebted to the company.

while the holder thereof is indebted to the company.

§ 12. No bank shall take, as security for any loan or discount, a lien on any part of its capital stock, but the same security, both in kind and amount, shall be required of shareholders as of persons not shareholders; and no bank shall be the holder or purchaser of any portion of its capital stock, or of the capital stock of any other incorporated company, unless such purchase shall be necessary to prevent loss upon a debt previously contracted in good faith, on security which at the time was deemed adequate to insure the payment of such debt, independent of any lien upon such stock, or in case of forfeitures of stock for the non-payment of installment due thereon, as provided in the sixth section; and stock so purchased shall in no case held by the bank so purchasing for a longer period of time than six months, if the same can be sold for what the stock cost, or at par.

§ 13. In all elections of directors, and in deciding all questions at meetings of the stockholders, each share shall entitle the owner thereof to one vote; stockholders may vote by proxies duly authorized in writing, but no officer, clerk, teller or book-keeper of the bank shall act as proxy, and no stockholder whose liability to the bank is past due

and unpaid shall be allowed to vote.

§ 14. The affairs of every bank organized to carry on the business of banking under the provisions of this act, shall be managed by not less than five nor more than nine directors. Every director shall, during his whole term of service, be a citizen of the United States and a resident of this State. At least three fourths of the directors shall have resided in this State one year next previous to their election as directors; each director shall own in his own name and right at least one per cent of the capital stock of the bank up to two hundred thousand dollars, and the half of one per cent on its capital over two hundred thousand dollars. The directors of each bank, collectively, shall own at least one tenth of its capital stock. Each director shall take an oath that he will, so far as the duty devolves on him, diligently and honestly administer the affairs of the bank, and not knowingly violate or willingly permit to be violated any of the provisions of this act; that he is the bons fide owner, in his own right, of the stock standing in his name on the books of the bank, and that the same is

not hypothecated, or in any way pledged as security; for any loan obtained or debt owing; which oath, subscribed by himself and certified by the officer before whom it is taken, shall be filed and carefully preserved in the office of the recorder of the county in which the bank is located; but no person shall be president of more than one bank organized under this act, at the same time.

§ 15. The directors of any bank first elected shall hold their places until the first Monday in January next thereafter, and until their cessors shall be elected and qualified; all subsequent elections shall be held annually on the first Monday of January, and the directors so elected shall hold their places for one year, and until their successors are elected and qualified; but any director removing from the State, or ceasing to be the owner of the requisite amount of stock, shall thereby vacate his place. Any vacancy in the board shall be filled by appointment by the remaining directors; the director so appointed shall hold his place until the next annual election; and if from any cause an election of directors shall not be made at the time appointment the bank shall not for that cause be dissolved, but an election may be held on any subsequent day, thirty days notice thereof having been given in a newspaper printed in the county where the bank is located.

§ 16. Every bank authorized to carry on the business of banking under the provisions of this act, whether as a branch of the Bank of Ohio, or as an independent bank, shall be held and adjudged to be a body corporate, with succession until the first of May in the year one thousand eight hundred and seventy-seven, and thereafter, until its affairs shall be closed; and by its corporate name shall be competent to contract, prosecute and defend suits and actions of every description as fully as natural persons, and process against such bank may be served upon its president or cashier, or by leaving a copy thereof at its usual place of business during the usual business hours. Each of said banks shall, until the first day of May, in the year one thousand eight hundred and seventy-seven, if so long it shall comply with the provisions of this act, have power to loan money, buy, sell and discount bills of exchange, notes, and all other written evidences of debt, except such as it shall be prohibited by this act from buying, selling or discounting; receive deposits; buy and sell gold and silver coin and bullion; collect and pay over money, and transact all other business properly appertaining to banking, subject, however, to the provisions and restrictions contained in this act; may acquire, hold and convey such real estate as may be necessary to the convenient transaction of its business, and no more, but may, however, acquire title to any real estate pledged tosecure any debt previously contracted or purchased on an execution or order of sale, to satisfy any judgment or decree in its favor, or which shall have been conveyed to it in payment of any previous debt, but shall not hold any real estate so acquired longer than is necessary to avoid a loss of any part of the debt, interests and costs, for the collection or security of which it was acquired, but at any time before selling the same, upon being tendered by the last preceding owner, or his legal representatives, such sum as shall be necessary to save such bank from loss of any part of the debt, interest, taxes, costs, and other

necessary charges for the collection or security of which such real estate was acquired, such bank shall release to such owner, his legal representatives or assigns, all its right, title and interest therein.

- § 17. Notes of one dollar, two dollars, three dollars, five dollars, tendellars, twenty dollars, fifty dollars, and one hundred dollars each, and no note of any other denomination, may be issued by any bank organized under this act; of the notes issued by any such bank, not more than ten per cent of the amount shall be in notes of one dollar each; not more than five per cent in notes of two dollars each; not more than ten per cent in notes of three dollars each; not more than twenty per cent shall be in notes of all denominations under five dollars; and not more than fifty per cent in notes of all denominations under ten dollars.
- § 18. No bank organized under this act shall, at any time, issue or have in circulation any note, draft, bill of exchange, acceptance, certificate of deposit, or other evidence of debt, which from its character or appearance shall be calculated or intended to circulate as money, other than such notes of circulation as are by this act described, and which such bank is expressly authorized to issue for the purpose of being circulated as money.
- § 19. Each independent bank shall receive at par, at the office or banking-house of such bank, in payment of debts due at such bank for notes of hand, bills of exchange, or other evidences of debt discounted or purchased by or belonging to such bank, the notes of circulation issued by any other independent bank authorized to issue such notes by this act, which shall at the time redeem its notes in gold and silver coin; and every branch bank of the Bank of Ohio shall receive at par, at the office or banking-house of such branch, in payment of debts due at such bank for notes of hand, bills of exchange, or other evidences of debt discounted or purchased by, or belonging to such branch bank, the notes of circulation issued by any other branch of the Bank of Ohio.
- § 20. Each bank shall at all times have on hand, in gold and silver coin, or their equivalent, one half at least of which shall be in gold and silver coin, in its vault, an amount equal to at least thirty per cent of the amount of its outstanding notes of circulation; and whenever the amount of its outstanding notes of circulation shall exceed the above-named proportion, no more of its notes shall be paid out, or otherwise put in circulation by such bank; nor shall such bank increase its liabilities, by making any new loans or discounts, other than discounting or purchasing bills of exchange payable at sight, nor make any dividend of its profits, until the required proportion between its outstanding notes of circulation and gold or silver coin, or their equivalent on hand, shall be restored. Actual deposits with any solvent bank or banker of established credit, in the cities of New-York, Boston, Philadelphia, or Baltimore, subject to be drawn against at sight, payable in gold and silver coin, shall be deemed equivalent to gold and silver coin, wherever these terms are used in this act.
- § 21. No bank organized under this act shall at any time be indebted or in any way liable to an amount exceeding, if a branch of the Bank

of Ohio, two thirds, or if an independent bank, the whole amount of its capital stock at such time actually paid in, and remaining as capital stock undiminished by losses or otherwise, except on the following accounts—that is to say

First—On account of its notes of circulation;

Second—On account of moneys deposited with or collected by such

Third—On account of bills of exchange or drafts drawn against money actually on deposit to the credit of, or due to, such bank;

Fourth—Liabilities to its stockholders on account of money paid in.

on capital stock and dividends thereon.

- § 22. No bank shall, either directly or indirectly, pledge, hypothecate, or exchange any of its notes of circulation for the purpose of procuring money to be paid in on its capital stock, or to be used in its ordinary banking operations, or for the purpose of purchasing certificates of State stock to be deposited with the Treasurer of State, or with the Bank of Ohio; nor shall any bank apply or permit to be applied, hypothecated, or pledged, any portion of its capital stock to the purchase of certificates of State stock, to be deposited with the Treasurer of State, as collateral security for the redemption of its notes of circulation.
- § 23. No bank shall, during the time it shall continue its operations. as a bank, withdraw, or permit to be withdrawn, either in form of dividends, loans to stockholders, for a longer period of time than four months, or in any other manner, any portion of its capital stock; and if losses shall at any time have been sustained by any bank, equal to or exceeding its undivided profits then on hand, no dividends shall be made, and no dividend shall ever be made by any bank while it shall continue its banking operations to an amount greater than its net profits then on hand, deducting therefrom its losses and bad and suspended debts; and all debts due to a bank on which interest is past due and unpaid for a period of six months, unless the same shall be well secured, and shall be in the process of collection, shall be considered bad or suspended debts, within the meaning of this section.
- § 24. The directors of each bank shall, semi-annually on the first Monday in May and November, declare a dividend of so much of the net profits of the bank as they shall judge expedient; and on each dividend day, the cashier shall make a full, clear, and accurate statement of the condition of the bank as it shall be on that day, after declaring the dividend, which shall be verified by the oath of the cashier, president, and a majority of the directors; and similar statements shall also be made on the first Monday in each month, in each year, which statement shall contain,

First—The amount of the capital stock actually paid in, and then remaining as the capital stock of the bank.

Second—The amount of the bills or notes of the bank then in cir-

culation, specifying the amount of each denomination.

Third—The greatest amount in circulation at any time since the making of the last previous statement, as shall have been exhibited by the weekly statements of the cashiers, specifying the times when the same occurred;

Fourth—The amount of balances and debts of every kind due to the branches of the Bank of Ohio, the amount due to other banks of the State, and the amount due to banks not of this State;

Fifth—The amount due to depositors;

Sixth—The total amount of debts and liabilities of every description, and the greatest amount since the making of the last previous statement, specifying the time when the same occurred;

Seventh—The total amount of dividends declared on the statement; Eighth—The amount of gold and silver coin and bullion belonging to such bank, and in possession, at the time of making the statement, designating the amount of each;

Ninth—The amount subject to be drawn at sight, in gold and silver, then remaining on deposit with solvent specie-paying banks or bankers, in the cities of New-York, Philadelphia, Boston, and Baltimore;

Tenth—The amount then on hand of bills or notes, issued by branches of the Bank of Ohio, the amount issued by other banks of this State, and the amount issued by banks not of this State;

Eleventh—The amount of balances due from branches of the Bank of Ohio, the amount due from other banks of this State, and the amount due from banks not of this State, excluding, in the latter case, deposits in the cities of New-York, Philadelphia, Boston, and Baltimore, subject to sight-drafts payable in specie;

Twelfth—The amount on hand of bills, bonds, notes, and other evidences of debts, discounted or purchased by the bank, specifying particularly the amount of suspended debt, the amount considered bad, the amount considered doubtful, and the amount in suit or judgment;

Thirteenth—The value of the real and personal property held for the convenience of the banks, specifying the amount of each;

Fourteenth—The amount of real estate taken in payment of debts due the bank;

Fifteenth—The amount of the undivided profits of the bank:

Sixteenth—The total amount of the liabilities to the bank by the directors thereof, collectively, specifying the gross amount of such liabilities as principal debtors, and the gross amount of indorsers or sureties; which statement shall be forthwith transmitted to the Auditor of State.

An abstract of every such statement, showing the condition of the bank, shall be immediately published by the bank, in some newspaper printed in the county where such bank is situated.

§ 25. The General Assembly shall never impose any greater tax upon property employed in banking under this act, than is or may be

imposed upon the property of individuals.

§ 26. Every bank organized under this act may take, reserve, receive, and charge on any loan or discount made, or upon any note or bill of exchange, or other evidence of debt, at the rate of six per centum per annum on the amount of any such note, bill of exchange, or other evidence of debt so discounted, and no more; provided, however, that interest may be reserved or taken in advance at the time of making the loan or discount, according to the usual rules of banking, or as calculated in Rowlett's tables; and the knowingly taking, reserv-

ing, or charging on any debt or demand discounted or purchased by such bank, at a rate of interest greater than that allowed by this section, shall be held and adjudged a forfeiture of such debt or demand, but the purchase or discount of a bona-fide bill of exchange or note, payable at another place than the place of such purchase or discount, and the taking or reserving of interest thereon at the rate aforesaid, from the time of such purchase or discount until the maturity of such bill or note, shall not be held usurious, although exchange on the place where it is made payable, is at the time of such purchase or discount worth a premium; nor shall the discount or purchase of a bona-fide bill or note, payable at a place between which and the place of discount or purchase exchange is in favor of the place of discount or purchase, and the taking, in addition to the rate of interest aforesaid, the rate of exchange between such places, be deemed usurious; provided, no more than one half of one per cent shall be taken as exchange upon any such paper payable in this State, and no more than one per cent upon any such paper payable out of this State, and in no case shall more than the current rate of exchange between such places be taken.

§ 27. The total liabilities of any person, or of any company or firm, (including in the liabilities of any person, or of a company or firm, the liability of the several members thereof,) to any bank organized under this act, inclusive of liabilities as acceptor or acceptors of bona-fide bills of exchange, shall at no time exceed one half, inclusive of liabilities as acceptor or acceptors, one fifth, and exclusive of all liabilities on such bills of exchange, one tenth part of the amount of the notes which such bank is authorized to circulate at the time of such lia-

bilities.

§ 28. No bank shall, at any time, pay out on loans or discounts, or in purchasing of drafts or bills of exchange, or in payment of depositors, nor shall it in any mode put in circulation the notes of any bank or banking company which notes shall not at that time be receivable at par in payment of debts, by the banks so paying out or circulating such notes, nor shall it knowingly pay out or put in circulation any notes issued by any bank or banking company which, at the time of such paying out or putting in circulation, is not redeeming its notes in gold and silver, nor any notes issued by any bank out of this State.

§ 29. All notes, bills, and other evidences of debt, excepting bills of exchange, discounted by any bank, shall be made by the terms thereof, or by special indorsement, payable solely to such bank, and no such evidence of debt shall be assignable except for collection, or for the

following purposes:

First—To pay and redeem the circulating notes of such bank; Second—To pay other liabilities of the said bank; and after such liabilities shall have been discharged;

Third—To divide among the shareholders on their stock.

§ 30. No bank organized under this act shall issue any certificate of deposit, order, draft, bill of exchange, or other evidence of debt, payable in currency or in any thing less valuable than gold and silver coin, except receipts for special deposits; nor shall any such bank keep any

accounts in currency or in any thing less valuable than gold and silver coin, except accounts of special deposits.

§ 31. No bank organized under this act, shall be permitted, in receiving payment at its banking-house or other place than where the same was payable, of any note, bill, or other evidence of debt, due to such bank, and payable at a place other than at its banking-house, to receive, in addition to the amount of such debt and the legal interest due thereon, any sum whatsoever as premium, exchange, or damages; provided, nothing in this section contained shall prevent such bank from receiving the damages allowed by law upon any bona-fide bill of

exchange, duly protested for non-acceptance or non-payment.

§ 32. All transfers of notes, bonds, bills of exchange, and other evidence of debt owing to any bank, or of deposits to its credit; all assignments of mortgages, or other securities on real estate, or of judgments or decrees in its favor; all deposits of money, bullion, or other valuable thing for its use, or for the use of any of its stockholders or creditors,; all payments of money to either, made after the commission of an act of insolvency, or in contemplation thereof, with a view to prevent the application of its assets in the manner prescribed by this act, or with a view to the preference of one creditor to another, except in payment of its circulating notes, shall be held utterly null and void.

§ 33. If the directors of any bank organized under this act, shall knowingly violate, or knowingly permit any of the officers, agents, or servants of such bank, to violate any of the provisions of this act, all the rights, privileges, and franchises of said bank shall thereby be forfeited; such violation shall, however, be determined and adjudged by a court of competent jurisdiction, agreeable to the laws of this State and the practice of such court, before the corporation shall be declared dissolved; and in case of such violation, every director who participated in, or assented to the same, shall be held liable in his personal and individual capacity for all damages which the company, its shareholders, or any other persons, body corporate or incorporate, shall have sustained in consequence of such violation.

§ 34. Every president, director, cashier, teller, clerk, or agent of any bank, who shall embezzle, extract, or wilfully misapply any of the moneys, funds, or credits of such bank, or shall, without authority from the directors, issue or put in circulation any of the notes of such bank, or shall, without such authority, issue or put forth any certificate of deposit, draw any order or bill of exchange, make any acceptance, sign any note, bond, draft, bill of exchange, mortgage judgment or decree, or shall make any false entry on any book, report, or statement of the bank, with an intent in either case to injure or defraud such bank, or to injure or defraud any other company, body corporate or politic, or any individual person, or to deceive any officer or agent appointed to inspect the affairs of any bank in this State, shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be confined in the penitentiary at hard labor, not less than five nor more than ten years.

§ 35. Stockholders in banks organized under this act, shall each be

individually and severally liable to the creditors of a bank of which they are stockholders, in a sum equal in amount to the stock owned by each; and should any such bank become insolvent, and its assets be found insufficient to pay its debts and liabilities, its stockholders may be compelled to pay such deficiency, in proportion to the amount of stock owned by each; and should the whole amount for which the stockholders are individually responsible, as provided in this section, be found in any case to be inadequate to the payment of all the residue of the debts of any bank after the application of its assets to the payment of such debts, then, and in that case, the moneys due from stockholders on account of their individual liabilities as such, shall be distributed equally among all the creditors of such bank, in proportion to the amount due to each; the personal liability in this section provided for, is over and above the stock owned by stockholders, and any amount unpaid thereon.

§ 36. The General Assembly may alter or repeal this act at pleasure, but no act altering or repealing this act, shall impose any injustice or wrong upon the stockholders of any bank organized under it.

§ 37. Every corporation organized under this act, shall have power to make all necessary and proper by-laws for the management and control of its business, and to fix and regulate the rate of charges for making collections. The Bank of Ohio may revise the by-laws and may also revise the regulations of the branches concerning charges for making collections, and cause both to be made uniform among the branches, or as nearly so as may be deemed expedient.

§ 38. The corporations organized under this act shall continue to exist so long as necessary for the settlement of their affairs, notwithstanding the repeal of this act; and no law shall ever be passed diverting or appropriating the assets of any such corporation to any purpose other than to the payment of its debts and liabilities, and the distribution of the residue among its stockholders in proportion to the stock by them severally owned.

# In relation to the Bank of Ohio.

§ 39. Whenever, from an inspection of the certificates transmitted by banks to the Board of Bank Commissioners, it shall appear that any number of said banks, not less than five, have made their election to transact their banking operations as branches of the Bank of Ohio, and have complied with the requirements of this act preliminary to the commencement of banking operations, then said Commissioners shall immediately notify each of said banks thereof, and within ten days after receiving such notice, they shall each appoint in such manner as the directors thereof shall prescribe, one person to be a director of the Bank of Ohio. But no person who is not a citizen of the United States, and a resident within this State, at least one year next previous to his appointment, shall be such director.

§ 40. The directors of the Bank of Ohio who shall have been appointed agreeably to the provisions of the preceding section, shall, from the time of its organization until the first day of May, in the year

one thousand eight hundred and seventy-seven, and thereafter, until the affairs of the several branches of the Bank of Ohio shall be finally closed up, be a body corporate, with a succession, and by the name of the Bank of Ohio, capable of contracting and of prosecuting and defending suits or actions, as fully as natural persons, and of doing all other acts and things necessary to effect the object contemplated in this act by the formation of said corporation. They shall meet in the city of Columbus at such time as it shall be designated by the Board of Bank Commissioners, who shall give ten days' previous notice to each branch of the time of such meeting; they shall each take an oath diligently, faithfully, and impartially to perform the duties imposed out them by this act; a certificate of which oath shall be filed and preserved in the office of the Secretary of State. They shall organize, provided two thirds of the whole number shall be convened, by electing some suitable person as president, whose duty it shall be to preside at the meetings of the board, and sign its official documents. They shall elect a vice-president, whose duties shall be prescribed by the bylaws of the corporation. They shall appoint a secretary, who shall keep a fair and true record of the proceedings of the bank. They shall keep an office in the city of Columbus, which, together with their books, papers, records, and accounts of every description, shall at all times be open to the inspection of any committee of the General Assembly, or either branch thereof, and of any commission or commissioners especially appointed for that purpose by the General Assembly, and of any person appointed by any one of the branches. They shall procure and furnish each branch with notes for circulation, and decide on the amount to be furnished from time to time to each, within the limits and agreeably to the rules and restrictions prescribed by this act. They may prescribe rules for the setlement of balances between the branches. They shall have power by themselves, or by a committee of one or more members of their own body, or by a special agent appointed by them for that purpose, whenever and as often as they shall think proper, to visit any branch, inspect its books, records, and accounts, and all the evidences of debt due to, and securities held by such branch, examine and ascertain the amount of money and other property held by such branch, examine on oath the president, vice-president, directors, cashier, and all other officers, agents, clerks, or servants of the branch, touching its condition, means, and liabilities. They shall have power to require any branch to reduce its circulation or other liabilities, within such limits as they shall, after full inquiry into its condition, deem necessary to secure from loss either the dealers with such branch, or the other branches of the Bank of Ohio. They may require the officers of each branch to make out, under oath, and transmit to the office of said bank at Columbus, statements of the condition thereof, in such form as such bank shall prescribe, and as frequently as they shall deem. proper, which statements shall be recorded in a book or books to be kept for that purpose. They may appoint an executive committee of not less than three, of whom the president, or vice-president shall be que, to act in behalf of the bank in such cases, and perform all such duties as shall be prescribed by the by-laws of said bank, not inconsistent with this act.

§ 41. The president, vice-president, and secretary of the bank, shall each receive such compensation for their services as said bank shall allow, which shall be assessed upon the several branches of the Bank of Ohio, in the ratio of their capital stock. The bank may also allow the executive committee such compensation as it shall deem just and reasonable, to be paid by the several branches in the same manner; and the expenses of procuring plates and printing notes of circulation, shall be paid by the several branches in the ratio of the notes of circulation, received by each.

§ 42. Each director of the bank shall continue in office until the first Monday of February next after his appointment, and until his successor shall be appointed and qualified; vacancies in the board shall be filled by the branch by which the appointment vacated was made. In voting each member shall be entitled to one vote, and to one additional vote for every fifty thousand dollars of the amount of capital stock paid into the branch represented by him over one hundred thousand dollars, at the time of such voting. The president and vicepresident shall hold their offices for one year, and until their successors shall be appointed, but they may be removed by a resolution of the board. They shall take an oath faithfully, diligently, and impartially to fulfill the duties of their appointments, and not knowingly violate any of the provisions of this act. They may be required to give bond in such sum, and with such securities as the bank shall prescribe; and all vacancies in said appointments shall be filled by the bank.

§ 43. All notes issued by any branch, intended to circulate as money, shall be payable at the branch by which they are issued, in gold and silver coin, the lawful currency of the United States, or either, at the option of the branch, on demand; they shall be signed by the president or vice-president of the Bank of Ohio, countersigned by the cashier of the branch by which they are issued, made payable to bearer, and shall be negotiable by delivery; all other evidences of debt, issued by any branch, shall be negotiable or transferable in the same manner as if issued by a natural person, and shall be binding on the branch, whether under seal or not, and all such evidences of debt, other than notes of circulation, shall be payable to the order of some person therein named.

§ 44. No branch of the Bank of Ohio shall, at any time, have in circulation notes in the similitude of bank-notes, to an amount bearing a greater proportion to the capital stock of said branch actually paid in and at the time remaining undiminished by losses or withdrawal, than the proportion hereinafter specified, that is to say:

On the first hundred thousand dollars, or any lesser amount of its cap-

ital, not more than twice the amount of such capital.

On the second hundred thousand dollars or part thereof, not more than once and three quarters the amount of such capital, over one hundred thousand.

On the third hundred thousand dollars or part thereof, not more than once and a half the amount of such capital, over two hundred thousand.

On the fourth hundred thousand dollars, or part thereof, not more than once and a quarter the amount of such capital, over three hundred thousand; and,

On any amount of capital over four hundred thousand dollars, not more than an amount equal to such capital, over four hundred thousand.

§ 45. Notes designed for circulation shall be delivered by the Bank of Ohio to each branch, on a written order, signed by the president and a majority of the directors of such branch; such orders shall be carefully preserved by said bank in its office; an accurate account of all the notes so delivered, the amount of the notes of each denomination so delivered, and the date of such delivery, shall be kept by the Bank of Ohio, in a book or books, to be provided and kept in its office at Columbus; all notes so worn, defaced, or mutilated, as to be unfit for circulation, shall be returned by the branch by which they were issued to the bank, and an equal amount of new notes received therefor; all such notes so returned by a branch, shall be credited, and all new ones delivered in their stead shall be charged to such branch on the books of said bank; and the notes so returned shall be burned to ashes in the presence of the president, and at least two of the directors of said bank.

§ 46. Before the bank shall deliver to any branch notes for circulation, it shall require such branch to pay over or deposit to the credit of said bank, as said board shall order, either in money or in certificates of the stocks of this State or of the United States, at their current value in the city of New-York, but in no instance above their par value, an amount equal to ten per cent on the amount of the notes for circulation which shall be delivered to such branch. And so, from time to time, as any branch may, by the paying in of an additional amount on its capital stock, or by not having received the amount of notes for circulation to which it was previously entitled, be authorized to demand an additional amount of notes for circulation, such branch shall deposit with the bank ten per cent on the amount of notes so required; and the stocks and money so deposited shall be denominated the "safety fund," and shall be invested as hereinafter prescribed, and held by the bank as the property of said branch, in trust for the benefit of the several branches of the Bank of Ohio, and as a fund for the redemption of the notes of circulation of any one or more of said branches that may fail to redeem its notes, to be applied to that purpose in the manner pointed out by this act.

§ 47. All money so deposited or paid to the bank on account of the safety fund, by any branch shall be, under the direction of said bank, invested by such branch either in stocks of the State or of the United States, or in bonds secured by mortgages on unincumbered real estate situated in the county where such branch is located, or in adjoining counties, of at least twice the value in each case of the amount secured thereby, exclusive of buildings or other fixtures subject to be destroyed by fire, by floods, or other accidental occurrences, or of timber, mines, or minerals, subject to waste; which bond shall be made payable on demand to the Bank of Ohio, and shall bear such rate of interest as shall be agreed on by the parties, not exceeding seven per cent per annum, payable semi-annually. Each branch shall be entitled to receive the interest accruing on the stocks or bonds in which its portion

of the safety fund shall have been invested; and in case of the insolvency of any branch, the stocks and bonds in which the money of such branch shall have been invested as aforesaid, if the proceeds of such stocks and bonds shall be sufficient to redeem its outstanding notes of circulation, shall, as far as practicable, be first converted into money and applied to that purpose before any part of the safety fund belonging to other branches shall be so applied.

§ 48. The stockholders collectively, of any branch shall at no time be liable to such branch, either as principal debtors or sureties, or both, to an amount exceeding one third part of the capital stock of such branch, then actually paid in, and remaining as capital stock; nor shall the directors, collectively, be so liable to an amount exceeding one third part of the stock actually paid in, standing in their names, and of which they are collectively the bona-fide owners in their own right.

§ 49. If any branch of the Bank of Ohio shall refuse to pay its notes of circulation, or any of them, in gold or silver coin of the lawful currency of the United States, on which payment shall be lawfully demanded at its banking-house, or customary place of doing banking business, during usual banking hours, such branch shall be deemed to have committed an act of insolvency, and thereupon all its property, credits, securities, liens, and assets of every description shall forthwith vest in and be the property, credit, securities, liens, and assets of the Bank of

Ohio, for the uses and purposes declared in this act.

§ 50. The Bank of Ohio on receiving information that any branch has committed an act of insolvency, shall forthwith appoint a committee of one or more of its directors, who shall make immediate inquiry into the truth of such information, and report thereon to the board; and if the board shall be satisfied from the report of the committee that such branch has suspended the payment of its notes in gold and silver, they shall forthwith appoint a suitable receiver or receivers, who shall take immediate possession of the books, records, money, choses in action, and property of said branch, of every description, and hold the same for the joint use and benefit of the other branches of the Bank of Ohio, and the creditors of the failing branch; and said Bank of Ohio shall immediately provide money and place the same in such solvent branch or branches as may be most convenient for the purpose of redeeming the notes of such failing branch, and shall give public notice thereof, in some newspaper printed in the place where such failing branch is located, and also in some newspaper of general circulation published at Columbia.

§ 51. Each solvent branch shall contribute, in the ratio of the circulation to which it is entitled, to the sum necessary for redeeming the notes of the failing branch, as provided in the preceding section, on the requisition of the Bank of Ohio, and may be remunerated for such contribution, from the safety fund as soon as money sufficient can be raised from that fund, by a sale or hypothecation of the stock, funds,

or other securities belonging thereto.

§ 52. The receiver or receivers appointed as provided in the fortyninth section, shall be required to give bond in such sum and with such securities as the Bank of Ohio shall judge sufficient, and under the di-

rection of said bank, shall proceed to settle up the affairs of such branch, and convert its assets into money; the money so made shall be applied:

First—To reimburse all moneys which shall have been advanced by the several branches for the redemption of the notes and bills of the insolvent branch, and which may not have been previously reimbursed

from the safety fund.

Second—To reimburse all moneys advanced from the safety fund, other than moneys derived from that portion of the safety fund furnished by the failing branch.

Third—To the payment and discharge of all the remaining habilities

of each branch; and,

Fourth—The residue shall be divided among the stockholders of the failing branch, in proportion to the stock by them respectively held.

§ 53. If any branch against which the Bank of Ohio shall have instituted proceedings on account of any supposed act of insolvency as prescribed by the forty-ninth section of this act, shall deny having committed such act of insolvency, such branch may apply to any court of competent jurisdiction for a writ of injunction to said Bank of Ohio, to suspend all further proceedings against such branch as an insolvent bank, and such court, after citing said Bank of Ohio to appear and show cause why such writ should not be granted, and after the finding of a jury that such branch has at all times continued and still continues to redeem, in gold and silver coin, its notes of circulation, shall make an order enjoining the Bank of Ohio from all further proceedings against such branch on account of the supposed act of insolvency on which such proceedings were instituted, and thereupon all the property and assets of such branch shall be restored to the directors.

§ 54. If the Bank of Ohio shall in any case fail to proceed in the manner prescribed in the foregoing sections of this act, in providing for the payment of the outstanding notes of circulation, and in closing the affairs of any branch that shall have committed an act of insolvency, the holder of any of its notes of circulation, or other creditor of such branch may, in case payment of such notes of circulation or other claim has been refused when lawfully demanded, and remains unpaid, apply to any court of competent jurisdiction for its writ commanding the Bank of Ohio so to proceed; and it shall be the duty of such court, after citing such bank to appear and show cause why such writ should not issue, and upon the finding of a jury that such act of insolvency has been committed, to issue their writ commanding said bank to forthwith proceed in the manner pointed out in the preceding section of this act, to provide for the payment of the outstanding notes of such branch, close up its affairs and make application for its

§ 55. That if any branch of the Bank of Ohio shall neglect or refuse to comply with any order of the Bank of Ohio, requiring such branch to reduce its circulation or other liabilities, or to provide a larger amount of specie or other means, to pay in its stock, or to do, or cease to do any other matter or thing which said bank may deem necessary for the security of such branch or any other branch or branches,

said bank or any director thereof, acting for said bank, may apply to any judge of the Supreme Court or Court of Common Pleas, or any judge of a Superior Court, by petition, in which the Bank of Ohio shall be made petitioner, and the branch implicated defendant, setting forth the substance of such order, or orders, and such neglect or refusal, on the part of the branch, its officers or agents, to comply therewith; and if the president, vice-president, or any director of the bank shall make affidavit of the truth of the facts therein stated, it shall be the duty of such judge to allow an injunction, and to enjoin such branch, its officers, agents, and all others in its employ, or connected therewith, from doing, or suffering or permitting to be done, any business whatever as a bank, and from intermeddling with, or in any manner disposing of, the books, papers, money, choses in action, assets, or property of the branch, whatsoever, until the further order of the Supreme Court, or some judge thereof. The petition shall be filed in the Supreme Court at Columbus, as soon as injunction is allowed.

§ 56. Upon the allowance of such injunction, the property, credits, securities, liens, and assets, of every description, of such branch, shall forthwith vest in the Bank of Ohio, who shall appoint a receiver to take possession of the same, as provided in the 49th section of this act. A certificate of appointment of such receiver, by the judge, or court, or clerk thereof, making the same, shall be sufficient authority to him to take possession of the books, property, and rights of every description, of such branch, and shall be full authority to the sheriff of the county where the branch is located, to give such receiver full possession of such books, property, and rights, with the aid of the county, if required; and said bank and receiver shall be governed by the provisions of this act, as provided in cases of suspension; and upon the dissolution of such injunction, or a discontinuance of such suit by the bank, all the rights and property of such branch shall be restored to

and vested in said branch.

§ 57. The directors of the Bank of Ohio, whenever they may deem it expedient, may establish an office in each or either of the cities of New-York, Cincinnati, and Cleveland, for the receipt of deposits and redemption of the circulating notes of the branches, upon such terms as they may from time to time prescribe, and also a clearing-house at Columbus. They may make all rules and regulations necessary to the good management of such offices and clearing-house, require the several branches to contribute to the capital of such offices, not exceeding five per cent of the stock paid in by each branch, and compel the branches to make their collections and deposits with said offices, and to employ all such agents as may be necessary. The net profits of the offices shall be divided among the branches equitably. The office in New-York, in transacting its business at that place, may take, reserve, and receive such rate of interest as is or may be lawful by the laws of the State of New-York, and no more.

§ 58. Any existing independent bank, banking company, or free bank, created by the laws of this State, and authorized to issue notes for circulation, may, after the organization of the Bank of Ohio, become a branch of the Bank of Ohio upon full compliance with

all the requisitions of this act necessary to create a branch of such bank. The directors of any such existing bank organizing as such branch under this act, may do and perform all the acts required of stockholders, to perfect such organization; and after the full organization of any such existing bank as a branch of the Bank of Ohio, such original corporation shall be held to be dissolved, except for the purpose of collecting its assets and the final settlement of its affairs, in the manner provided in its charter; provided, that nothing in this section contained shall be so construed as to require the Bank of Ohio to admit any such independent or free bank to become a branch of the Bank of Ohio unless the directors of the Bank of Ohio shall be satisfied that the admission of such bank will not jeopardize the interests of the public or of the Bank of Ohio.

§ 59. The Bank of Ohio, after establishing its agency in New-York, shall, as a bonus for this charter, in addition to the taxes to be assessed under the twenty-fifth section of this act, when required by the proper officers of the State of Ohio, discharge the duties of transfer-agent of the State, and receive and disburse for the State all moneys necessary to be received and disbursed in that city in the payment of the public debt and interest thereon, without any other compensation or charge

for such service.

### IN RELATION TO INDEPENDENT BANKS.

§ 60. Each company that shall have elected to carry on its business as an independent bank, and shall have complied with the requirements of this act, preliminary to the commencement of banking business, shall, before it shall commence such business, and before it shall be held to have acquired corporate powers, deposit with and transfer to the Treasurer of State, certificates of the funded debt of this State, of the United States, of the State of Massachusetts, Indiana, Illinois, Kentucky, Pennsylvania, Maryland, New-York, or Michigan—one half of which shall be in the certificates of the United States and of this State, an amount at least equal to the amount of its capital stock at such time paid in; and from time to time, as an additional instalment or portion of its capital stock, shall be paid in additional certificates of the funded debt above specified, at least equal in amount to the amount of such additional payments of capital stock, shall, within thirty days after such payment, be deposited with and transferred to the Treasurer of State; but no such certificate of funded debts shall be received by said treasurer at a rate or price above the average selling price of such certificates at the New-York stock exchange for the four weeks next preceding the time of the receipt thereof by the Treasurer; nor shall any certificate be received at any rate above its par value, exclusive of the unpaid interest that may have accrued thereon; and if such bank shall fail to make deposits and transfers of stock, as in this section required, all its franchises and powers derived from this act, except such as may be necessary to settle up its affairs, shall immediately cease and determine.

§ 61. The Treasurer of State shall deliver, from time to time as he

may be prepared so to do, to any independent bank that may have entitled itself thereto, on the written order of the president and a majority of its directors, notes for circulation to any amount not exceeding the value of the certificates of funded debt deposited with and transferred to him by such bank, as prescribed by the preceding section; but at no time shall the total amount of such notes delivered to any such bank exceed three times the amount at such time actually paid in on its capital stock, and remaining as capital stock undiminished by losses or otherwise.

§ 62. In order to furnish suitable notes for circulation to such independent banks, the Treasurer is hereby authorized and required to cause to be engraved and printed in the best manner to guard against counterfeiting, such quantity of circulating notes in the similitude of bank-notes, in blank, of the several denominations provided for in this act, as he may from time to time deem necessary to furnish to such independent banks, according to the provisions hereinafter set forth; which notes shall be countersigned, numbered, and registered in proper books, to be provided and kept for that purpose in the office of said Treasurer, under his direction, by such person or persons as he may appoint, so that each denomination of such circulating notes shall bear the uniform signature of one of such registers, and all the notes of each separate denomination shall bear the same device, and bear a general similitude; and the notes or bills to be so countersigned shall have stamped or printed on their face the words, "Secured by the pledge of stock."

§ 63. The plates, dies, and materials to be procured by the Tressurer of State for the printing and making the circulating notes provided for in the sixtieth section of this act, shall remain in the custody of said Treasurer and under his direction, and the expense necessarily incurred by him in executing the provisions of this act, shall be audited and settled by the Auditor of State, and paid out of any moneys in the treasury, not otherwise appropriated; and for the purpose of reimbursing the same to the treasury, the said Treasurer is hereby authorized and required to charge against, and receive from each bank receiving such circulating notes such rate per centum thereon as may be sufficient for that purpose, and shall, from time to time, equalize said expenses among the banks to whom such circulating notes

may be furnished.

§ 64. After any such independent bank shall have caused to be executed and signed by the president and cashier thereof, the circulating notes received from the Treasurer of State, in such manner as may be requisite to make them obligatory notes, payable on demand at its place of business, such bank is hereby authorized to issue and circulate

the same as money.

§ 65. It shall be the duty of the Treasurer of State to receive mutilated circulating notes issued by him to any of such independent banks, and to deliver in place thereof, other circulating notes to an equal amount; and the said mutilated notes, after an account shall have been entered in the proper book or books, shall be burned to ashes by the said Treasurer, in the presence of the Secretary of State, and the

officer or agent of said bank by whom the said notes shall have been delivered to the said Treasurer, and a certificate of said burning, signed by said Treasurer, shall be made in the books of the register, and a

duplicate thereof given to said agent.

§ 66. The Treasurer of State shall give to any company by whom any stock shall have been deposited according to the provisions of the fifty-eighth section of this act, powers of attorney to receive the interest or dividends thereon, which interest or dividend such bank may receive and apply to its own use; but such powers of attorney shall become void upon any such bank failing to redeem the circulating notes issued by such bank; provided, however, that whenever the price of any of the stocks pledged for the security or redemption of the circulating notes issued by any such bank, as aforesaid, shall be at the stock exchange, in the city of New-York, for four consecutive weeks, at a price or rate less than the value at which such stock shall have been estimated when so deposited and pledged; the Treasurer shall receive and retain the interest or dividend on such depreciated stock so pledged, until the interest so received, when added to the market value of stocks so pledged, to be ascertained as in this section before provided, will be equal in amount to the amount for which such stocks were pledged, he shall deposit the amount so received with any solvent bank in this State, at such rate of interest as shall be agreed upon, or, at the option of the bank by which such stocks were deposited, invest such interest or dividends, in any of the stocks by this act authorized to be pledged, in the name of the Treasurer of State, in trust for the bank by whom the stocks on which such interest or dividends may have accrued, shall have been pledged; and whenever the price of such depreciated stocks, at the New-York stock exchange, shall rise to the price at which they were pledged by the bank, and so remain for four consecutive weeks, such investments shall be assigned to such bank, and all accruing interest on such pledged stock shall thereafter be paid to such bank.

§ 67. The stocks transferred to the Treasurer of State by an independent bank, for the security of its circulating notes, shall be held by him exclusively for that purpose until such notes shall be redeemed,

except as hereinafter provided.

§ 68. If any such independent bank shall fail to redeem, in gold or silver coin, any of its circulating notes issued in pursuance of the provisions of this act, when payment thereof shall be lawfully demanded, during the usual hours of business, at the office of such bank, the holder of such note or notes may cause one or more thereof be protested by a notary public, who shall, on protesting the same, forthwith forward notice of such protest to the Treasurer of State; and after such protest suffered, it shall not be lawful for the bank thus suffering protest, to pay out any of its notes, discount any notes or bills, or otherwise continue in the business of banking, except to receive and safely keep moneys belonging to it, and to deliver special deposits; provided, however, that if satisfactory proof be produced to such notary public that the payment of any such note or notes is restrained or delayed by order of any court of competent jurisdiction, such notary public

shall not protest the same. Where the holder of such notes shall cause more than one to be protested on the same day, he shall not

receive pay for more than one such protest.

§ 69. In case any such independent bank shall fail to pay and redeem its circulating notes on demand, in gold or silver coin, as specified in the preceding section of this act, the Treasurer of State shall, within thirty days after he shall have received notice of such failure, cause the stock pledged by such bank, or so much thereof as may be necessary to redeem the outstanding circulating notes of such bank, to be sold either at the stock exchange, in the city of New-York, after giving notice of such sale to such bank, and also advertising the time and place of sale, with a pertinent description of the stocks to be offered for sale, in two or more newspapers published in the city of New-York, for not less than ten consecutive days before the day of sale, or at the State Treasury in the city of Columbus, giving notice to said bank, and also advertising in one or more newspapers published in the city of Columbus, and one or more newspapers in general circulation in the county, where the office of such failing bank is situated which advertisements shall contain same particulars as are required herein, where sales are to be made in the city of New-York and out of the proceeds of such sale the Treasurer shall pay in a ratable proportion on the circulating notes of such bank, of which due notice shall be given, calling upon the holders of such notes to present them for such payment at the State Treasury; provided, that if any of the circulating notes of such failing bank shall not be presented for redemption at the State Treasury until after the term of two years from the date of the first publication of the notice to the holders of such notes to present the same at the State Treasury, the Treasurer may pay ratably to the holders of the notes previously presented such notes shall not have been previously paid in full whatever of the proceeds of such sale remaining in his hands may be needed to fully discharge such notes so presented. Provided, that sales of stock under this section and section seventy shall not be made more rapidly than may be necessary to provide funds for the redemption of the notes of such bank, as they may be presented for redemption.

§ 70. The Treasurer of State may, if he shall deem that the interests of the note-holders of any insolvent bank will be best promoted thereby, with the advice of the Auditor and Secretary of State, hypothecate or sell, at private sale, any of the stocks transferred to and deposited with him by such bank to any other independent bank, or to any individual person or firm, and receive therefor either money or the circulating notes of such failing bank; provided, that no such stock shall be sold by private sale at less than the par value thereof, nor at less than the selling price at the New-York stock exchange at the date of the last received information, nor shall any such stock be sold

on credit.

§ 71. On receiving notice, that any such independent bank shall have committed an act of insolvency, as hereinbefore defined, the Treasurer of State, the Secretary of State, and the Auditor of State, or a majority of them, shall appoint a special agent, who shall immedi-

ately proceed to ascertain whether such bank has refused to pay its notes in gold and silver coin when lawfully demanded, and report to the said Treasurer, Secretary and Auditor, the facts so ascertained, and if from the report so made, said Treasurer, Secretary and Auditor, or a majority of them, shall be satisfied that such bank has suspended the payment of its circulating notes, when lawfully demanded, in gold and silver coin, they shall forthwith appoint a receiver or receivers, and require of him or them such bond and security as they shall deem proper, who shall proceed to take possession of the books, records, and assets of every description of such bank, collect all debts, dues, and other claims belonging to such bank; settle, and, with the approbation of an agent to be appointed by the stockholders for the protection of their interests, compound for all bad and doubtful debts: sell all the real and personal property of said bank, and to pay over all moneys so made to the Treasurer of State, and the Treasurer of State shall cause notice to be given by advertisement in one or more newspapers published in the city of Columbus, and also in one or more newspapers in general circulation in the county where the office of such insolvent bank shall be situated, for six consecutive months. calling on all persons, who may have claims against such bank, to make legal proof thereof; and after the end of one year from the first publication of such notice, the Treasurer, after full provision shall have been made for redeeming the circulating notes of such bank, shall make a ratable dividend of the moneys so paid over to him by such receiver or receivers, inclusive of moneys received by him on sales of stock transferred to and deposited with him by such bank on all such claims as may have been so proved; and from time to time. as the proceeds of the assets of said bank shall be paid over to him. the said Treasurer shall make further dividends, as aforesaid, on all claims previously proved, and the remainder, if any thing, shall be paid over to the stockholders of the bank or their legal representatives, in proportion to the stock by them severally held; provided, however, that if any independent bank, against which proceedings have been instituted as prescribed in this section, on account of any supposed act of insolvency, shall deny having committed such act, such bank may apply to any court of competent jurisdiction to enjoin further proceedings in the premises; and such court, after citing the Treasurer, Secretary and Auditor of State, to show cause why further proceedings should not be enjoined, and after the finding of a jury that such bank has not suspended the payment of its notes when legally presented, in gold and silver coin, shall make an order enjoining said Treasurer, Auditor, and Secretary of State, and any receiver or receivers appointed by them, from all further proceedings on account of such supposed act of insolvency.

§ 72. If the original capital stock of any such independent bank shall in any manner be diminished, or any portion thereof be withdrawn for any purpose whatever, while any debts or demands against such bank remain unsatisfied, no dividends shall thereafter be made on the shares of the capital stock of such bank until the original amount of the capital

stock shall be restored, either by contribution of the shareholders, or out of the profits of the business of such bank; and in case any dividend shall be made while the capital stock shall remain so diminished or withdrawn, it shall be the duty of any court having competent jurisdiction, to issue the necessary orders and decrees, for closing the affairs of such bank, and dividing its effects among its creditors and shareholders, as in this act provided.

§ 73. All fees for protesting the notes issued by any such independent bank shall be paid by the person procuring the protest to be made, and such bank shall be liable therefor, but no part of the stock pledged by such bank to the Treasurer shall be applied to the payment of such fees; and all expenses incurred in conducting the sale of any of such pledged stocks and advertisements thereof, shall be

paid out of the proceeds of such sales.

§ 74. The stockholders, collectively, of any independent bank, shall at no time be liable to such bank either as principal debtors or sure ties, or both, to an amount greater than three fifths of the amount of capital stock actually paid in and remaining undiminished, by losses or otherwise, nor shall the directors be so liable, except to such amount and in such manner, as shall be prescribed by the by-laws of such bank, adopted by its stockholders to regulate such liabilities, and it shall be the duty of the Auditor, Treasurer, and Secretary of State, or a majority of them, as often as once in each year, to appoint some suitable person, who shall not be a stockholder in any bank of this State, who shall have power to make a thorough examination into all the affairs of the bank which he may be appointed to examine, and in so doing to examine any of the officers and agents of such bank on oath; and such agent shall make a detailed report of the condition of such bank to the Auditor of State; and the banks organized under this act shall not be subject to any other visitorial powers than such as are authorized by this act, except such as are vested in the several courts of law and chancery; and every agent appointed, as in this section provided, shall receive for his services at the rate of four dollars for each day by him employed in such examination, and four dollars for every twenty-five miles he shall necessarily travel in the performance of his duty, which shall be paid by the Treasurer of State, and refunded by the banks, as other expenses are refunded.

§ 75. Whenever any independent bank, being desirous of diminishing the amount of its circulating notes, shall deliver to the Treasurer of State any portion of such notes not less in amount at any one time than five thousand dollars, to be destroyed, the Treasurer shall destroy the same as prescribed in section sixty-three, and shall thereupon transfer and deliver to such bank certificates of funded debt deposited with him by such bank to an amount equal to the amount of notes so delivered up; provided that the amount of such certificates remaining with the Treasurer shall not thereby be reduced below the amount of the capital stock of such bank at the time paid in, nor in any case below the sum of one hundred thousand dollars, nor in value, estimating the same at their then current price in the city of New-York, below the amount

of circulating notes still retained by such bank; nor shall the Treasurer be required to transfer such certificates in fractional sums of less than one thousand dollars; and whenever any such bank, being desirous of relinquishing its banking business, shall have paid at least ninety per cent of the maximum amount of its circulating notes, and shall have delivered the same to the Treasurer of State to be destroyed, and shall have provided means and given security to the satisfaction of the Treasurer, Secretary and Auditor of State, for the redemption of its outstanding notes of circulation, at the place where the office of such bank was established, and shall have given notice thereof by advertisement, for six consecutive months, in two newspapers of general circulation published at Columbus, and at least one published in the city, town, or village where the office of such bank is located; it shall be lawful for the Treasurer of State to re-transfer and deliver to such bank all the certificates of funded debt previously pledged with him by such bank, and thereupon all the corporate powers of such bank, except such as shall be necessary to close up its affairs, shall cease.

§ 76. This act shall be submitted to the electors of this State at the general election to be held on the second Tuesday of October next, for their approval or rejection—and each elector may have written or printed or partly written and partly printed upon his ticket the words "For the Bank Charter" or "Against the Bank Charter;" and the judges of each election district, in counting out the votes, shall set down in separate columns, in the poll-books, the votes given "For the Bank Charter" and the votes given "Against the Bank Charter," and certify the number of votes given for and against the Charter, as they are required to certify to the number of votes given for candi-

dates.

§ 77. It shall be the duty of the persons opening the poll-books in each county, to make a separate abstract of votes given for and against the charter, including a statement, showing the number of votes cast, which were neither given for or against the charter. And the Clerk of the Court of Common Pleas in each county, shall, immediately after such abstract is made, make a certified copy thereof, under the seal of the court, and forward the same by mail to the Governor, at Columbus, marked on the outside "Abstract of votes for and against Bank

Charter, given in ——— county."

§ 78. It shall be the duty of the Governor, as soon after said election as practicable, with the aid of the Auditor or Secretary of State, to open and abstract all said returns; and the Governor shall immediately thereafter, by proclamation in some newspaper published at Columbus, set forth the number of votes given for the charter, the number of votes given against the charter, and the number of votes given which were neither for nor against the charter; and if a majority of all the votes given were for the charter, he shall further state therein that said charter has been approved by the people, and has thereby become a law; but if a majority of all the votes given shall not be for the charter, he shall so state, and that the charter has, for that reason, failed to become a law.

§ 79. This act shall take effect and be in force from and after the second Thuesday in October next, if the same shall be approved by a majority of the electors voting on that day, and not otherwise.

N. H. VAN VORHES,

N. H. VAN VORHES,

Speaker of the House of Representatives.

LESTER TAYLOR,

President of the Senate, pro tem.

April 11, 1856.

Auditor's Office, Champaign Co., Urbana, May 14, 1856.

I hereby certify that the foregoing are correct copies, taken from the Ohio Statesman, of laws published by authority of the Secretary of State.

S. P. Talbot, Auditor.

### BANKS OF OHIO.

We have received from the Auditor of the State of Ohio the quarterly statement exhibiting the condition of the several incorporated banking institutions of that State on the first Monday of February, 1856, as shown by their returns made under oath to the Auditor of State, from which we have compiled the following table. There are eleven independent banks, the circulation of which is secured by Ohio and United States stocks deposited with the State Treasurer; thirteen free banks, whose circulation is secured by Ohio and United States stocks deposited with the State Auditor; forty-one branches of the State Bank, four of which have become insolvent, namely: the Akron Branch; the Commercial Branch, Toledo; the Licking County Branch, Newark; and the Mechanics & Traders' Branch, Cincinnati; and one withdrawn, the Franklin Branch, Cincinnati; and one old bank, the Ohio Life Insurance & Trust Company, with a paid-up capital of \$2,000,000.

The aggregate dividend for the year 1856, was \$809,918, being slightly over ten per cent on an average.

The capital of the Bank of Penn Township has lately been increased from \$225,000 to \$350,000.

GEORGIA.—The Bank of Commerce has been organized at Savannah, with a capital of \$300,000. Mr. G. B. Lamar is the President, and J. C. Ferrill, Cashier. The former was for many years the president of the Bank of the Republic in this city, and his name, as one skilled in financial affairs, will give great strength to the new institution. Mr. Ferrill was Teller of the Planters' Bank of Savannah.

The Mechanics' Bank made an extra dividend of 12½ per cent in October, 1854. The 5 per cent dividend of the Broadway Bank, (S. Boston,) was for the first nine months of its operation. The dividend of the Massachusetts Bank is 3½ per cent, which is given in the table as \$8 per share, (par \$250.)

As compared with October last, the Exchange increased one per cent, and the Shoe & Leather Dealers' one half. The Broadway, Commerce, Howard, North, and North-American, each one half per cent less. The Grocers' Bank was included in the October table, which about makes the difference between the total then and now.

### BANK ITEMS.

NEW-YORK.—The building occupied by the Fulton Bank, at the corner of Fulton and Pearl streets, for the past thirty-four years, is now in process of demolition, and will be succeeded by a spacious fire-proof edifice, with a front of fifty feet on Fulton, and the same on Pearl street, at a cost of about forty thousand dollars. The Bank, for the present, will transact business at the corner of Pearl and John streets.

THE Bank of the State of New-York removed on 1st May to their new and spacious building, corner of William street and Exchange Place.

THE Hanover Bank has removed from Hanover Square to No. 37 Nassau street, opposite the Post-Office.

The Mechanics' Bank removed on 1st May to their new building, 37 Wall street. A correct delineation of this building was given in our number for February last. The "Union Bank" building, No. 36 Wall street, is also in process of demolition, although spacious, substantial, and costly; but as it accommodated hitherto only the Bank itself and its officers, it will be superseded by a more modern structure, to furnish ample accommodations (as in the case of the Mechanics' Bank and others) on the first and other floors and basement, for insurance offices, brokers' offices. The new bank-buildings, constructed for the Bank of the Commonwealth, St. Nicholas Bank, Metropolitan, Bank of Republic, Mechanics', Bank of the State of New-York, Broadway Bank, Shoe & Leather Bank, and others, are constructed upon such principles that while they furnish ample space for the Bank itself, also provide rooms for other purposes, and thereby realize an interest of seven to ten per cent on the investments, severally.

Wall street.—The Bank of New-York will remove to-morrow to the rooms over the Bank of the State of New-York, on the corner of William street and Exchange Place, and adjoining the banking-house of M. Morgan & Sons.

MR. HALSEY, who has for many years served as Cashier of the Bank of New-York, has been recently elected Vice-President, and is succeeded as Cashier by William B. Meeker, Esq.

Mr. H. Dwight Williams, who was some time since elected Cashier of the Grocers' Bank of this city, has declined the appointment.

Clearing-House, New-York.—The application of the Park Bank for admission to the privileges of the Clearing-House, is now before the Special Committee on admission of new members, as provided by section seventeen of their Constitution, namely: "New members may be admitted into the Association at any meeting thereof. Such new members shall pay an admission-fee of one thousand dollars, and shall signify their assent to this Constitution in the same manner as the original members. But no new member shall be admitted, except by a vote of three fourths of those present"—(at the meeting when the vote is taken.) The Committee on Admission consists of the following gentlemen: Shepherd Knapp, of the Mechanics' Bank, Chairman; Frederick Deming, of the Union Bank; Jacob Aims, of the Butchers & Drovers'; John Clapp, of the Mechanics & Traders'; and John Q. Jones, of the Chemical Bank.

Lansingburgh.—The charter of the Bank of Lansingburgh expired on 1st July last, and was succeeded by a bank of the same name, and same stockholders, directors, and officers, and same amount of capital as before, (\$120,000.) On the 1st April last the capital was increased to \$150,000, the new stock having been subscribed at ten per cent premium. The former Bank was in existence forty-two years.

Bank Capital in New-York.—The capital of the Metropolitan Bank has been increased to \$3,000,000. That of the Shoe & Leather Bank will be increased to \$800,000; Nassau Bank, \$750,000; Market Bank, \$1,000,000.

BANK DIVIDENDS.—The bank dividends payable at New-York in May, and for previous periods in 1854 and 1855, were as follows:

| W                               | 18   | 54.— | 18   | 55   | 1856 |

VERMONT.—G. A. Burbank, Esq., has been elected Cashier of the Bank of Caledonia, Danville, in place of Samuel B. Mattocks, Esq., who is now Cashier of the Bank of Lyndon.

MARYLAND.—The Bank of Chestertown, at Chestertown, Kent county, Maryland, has commenced business under favorable auspices. President, George B. Westcott; Cashier, S. W. Spencer.

NORTH-CAROLINA.—Robinson White, Esq., was in April elected President of the Farmers' Bank at Elisabeth City, N. C.

NEW-ORLEANS.—Statement of the Banks of the city of New-Orleans for the week ending Saturday, May 10, 1856.

KENTUCKY.—At a meeting of the banks of Kentucky on the 26th of March, a resolution was adopted which is now for the first time published. It declares that no mutilated bank-note, having the appearance of having been fraudulently mutilated, shall be received elsewhere than at the Bank where it is payable; and that a note made up of pieces fraudulently taken from other notes, shall be treated as a nullity.

The intention of this resolution is to protect the community against impositions now frequently practised, and to which dealers in paper money ought to yield a ready assent.

<sup>\*</sup> The Broadway Bank will pay dividends hereafter in July and January.

New Banks.—In the Kentucky Senate, the bill to incorporate the Merchants' Bank of Kentucky, at Covington, was reported: the parent bank with a capital of \$1,000,000, and branches at Eddyville and Burksville, \$250,000 each. The bill was rejected by a vote of eighteen to thirteen. In the House of Representatives the bill to incorporate the Union Bank of Kentucky was reported: the parent bank to be located at Hopkinsville, with two branches, aggregate capital, \$500,000. This bill was finally rejected by a vote of fifty-eight to twenty-six. The charter of the Bank of Ashland was granted, with a capital of \$500,000. Ashland is located near the mouth of Big Sandy River, (the boundary between Kentucky and Virginia,) the eastern terminus of the Lexington and Big Sandy Railroad. Extensive iron and coal-mines and rolling-mills are within twelve miles of this place, which bids fair to become an important outlet for the export of the valuable (and apparently inexhaustible) mineral products of the eastern counties of Kentucky. The Bank will go into operation in July next. Mr. King, from the Committee on Banks, reported a bill supplemental to the act incorporating the Bank of Ashland; passed. Also, a bill supplemental to the act incorporating the People's Bank of Kentucky; passed.

[These bills require the officers and directors of the banks to be citizens of Kentucky; forbid the issuing of any bills or notes payable to bearer, except those payable at their own counters respectively; and require that all notes, etc., shall be redeemable at the place where they are issued.]

### Notes on the Money Market.

NEW-YORK, MAY 28, 1856.

Exchange on London, at Sixty Days' Sight, 91 a 91 Premium.

Since the publication of our last No. the money market in Wall street has been disturbed by various causes, mainly of a political nature, and of sufficient importance to depress, temporarily, the current values of stocks. Rumors were prevalent from day to day throughout the month, that the British minister at Washington would be dismissed, and fears were entertained that this would interrupt the friendly relations of the two governments. A decline in stocks was the immediate consequence, and a feverish feeling among operators of all classes. Towards the latter part of the month the tone of the market improved, in consequence of the conciliatory spirit of the last dispatches of the British ministry towards this government.

The actual dismissal of Mr. Crampton, the British minister at Washington, and of the three consuls who were implicated in the enlistment question, may interrupt for a time the friendly relations of the two governments: but nothing serious is anticipated. There is a substantially good feeling prevailing between the people of both countries—a feeling that has been acknowledged and confirmed in the official dispatches between the two governments.

There have been other causes of disturbance in the money market during the present month, all contributing to restrain the advance in stock values that would otherwise take place under the favorable aspect of commercial affairs, foreign and domestic. The principal cause of this nature, was the rumored acknowledgment, by this country, of the Rivas (or Walker) government in Nicaragua. It is conceded, however, that such grounds for distrust are slight, and that the good sense of the people of the United States will lead to a restoration of harmony in our foreign relations.

Aside from the complexion of political affairs this month, there are ample grounds for confidence in a progressive movement in the great interests of the country at large. In the manufacturing districts there is renewed activity, and an increasing demand for capital and labor. The market values of the leading agricultural products, are such as to guarantee ample profit to capital invested and labor employed in this branch of industry. The railroad companies throughout the East and West are pressed with business and yield, generally, liberal dividends.

The banks of this city have curtailed their business slightly since the middle of April, namely:

Money is abundant at 7 per cent on call, with ample stock collaterals. The rates for business paper are still very exorbitant, little being done in the street under 9 per cent.

State stocks are still selling at very low rates, and business has been mainly confined to limited transactions in Missouri and Virginia Sixes and California Seven per Centa, without important change in price. Louisiana is in good demand at improved prices. For nearly all other State stocks our quototions are nearly nominal. In Government Sixes few sales were reported at the board, but we learn of a few private transactions at our quoted rate. The bonds of Kentucky, Georgia, and North-Carolina upon the market are extremely limited, and are held at higher prices than those quoted by us. Operations in Indiana State bonds are mainly for banking purposes, and their values are well sustained. Our quotations, it will be observed, have been very uniform for two months past in State securities, as there is no speculation in them, and the transactions quite light.

We annex the prices at the close of the past seven weeks:

Fluctuations in railroad shares during the month have been unusually large. Circumstances tended to depress their values; but a marked improvement has followed, indicating increased confidence as to the favorable results of the business of our leading roads. As the dividend months approach, there are more buyers than sellers. We annex the closing rates for the past seven weeks:

The business of the N. Y. Central Co. indicates continued ability to maintain their eight per cent dividend. The company is well managed and the resources increasing. The receipts of the N. Y. & Erie R.R. Co. are also large, compared with former years. The revenue of the Reading R.R., early in the spring, was not as large as that of 1855, but it is thought that the aggregate receipts for the current year will be fully equal to the preceding, and enable the Company to maintain their ten per cent dividends. The business of the Michigan Central and Michigan Southern R.R. Co. is very large, and the financial condition of both improving rapidly, with assurance of ten per cent dividends from both. Cleveland & Toledo R.R. shares have fallen to extremely low rates. This is an eight per cent stock, and the business of the Company is as flattering as at any former period.

During the month there have been several grants of lands by Congress to aid the construction of railroads in the West. First, a grant of 4½ millions of acres to railroad companies in Iowa; a grant of 1,500,000 acres was also made in behalf of a railroad through Alabama. The House of Representatives passed, by a vote of 73 to 58, a bill appropriating 1,500,000 acres of Michigan lands in aid of railroads, in that State; and by a vote of 81 to 67, a liberal grant of lands for the construction of

<sup>\*</sup> Ex-dividend.

railrands in Whoonsin. These grants, it is supposed, will absorb about nine millions of acres, and are accompanied by an order from the Department at Washington to close the land offices near the routes proposed for these several roads, until the lands granted themshall be selected. With the aid of such liberal grants the railroads contemplated can be speedily constructed, and the interests of the several States named will be largely benefited thereby. For Florida and Alabama, the grant is for three roads and a branch, as follows: From Amelia Island to Tampa, with a branch to Cedar Key; from Jacksonville, on the St. John's River, via Tallahassee, to Assambia Bsy; and from Pensacola to Montgomery, Alabama—making, by estimate, an aggregate of seven hundred and fifty miles of railroad, which, when completed, will enable the State of Florida, with the ocean-bound coast, to compare favorably with any of her sister States as regards her facilities of communication.

In railroad bonds the sales during the month have continued active, with a moderate demand only from Europe. The excitement arising from the default of the Cleveland, Columbus & Cincinnati R.R. Co., in the payment of bonds guaranteed by the Company, has somewhat subsided; but the effects of this measure will long be felt. There will be hereafter more circumspection used in the orders for, and purchase of American railroad securities by foreign capitalists. Such shares and bonds as are well known and appreciated in this market will find orders abroad during the present year.

Letters received during the month from banking firms on the Continent of Europe, state that the default in the payment of coupons guaranteed by the Cleveland, Columbus & Cincinnati Railroad Company on 1st March, and before noticed in our last No., has been productive of serious damage to the standing of American railroad securities held or offered abroad. Unfortunately, the sound and substantial are injuriously affected in common with the weaker ones—the foreign espitalist, with limited sources of information as to the actual values of American securities generally, is thus compelled to forego investments for the time being; and in order to avoid unnecessary risk in the purchases of questionable shares and bonds, he declines all purchases, and confines himself to these at home free from the stain of repudication.

The result upon our own market is temporarily injurious; but we feel confident that two or three months only will suffice to reëstablish our railroad system in public credit, and to place the substantial works now in operation again in public favor. The country has never at any moment furnished a better prospect for well-established railroads. This prospect must become more flattering from year to year, according to the greater development of mineral and agricultural resources, increased population, and more economical modes of working the roads.

Looking at them as investments by capitalists, there are certain leading roads that offer the best inducements to purchase. It is, we conceive, next to impossible for any retrograde movement or condition to occur in the working of those roads that have for one, or two, or three years past paid punctually their semi-annual dividends. The receipts of the Reading Railroad, the Michigan Contral, Michigan Southern, Cleveland & Toledo, Cleveland & Pittsburgh Railroad, and of the Illinois roads generally, cannot be less for 1856, than in 1855, and will probably be one third larger. With equal revenue, which is unquestionable, and with less working expenses, as has been ascertained, these roads must pay as well this year as in former years. We advert to this because some fears have been expressed in certain quarters, that the business of the year will be less productive—more especially that of the Reading Railroad—than heretofore. The correspondence that has lately taken place between the president of the road and the committee of the coal trade of Schuylkill county, in reference to the tonnage on coal, will demonstrate that even if the aggregate transportation for the year be less than last year, the revenue will exceed it. Coal is a more essential article of commerce in this latitude than flour. For the latter there are various substitutes at command which would, in the case of short crops of wheat, remedy the evil. For the former, as fuel, there is no substitute, while the demand and consumption are increasing in a ratio far greater than that of the population. Its value for steam navigation being fully established, we find on the other hand, that for railroad engines it is fast superseding wood. The unerring law of supply and demand the certain result of increased prices to follow diminished supply, (commensurate with our wants,) indicate that the Reading Railroad Company, availing themselves of these new circumstances, will advance their rates of toll. The rates are already more than remunerative, and will shortly become more so to the Company, The committee, in their letter, suggest that purchasers are kept back by the impression that lower prices will result from a change of freights or tolls by the carrying companies. They, therefore, ask the Reading Railroad and the canal managers to fix their commissions at once, in order to remove the uncertainty which is now causing the large orders of consers to be withheld. Mr. Tucker replies that the trade may rest assured that the minimum freight on the road has already been reached, and that the charges for the remainder of the season will be higher rates.

No better guarantee of liberal dividends by our leading roads is required than the monthly official list of revenues. The receipts for the various roads for April, as far as published, are:

Some few of our American railway bonds were marked on the London Stock Exchange, on Tuesday, May 13, at an advance of 1 a 1½ per cent from the quotations of the previous week, though no actual business is reported, except in Illinois Central shares, at 18 sterling, equal to 19.80 federal currency. The Construction Bonds are quoted 80½ a 81½; Eric Thirds, 85½; Free Lands, 85; New-York Central Sevens, 95; and New-York Central Sixes, 81, ex-dividend.

The present year will show an immense yield in our great staple, cotton. The receipts since the 1st of September, 1855, at the leading ports, have already reached about 3,300,000 bales, and it is probable that about 200,000 more will be received before the close of the season, three months more. Assuming the total to amount to the aggregate of 3,500,000 bales, the distribution may safely be estimated as follows: The United States last year required 600,000 bales, and the present year will require 700,000 bales, while it is estimated that

|                      | cl'd to May 2      |  |
|----------------------|--------------------|--|
| France will take,    | 443,000<br>287,000 |  |
| Other foreign ports, | 205,000            |  |
| Total,               | 885,000            |  |
| Total,               | 1,570,538          |  |

Out of this crop of 3,500,000 bales, about 200,000 bales are estimated to have been the growth of the previous season, and kept back by the low stages of water in the Southern rivers. The navigable condition of the Southern streams up to the present time, has enabled the growers to send all their supplies to market, they being also urged to do so by the stimulus of high prices. The restoration of peace in Europe has already given a fresh stimulus to the foreign demand for cotton for their manufacturing districts; while the home demand is steadily increasing. The steady sales in the Liverpool and continental markets have a good effect upon the market here, and give a favorable tone to money matters. Up to the 21st May, the receipts at New-Orleans since 1st September, (exclusive of the arrivals from Mobile, Florida, and Texas,) are 1,641,561 bales, against 1,122,894 bales to same date last year; and the increase in the receipts at all the ports, up to the latest dates as compared with last year, is 884,215 bales. In the exports from the United States to foreign countries, as compared with same dates last year, there is an increase of 384,472 bales to Great Britain; 73,438 to France, and 225,063 to other foreign ports.

The yield for the year is not only a great one as regards quantities, but prices are also favorable, the following being the comparative prices of cotton in the month of May in the following years:

|                            | 1856.       | 1855.    | 1854.    |
|----------------------------|-------------|----------|----------|
| Inferior,                  | 61 a •71 .  | . a      | 4 a 5    |
| Ordinary to Good Ordinary, | 8 a 91      | 81 a 81  | 51 a 61  |
| Low Middling,              | 94 a 97     | 91 a 10  | 7 a 71   |

| Stock on hand, 410,000                  | <b>265,000</b> | 547,000   | 417,000       |

We have advices from London to the 16th inst., showing a marked improvement in financial affairs. The new loan of £5,000,000 for the British Government, it was announced, would be all that the Treasury require for the current year beyond the ordinary revenues. It is gratifying to observe that since the commencement of the year, the British consols have risen no less than 7 per cent. Month after month the funds have continued rising. Before the war, consols, on an average were 98 or 97, and reached par in the year 1854; while the war lasted they were considerably below that mark, and now that it is over, they are steadily going up again, and will probably reach par before the close of the year; so that consols will continue to prove attractive as a speculative investment.

QUOTED MONEY PRICES OF CONSOLS AT THE CLOSE OF EACH WEEK WITHIN THE PRESENT YEAR.

On the Continent the change is still greater. The Bank of France had reduced the rate of interest one half per cent. The French funds continue to advance rapidly, particularly the railways and Credit bank shares. Since the first agitation of peace preliminaries, early in January, the rise on several descriptions has been as follows:

|                            | Jan. 12. | May 12. |
|----------------------------|----------|---------|
| Three per Cents,           | 61.80    | 75.80   |
| Four-and-a-half per Cents, |          | 94.80   |
| Bank of France,            |          | 39.50   |
| Credit Mobilier,           |          | 18.60   |

### GENERAL INDEX

TO THE

TENTH VOLUME (OR FIFTH VOLUME—NEW SERIES)

OF THE

### Bankers' Magazine and Statistical Register,

FROM

JULY, 1855, TO JUNE, 1856, BOTH INCLUSIVE.

Complete copies of the present volume can be supplied by the publisher, to order. Price, in numbers, \$5; or substantially bound, \$5.75. Separato Nos. will be furnished to subscribers for the completion of their volumes. Bound copies will be supplied in exchange for the Nos. All orders to be addressed, by mail, to J. Smith Homans, No. 162 Pearl street, New-York.
